EXAMINER HEARING

IN THE MATTER OF:

Application of Atlantic Richfield Company  
for a unit agreement, Eddy County,  
New Mexico

Case No. 4952

IN THE MATTER OF:

Application of Atlantic Richfield Company  
for a pressure maintenance project, Eddy  
County, New Mexico

Case No. 4953

BEFORE: Richard L. Stamets

TRANSCRIPT OF HEARING

dearnley, meier &amp; mc cormick

209 SIMMS BLDG. • P.O. BOX 1092 • PHONE 243-6691 • ALBUQUERQUE, NEW MEXICO 87103  
1216 FIRST NATIONAL BANK BLDG. EAST • ALBUQUERQUE, NEW MEXICO 87108

1 MR. STAMETS: The hearing will come to order, please.  
2 We will take next Case 4952; and I believe that will be  
3 consolidated with Case 4953 for testimony.

4 MR. CARR: Case 4952, Application of Atlantic Richfield  
5 Company for a unit agreement, Eddy County, New Mexico. And  
6 Case 4952, application of Atlantic Richfield Company for a  
7 pressure maintenance project, Eddy County, New Mexico.

8 MR. STAMETS: I'd like to call for appearances in these  
9 two cases. Mr. Hinkle, the cases are consolidated on your  
10 recommendation.

11 MR. HINKLE: Clarence Hinkle, Hinkle, Rondurant, Cox &  
12 Eaton, appearing on behalf of Atlantic Richfield.

13 MR. STAMETS: Other appearances, please.

14 MR. LANDIS: Bruce Landis appearing on behalf of  
15 Amoco Production Company.

16 MR. LOSEE: F. A. Losee appearing on behalf of Yates  
17 Petroleum Corporation and the various interests.

18 MR. MORRIS: Richard Morris of Montgomery, Federici,  
19 Andrews, Hannahs, & Morris of Santa Fe, appearing on behalf  
20 of Signal Oil and Gas Company.

21 MR. STAMETS: Are there any other appearances in this  
22 case?

23 MR. KELLAHIN: Jason Kellahin, Kellahin & Fox of Santa  
24 Fe appearing for Cities Service Oil Company, Samedan Oil  
25 Corporation, Penroc Oil Corporation, and C & K Petroleum, Inc.

1 Fred Turner and V.P. Shelton.

2 MR. STAMETS: At this point I would like that all  
3 witnesses and prospective witnesses stand and be sworn at one  
4 time. This should save us quite a bit of time.

5 (Whereupon, the witnesses were sworn.)

6 MR. HINKLE: Mr. Examiner, we have two witnesses and  
7 12 exhibits. This is the official marked copy and here is one  
8 other copy for the attorney. We have two extra copies if any-  
9 body wants them.

10 BILL EMBRY

11 previously sworn as a witness, testified as follows:

12 DIRECT EXAMINATION

13 BY MR. HINKLE:

14 Q Would you state your name, your residence, and by whom you  
15 are employed?

16 A Bill Embry. I work for Atlantic Richfield in Midland,  
17 Texas.

18 Q What is your position with Atlantic Richfield?

19 A I'm land man.

20 Q Are you familiar with the Empire-Abo proposed unit area?

21 A Yes, sir.

22 Q What has been your position with the company with respect to  
23 this unit?

24 A Well, I'm a land man; and I prepared the agreements for the  
25 final drafts and for final mailing to the working-interest

1 owners and the royalty owners. And then I was concerned  
2 primarily with the royalty sign up and the working-interest  
3 owner's sign up.

4 MR. KELLAHIN: Could the witness speak up a little  
5 louder, please?

6 Q So it's been your duty to try to get the unit agreement  
7 signed up by the working-interest owners and royalty  
8 owners?

9 A Yes, sir.

10 Q Have you prepared or has there been prepared under your  
11 direction certain exhibits for introduction in this case?

