APPLICATION FOR POOL AND LEASE COMMINGLE, OFF-LEASE MEASUREMENT, SALES AND STORAGE

Commingle proposal for oil production at Sand Dunes South Corridor Facility Train #1

OXY USA INC requests to amend PLC-552A for oil production at the Sand Dunes South Corridor Facility (B 18 T24S R31E) Train #1. Nimitz MDP1 13_1 Fed Com 1H, 171H, 172H, 173H, 311H, 312H, Gila 12 Federal 2H, Nimitz 12 Federal 3H, 4H and 5H will be added to Train #1. This will supersede PLC 454 for the Gila 12 and Nimitz 12 wells. In addition, Nimitz MDP1 13 Fed Com 1H (30-015-44524) has been plugged and is being removed from the commingle permit.

OXY USA INC requests to create a separate commingle permit for Train #1 wells. Train #2 and Train #3 wells will remain on PLC-552A. There are not any wells being added or deleted at Train #2 or Train #3, so the process flow for those trains remains the same as the existing Order.

Wells feeding the Sand Dunes South Corridor Facility Train #1 are listed below.

This commingle permit request includes the existing and future wells of the leases/CAs and pools listed below.

Process Description:

Sand Dunes Battery Train #1 has two 10' X 40' three-phase production separators with turbine meters for oil and water and orifice meters for gas.

After separation, the oil stream flows through a dedicated heater treater, vertical recovery tower and LACT units. The aforementioned LACT units serve as the oil FMPs. The existing tanks will remain onsite and are incorporated into the design as emergency backup storage in the event of system upsets and power outages.

Oil production is allocated back to each well from the train's oil LACT (FMP) based on well test. For testing purposes, Train #1 is equipped with eight 6' x 20' three-phase test separators. Each test vessel is equipped with an oil turbine meter, gas orifice meter and water turbine meter.

The new Nimitz wells will be tested daily prior to Range 1 of decline and will be tested at least three times per month during Range 1 of decline. When Range 2 decline is started, the wells will be tested at least twice per month. Wells will be tested at least once per month when Range 3 of decline is started.

The Jeff Smith wells have been online for 8 months and are in Range 2 of decline. They will be tested at the aforementioned frequency schedule. All other wells in Train #1 have been online for over 2 years and are in Range 3. They will be tested at least once per month.

The gas orifice meters on each production and test separator continuously measure and serve as the BLM gas FMPs. Gas is combined after being measured at the gas FMPs and flows through a gas scrubber then is sent to sales. Gas production is allocated back to each well based on the aforementioned well tests. Gas commingling is handled through PLC 749C.

All water generated at the facility is sent to the Sand Dunes SWD Integration System.

Additional Application Components:

The flow of production is shown in detail on the enclosed facility diagram. Also enclosed is a map detailing the lease boundaries, well and battery locations.

The oil and gas meters will be calibrated on a regular basis per API, NMOCD and BLM specifications.

Pursuant to Statewide rule 19.15.12.10(C)(4)(g) OXY USA INC requests the option to include additional pools or leases within the defined parameters set forth in the Order for future additions.

Commingling will not reduce the individual wells' production value or otherwise adversely affect the interest owners. It is the most effective means of producing the reserves.

The surface commingle application will be submitted separately for approval per NMOCD and BLM regulations.

OXY USA INC understands the requested approval will not constitute the granting of any right-of-way or construction rights not granted by the lease instrument.
