Good Day

Thank you for the email. Please proceed with your revised perforation interval based upon the actual formation tops encountered. Your permit will remain in good standing. Please submit a C-105 as part of the end of well package with a listing of the actual formation tops / depths encountered.

Subject: WaterBridge - Permit Modification - SWD-2494 - Long Shot SWD 1
Importance: High

Dear NMOCD UIC Group,

While drilling the WaterBridge Long Shot SWD #1, we encountered a difference in the anticipated vs actual formation tops. As established within our UIC permit (SWD-2494 I.H.4(a)Vi), we are requesting a minor permit modification to correct the actual injection interval, within the approved formation (Cisco).

During drilling we identified the top of the Cisco as 8,240'. As shown in the attached log snip, we request that our permit be modified to reflect an approved injection interval within the Cisco of 8,240' to 8,928' (TD of well). Approval of this minor modification will not affect the approved confining zone, change the injection formation or result in any additional regulatorily required notices.

As this well is currently being completed with a desire to bring it online as soon as possible, we respectfully request an expedited review of this request. To that end, please do not hesitate to reach out to me directly with any questions or requests for additional information.

Thanks,

Erick A. Rodríguez