12 A Yes, sir.

13 Q And they are exhibits which have been marked exhibits 1  
14 through 3?

15 A Right.

16 MR. STAMETS: Mr. Embry, I'm sure that they can't  
17 hear you in the back row there. It is necessary to speak up  
18 quite a bit in this room.

19 Q Refer to exhibit number 1.

20 MR. STAMETS: One thing I'm not clear on, Mr. Embry.  
21 You have been a land man with Atlantic Richfield for a number  
22 of years?

23 THE WITNESS: Fifteen.

24 MR. STAMETS: Fifteen years. And you will be testifying  
25 in your expert capacity as a land man?

1 MR. HINKLE: No, I don't think it is necessary that he  
2 qualify as an expert. He's just in the land department of  
3 Atlantic Richfield. His duties have been in connection with  
4 this unit to get signed up.

5 MR. STAMETS: Okay. In that limited area then, we will  
6 accept his qualifications.

7 Q Refer to Exhibit 1 and explain what this is and what it  
8 shows.

9 A Exhibit 1 is a plat showing the outline of the unit area.  
10 It's the same plat that is Exhibit A attached to the Unit  
11 Agreement. The plat shows all the tracts in the unit. It  
12 shows the tract number, all the Abo wells. The federal  
13 acreage is cross-hatched and the state is white.

14 That's all federal and state acreage. The total acres  
15 in the unit are 11,339.15. The federal lands comprised  
16 36.91 per cent of the unit area being 4,184 acres. The  
17 state lands are 63 per cent of the unit area and comprised  
18 7,154 acres.

19 Q Does this exhibit show all the wells which have been  
20 completed in the Empire-Abo pool?

21 A Yes, sir.

22 Q It also shows the acreage ownership?

23 A Yes, sir. It shows the lease ownership.

24 Q Lease ownership. Now, refer to Exhibit 2 and explain what  
25 this is and what it shows.

1 A Exhibit 2 is a letter from the United States Department  
2 of Interior Geological Survey from Washington signed by  
3 the acting director which designates the area shown on  
4 Exhibit 1 as logically suitable for a unitization.  
5 Q Does this also indicate that they approved a form of Unit  
6 Agreement?  
7 A Yes, sir. It does.  
8 Q And also concur in the supervisor's recommendation as to  
9 the basis of allocating the unitized production?  
10 A Yes, sir.  
11 Q That's provided for in the Unit Agreement; is it not?  
12 A Yes, sir.  
13 Q Now, refer to Exhibit 3 and explain what this is.  
14 A Exhibit 3 is a letter from the office of the Commissioner  
15 of Public Lands wherein as stated the commissioner  
16 approved the unit as to form and content.  
17 Q And this is dated August 30, 1972?  
18 A Yes, sir.  
19 Q Are you familiar with the proposed Unit Agreement?  
20 A Yes, sir.  
21 Q Is Atlantic Richfield designated as the unit operator?  
22 A Atlantic Richfield is the operator.  
23 Q Does the Unit Agreement cover all formations or is it  
24 just limited to a particular formation?  
25 A The Unit Agreement is limited to the Abo formation as

1 defined in Section 2-H of the Unit Agreement.

2 Q You might refer to that and state briefly what that  
3 formation consists of, how it's defined.

4 A The unitized formation refers to the Abo formation which  
5 is a continuous stratigraphic interval occurring between  
6 the base of the Drinkard formation and the top of the  
7 Wolfcamp formation and which is the same formation that  
8 was encountered between the logged depths of 5,325 feet  
9 and 6,533 feet in Amoco Production Company's State of  
10 New Mexico AU Number 1 Well.

11 Q Now, is this agreement in substantially the same form  
12 as heretofore approved by the Commission where Federal  
13 and State lands are involved?

14 A Yes, sir.

15 Q And where it's for secondary recovery or pressure  
16 maintenance purposes?

17 A Yes, sir. It is.

18 Q Now, have you invited or have Atlantic Richfield invited  
19 all the owners of working-interests and overriding  
20 royalty and other interests to commit their interest to  
21 the Unit Agreement?

