Well No. 2 is located 2310 ft. from ~~XXXXXX~~ [S] line and 990 ft. from [E] line of sec. 29

NE/4 SE/4 Sec. 29 23-S 37-E NMPM  
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)  
NMFU Lea New Mexico  
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3310 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On recent test, February 25, 1963, Stewart 29 No. 2 flowed 1 BO, no wtr, w/1 MCF gas thru a 45/64" chk.

We propose to plugback and recomplete this well in the Jalmat gas zone. We plan to accomplish this in the following manner. Run CR Neutron log; run CIBP and set at 3450' capped w/2 sacks cement; perforate approximately 50' in the Yates-Seven Rivers as indicated from above log; sandfrac with 20,000 gals of gelled water and 20,000 lbs sand using 80 ball sealers; swab, test & place on production.

A subsequent report will be filed upon completion of this work.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

\* Subject to:

The setting of a bridge plug does not constitute permanent abandonment of the lower perforations. Should conditions warrant, at the time of permanent abandonment, the bridge plug must be drilled out and cement placed across all perforations.
