Detailed account of work done, nature and quantity of materials used and results obtained.

A cement plug of 10 sacks was dumped on top of a Calceal plug at depth of 3866' to cover perforations in 5 1/2" casing between depths of 3843' and 3852'. 5 1/2" casing was then shot off at 2800' after hole had been filled with mud. A cement plug of 20 sacks was then set at point where casing was shot off. A cement plug of 20 sacks was set at base of 8-5/8" casing at depth of 365'. Cement was circulated around 8-5/8" casing at time well was drilled. No attempt was made, therefore, to pull any of this string. A cement plug of 3 sacks was set at surface and a 4" marker; as per regulations; was set in this cement. A steel plate was welded on top of the 4" marker and the well owner; lease name; well number; and location was stamped on top of this plate.

Burn pit has been backfilled and location site cleared as per regulations.