22 A Yes, sir. We have.

23 Q What is the preference status of the unit with respect to  
24 commitment of acreage? You can refer to Exhibit Number 1.

25 A On Exhibit 1 we show in green 21 tracts the owners of which

1 have indicated to us that they probably won't join this  
2 unit. Now, this area comprises of approximately 840 acres  
3 and would be 7 per cent of the unit area.

4 Q When you refer to 21 tracts, you mean 21 40 acre tracts?

5 A Right. Actually 16 unit tracts.

6 Q 16 unit tracts but 21 40 acre tracts?

7 A Right.

8 Q These are the only ones who have definitely refused so far  
9 to commit their interests to the unit?

10 A To the best of my knowledge.

11 Q What do you anticipate with respect to all of the other  
12 owners?

13 A We expect all of the other tracts in the unit area to come  
14 in sooner or later. They are expected.

15 Q What percentage would that constitute?

16 A That would be 93 per cent.

17 MR. HINKLE: I'd like to offer into evidence exhibits  
18 1 through 3.

19 MR. STAMETS: Are there any objections to the  
20 introduction of these exhibits? They will be admitted into  
21 evidence.

22 MR. HINKLE: That's all the direct of this witness.

23 MR. STAMETS: Are there questions of this witness?

24 MR. MORRIS: Mr. Examiner.

25 MR. STAMETS: Mr. Morris?

1 MR. MORRIS: Mr. Hinkle, would it be appropriate for  
2 me to ask questions of this witness concerning the formula?

3 MR. HINKLE: No. I should have stated there that our  
4 next witness will go into the formula and the operating aspects  
5 of it.

6 MR. MORRIS: I have no questions.

7 MR. KELLAHIN: Mr. Examiner, I just have one question.

8 CROSS-EXAMINATION

9 BY MR. KELLAHIN:

10 Q How much of the unit has presently been signed up?

11 A 85.4 per cent.

12 Q Is that an acreage figure?

13 A It's a unit Phase 1 figure, working-interest figure.

14 Q 85.40, did you say?

15 A 85.4.

16 Q And of that what percentage is owned by Arco?

17 MR. HINKLE: By who?

18 Q Atlantic Richfield?

19 A Our interest in the unit.

20 Q Of 85.4 per cent or your interest in the unit?

21 A Well, it would be our interest in the unit, 31 per cent.

22 Q What is the interest of the Amoco?

23 A Let me look. I better get exact. Amoco's interest is  
24 30.38392. Atlantic's interest is 33.143.

25 MR. KELLAHIN: Thank you.

CROSS-EXAMINATION

2 BY MR. STAMETS:

3 Q Mr. Embry, on the second page of Exhibit number 2 there  
4 seems to be some indication by U. S. G. S. that they thought  
5 at that time you did not have sufficient commitment. Let's  
6 see. "However, the right is reserved to deny approval of  
7 any executed agreement that, in our opinion, does not have  
8 full commitment of sufficient lands to afford effective  
9 control of operations in the unit area." Do you know if  
10 85.4 per cent will be sufficient in the eyes of the  
11 U. S. G. S.?

12 A Well, that's a determination that will have to be made by  
13 the U. S. G. S., that my personal opinion if you want that--

14 Q So to your knowledge it's not been made at this time?

15 A I beg your pardon?

16 Q That decision has not been made at this time?

17 A No.

18 MR. HINKLE: I might say in that connection, this is  
19 the way that all of these letters are written by the U. S. G. S.,  
20 because the regulations provide that they will only approve the  
21 Unit Agreement where sufficient acreage has been committed to  
22 give effective control. So this is a determination which has  
23 to be made by the U. S. G. S. and also by the Commission of  
24 Public Lands when the unit is filed for final approval.

25 Now, the fact that they only have 84.4 per cent signed at  
~~the present time doesn't mean that's all they are going to get~~

1 before they submit it for approval. It's not necessary, as we  
2 see it, to have any particular percentage signed up before the  
3 Oil Conservation Commission can approve it or approve the  
4 injection of gas.

