FULL DETAILS OF PROPOSED PLAN OF WORK
(FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS)

After drilling to a total depth of 11,375' in the Mississippian, we decided to plug back to approximately 9525' and try for completion in the Wolfcamp formation. A 7" O.D. liner will be run and cemented at 9525' with an overlap in the 9 5/8" casing of approximately 150 feet. The casing and liner will be tested with 1000 p.s.i. for 30 minutes and if it holds we will perforate and complete the well. If the casing and liner will not hold the pressure, corrective steps will be taken before perforating to complete the well.