5 MR. STAMETS: Are there any other questions of the  
6 witness? He may be excused.

7 S. U. CHRISTIANSON

8 having been previously sworn testified as follows:

9 DIRECT EXAMINATION

10 BY MR. HINKLE:

11 Q State your name and your residence and by whom you are  
12 employed.

13 A S. U. Christianson. I reside in Midland, Texas; and I am  
14 employed at Atlantic Richfield Company.

15 Q Are you a petroleum engineer?

16 A Yes, sir. I am. A particular title at the present time  
17 is Senior Analytical Engineer.

18 Q Have you previously testified before the Commission?

19 A No, sir. I have not.

20 Q State briefly your educational background and experience as  
21 a petroleum engineer.

22 A 1954 I received a degree, Bachelor of Science in Petroleum  
23 Engineering with the Reservoir Engineering Option from the  
24 University of Houston. The previous year in 1953 I had  
25 received a Bachelor's Degree in Geology from the University

1 of Houston.

2 In 1954 I was employed at Atlantic Refining Company,  
3 predecessor to Arco in Midland, Texas, as a junior reservoir  
4 engineer working with the Permian Basin Fields and  
5 Reservoirs. In 1958 I moved to Tulsa, Oklahoma where I  
6 was working with Midcontinent Fields and Reservoirs  
7 primarily in Oklahoma, Kansas, and Texas during this period  
8 of time, and the next few years in Oklahoma City and  
9 Amarillo and partially in Denver later.

10 I was working primarily with Colorado, Kansas,  
11 Oklahoma, Texas Panhandle. My duties were primarily, well,  
12 you name it. Development, drilling, gas and oil wells,  
13 reservoir studies of all types for all types of secondary  
14 and primarily projects. During this period of time I  
15 testified before the Commissions of Kansas, Oklahoma, and  
16 the Railroad Commission of Texas.

17 In '65 I moved to Denver, was there for two years.  
18 1967 I was transferred to Roswell, New Mexico, specifically  
19 for the purpose of beginning a reservoir study on the  
20 Empire-Abo Reservoir which would lead to eventual  
21 unitization of this reservoir.

22 Q Have you continued your studies since 1967?

23 A That is correct.

24 MR. HINKLE: Are the qualifications of the witness  
25 acceptable?

1 MR. STAMETS: They are.

2 Q Now, have you prepared or has there been prepared under  
3 your direction certain exhibits for introduction in this  
4 case?

5 A Yes, sir. There has.

6 Q And they have been marked Exhibits 4 through 12?

7 A That's correct.

8 Q Refer to Exhibit 4 and explain what this is and what it  
9 shows.

10 A Exhibit 4 happens to be a map of the Empire-Abo pool  
11 contoured on the top of the Abo porous reef. The subsea  
12 contours are shown. You can readily see by looking off to  
13 the southwest that probably the structurally highest well  
14 in the field is the Malco Federal Number 8 which happens to  
15 be located in the northwest quarter of the southeast  
16 quarter of 9, 18 South, 27 East, at the top of the Abo  
17 reef at minus 1621 feet subsea, as you can see there.

18 From this point, the crest of the reef can be followed  
19 around dipping at about 1 degree. Approximately miles east  
20 of that point, the crest of the reef dips below water-oil  
21 contact in the Abo formation which was determined by  
22 the engineering committee to minus 2665 feet subsea. The  
23 heavy dashed line is the unit area which was approved by  
24 USGS as being a proper area for unitization of the Abo  
25 formation.

1           The dashed line most easily seen on the north side  
2           is the engineering committee's determination of the zero  
3           net pay in the Abo reefs.

4   Q   Now, refer to exhibit 5 and explain what this is.

5   A   Exhibit 5 is a plot of the various production variables  
6           normally plotted for any reservoir versus with the variables  
7           themselves plotted on the vertical scale and time encountered  
8           being on the horizontal scale with the production increments.  
9           Actually the most, as you can see by looking at the example,  
10          the most important figure to the income as related to it  
11          is the daily oil rate. And this is the heavy curve down  
12          here which happens to be labeled "Daily Oil" strangely  
13          enough.

14               And as you can see, back during the low allowables  
15               in the middle '60's that rate for the entire, this is for  
16               the entire Abo, Empire-Abo pool as it says on the top,  
17               this rate was kicking along at 15 to 16,000 barrels a day.

18   Q   The numbers are in the thousands, are they?

19   A   Right. I'm sorry. The vertical scale on the left is in  
20          thousands per day. So you can see that, for example, this  
21          15 over here on the left means 15 thousand barrels per day.  
22          And the 20 means 20 thousands. And there by each individual  
23          line division between 15 and 20 would represent a thousand  
24          barrels a day of production. So as I was saying, you  
25          kick along here; and, of course, this field has been a

1 field that has had a great deal more capacity than the  
2 allowables. And as you can see in the middle '60's 15 to  
3 16 thousand barrels a day and the market demand began to  
4 pick up.

5 The Commission upped the New Mexico Allowables. You  
6 can see the Empire-Abo's rate going right up. If you  
7 plot an allowable curve to the state of New Mexico, it will  
8 be parallel to this thing right here. Moving on out to  
9 current times, I might say that just happened at the time  
10 we plotted this curve. We didn't have January's data.  
11 The curve shows that we are, I'm still on the oil rate  
12 curve. It shows that we are producing at the end of the  
13 year 1972 approximately 25,500 barrels per day from the pool  
14 as a whole.

15 Moving up one curve, you find that cumulative oil  
16 curve. This is the increased oil production in the  
17 original first production back in November, 1957, to  
18 1-1-72. And you see that as, I mean, 1-1-73. And you see  
19 as of 1-1-73 approximately 89.5 million barrels of oil had  
20 been produced from the reservoir.

21 Q Do you have any later figures on that?

22 A Well, we do have January which, you might imagine, is about  
23 the same as December. Allowable stayed the same. It's  
24 25,625 barrels of oil per day. I might mention the water  
25 at this time is plotted on the low slide line down toward

1           bottom, daily water production, so labeled.

2           And in January that production is 25,236 barrels of  
3           water per day which amounts to about 9 per cent of the  
4           water-oil combined production. That amount of production  
5           to 2-1-73 represents 23.4 per cent of the original oil in  
6           place.

7           Moving up to the next curve of cumulative gas, you see  
8           that along with this oil production we have had gas  
9           production, of course. And our cumulative gas production  
10          as of the end of '73 is 113 billion cubic feet. The curve  
11          on the white is in, well, it's again, it's in millions of  
12          barrels of oil for the cumulative. And it is in billions  
13          of cubic feet for the gas cumulative. So we have produced  
14          almost 90 million barrels in this curve of oil and the  
15          113 billion cubic feet of gas through the year of 1972.

16          If we move on up to the curve that is plotted across  
17          the top, this is as indicated on the left margin, this is  
18          your reservoir pressures, points per square inch on the  
19          vertical scale. Plotted it is the heavy line as indicated  
20          by words "Reservoir Pressure." 2355 is the point back  
21          here in November of 1957 at the beginning of production.

22          The last pressure survey taken in July of 1972 was  
23          1,418 PSI, again plotted far over here to right from the  
24          middle of 1972. The other curve which we haven't yet  
25          discussed is the gas-oil ratio curve which again is shown

1 on up here with the Reservoir Pressure curve. The gas-oil  
2 ratio curve is read over here in the right margin. Gas-oil  
3 ratio is cubic feet per barrel of oil. I think you can  
4 see that in that early days it was average perhaps, 1,100  
5 cubic feet per barrel. That had been a gradual increase  
6 in the pool to the gas-oil ratio. However, it's been  
7 holding pretty steadily in the last few years and currently  
8 is averaging 1,300 cubic feet per barrel and 1,500 cubic  
9 feet per barrel.

10 Q Now, have the working interest owners formed an engineering  
11 committee in connection with the study of unitization in  
12 this area?

13 A Yes, sir. They certainly have.

14 Q When was that formed?

15 A That was formed at a working interest owner's meeting in  
16 October of 1967.

17 Q What was the purpose of the formation of this committee?

18 A The primary purpose charged to the engineering subcommittee.  
19 Actually there were two primary purposes. First, to  
20 determine the proper area to be unitized. And second,  
21 to work up a number of parameters which would be suitable  
22 as a basis for the working interest owners and to negotiate  
23 possible participation in a possible future unit.

24 Q Over what period of time did the engineering committee meet?

25 A It met in work sessions virtually continuously for anyone

1 who wanted to go from about November of '67 until just  
2 before a report, just before July of, August of '68.

3 Q Was the engineering--

4 A Nine or ten months.

5 Q Did they formulate a report by that time for the working-  
6 interest owners?

7 A That's right, which included a recommended unit area and,  
8 of course, a number of parameters.

9 Q What procedure did you follow then in getting the working-  
10 interest owner's representatives together?

11 A A meeting was called, of course. We had the address list  
12 as complete as--. Of course, Amoco, I'm saying, was  
13 ramrodding at this point, although Arco was working closely  
14 with them. But there was a complete address list of all  
15 working-interest owners that we could find in any way,  
16 shape or fashion; and they were notified as a matter of  
17 routine of all engineering meetings and all working-interest  
18 owners meetings.

19 Q What was the purpose of these meetings between the  
20 engineering committee or subcommittee and working-interest  
21 representatives?

22 A Well, it was to simply present the work that the engineering  
23 subcommittee had completed and then to stand back out of  
24 the way and let the working-interest owners work with them.

25 Q Did they approve at one meeting or did it take a number of

1 meetings?

2 A No. I think, well, actually the negotiations -- are you  
3 leading up to this point?

4 Q Yes.

5 A Real negotiations didn't begin until both major operators  
6 here had completed their reservoir feasibilities studies  
7 which actually was sometime around early December of 1971,  
8 I believe. No, December of 1970, I'm sorry. Then awhile  
9 back, December of '70 was when actually various  
10 negotiations began to the working interest owners.

11 Q What was the combination of the negotiations?

12 A Combination after a vote on some 56 different formulas  
13 were a favorable vote of about 87 percent of the Phase 2  
14 ownership on a formula which at that time was called  
15 Formula 47, because it happened to be Number 47 in the  
16 sequence that we looked at. So at this point it was a  
17 decision of the group, at least the majority, that it was  
18 time to move ahead then in the direction of seeking  
19 USGS and State Land Commission approval.

20 Q In other words after numerous meetings and proposals of  
21 about 56 different formulas 87 percent of the working  
22 interest owners did approve the formula which was finally  
23 adopted?

24 A That's correct. And that is the formula which we are  
25 offering for the basis for unitization here today.

1 Q Now, what was your next step that was taken by the working-  
2 interest owners or the engineering committee?

3 A Well, of course, this meeting now was in July of '71, I  
4 believe; and we had the vote at the meeting; but this  
5 needed to be ratified by signed ballots. And this  
6 always takes a while so --

7 Q And you circulated this?

8 A We circulated the ballots, and we got back 6 from those  
9 who had voted yes, you know. I forget, a couple of months,  
10 maybe two or three months. At this point then we were  
11 ready to go to the U.S.G.S., and then we did with our  
12 application.

13 Q Did you have numerous conferences with the U.S.G.S.  
14 officials?

15 A Beginning some time there in the mid-fall of 1971 and  
16 continuing until August of 1972, we had numerous conferences  
17 with the engineering staff and other personnel of the  
18 U.S.G.S. in Roswell, with their supervisory personnel  
19 in Washington, D.C., also.

20 Q Then you did file an application with the U.S.G.S. for  
21 designation of the area as proper and suitable for  
22 unitization and for approval of the form of Unit Agreement  
23 and also the participation formula?

24 A That's correct. And after, I might say, very exhaustive  
25 studies by the U.S.G.S., they did send us in August of

1 '72 the approval you have that has previously been entered  
2 into evidence by Mr. Embry?

3 Q Exhibit Number 2?

4 A Exhibit Number 2, right.

5 Q How long did it take the USGS in their study before they  
6 approved the participation formula?

7 A Well, it was approved by the letter of August of '72.

8 Q Approximately how many months after it was submitted?

9 A After the first application.

10 Q Yes.

11 A I believe we officially submitted the application in  
12 November of '71, although we had talked to them informally  
13 about it before then. So it's from November, I'll say,  
14 November 21; but I don't guess it makes any difference. I  
15 think that's what it was, though.

16 Q Approximately ten months?

17 A Oh, it was sometime early in August when we actually got  
18 the letter.

19 Q Was the form of the Unit Agreement and the formula also  
20 submitted to the Commission of Public Lands for approval?

21 A Yes, it was.

22 Q Now, during all of this period of time were the working  
23 interest owners kept informed of what was going on and  
24 the steps that were being taken?

25 A Yes. They were. There was correspondence any time we felt

1 that some significant event had occurred. We informed the  
2 working interest owners.

3 Q Now, the tract participation formula is set forth in Section  
4 13 of the Unit Agreement. Would you refer to that and  
5 explain it briefly?

6 A That's on Page 10. Okay. If you are looking at it, it  
7 looks like -- Page 10, Dick.

8 MR. STAMETS: Okay.

9 A Okay. Page 10. Now, this looks like as I was going to say,  
10 this looks a little bit complicated; but it really isn't.  
11 Phase 1 covers the first 11,000,000 barrels produced after  
12 the unit effective date. And it's simply 75 percent  
13 current production and 25 percent future primary as  
14 predicted by the Numeric Models Studies. That's Phase 1.

15 MR. STAMETS: Now, would you repeat that for me so I  
16 can get it down here?

17 THE WITNESS: 75 percent current production and 25  
18 percent future primary as predicted by Reservoir Numeric Model  
19 Studies.

20 MR. STAMETS: Okay. Thank you.

21 Q (By Mr. Hinkle) Okay. Phase 2 which looks like it's got  
22 a lot of stuff in there can really be summarized as being  
23 33 1/3 percent original oil-in-place and the rest which is  
24 66 2/3 percent is future reserves as predicted by Reservoir  
25 Numeric Model Studies.

1 MR. STAMETS: Future reserves under any particular  
2 tract?

3 WITNESS: Each tract.

4 MR. STAMETS: Under each tract?

5 WITNESS: Of course, yes. That's it.

6 Q Now, in your opinion is the formula fair and equitable in  
7 the interest of conservation, prevention of waste, and will  
8 tend to protect correlative rights.

9 A Yes, sir. It certainly is.

10 Q Now, Section 11 of the Unit Agreement provides for a plan  
11 of operation which is to be approved by the working-interest  
12 owners and the supervisor of the U. S. G. S. and  
13 Commissioner of Public Lands and this Commission. Refer to  
14 Exhibit 6 which is the plan of operation and explain briefly.

15 A Page 1 is simply letter directed to the people who have to  
16 approve this plan of operation which happen to be the  
17 district supervisor of the U. S. G. S. over in Roswell,  
18 Mr. Armijo, who is the Commissioner of Public Lands, Mr.  
19 Ray Graham, Director of Oil and Gas Department of the  
20 Commission of Public Lands, and then the State of New  
21 Mexico Oil Conversation Commission, Mr. Al Porter, and  
22 then the working-interest owners.

23 And the letter is a cover letter stating that this is  
24 the "Initial plan of operation, Empire-Abo unit, Eddy  
25 County, New Mexico," And, "in compliance with Section 11

1 of the Unit Agreement, Empire-Abo Unit, Eddy County, New  
2 Mexico, Atlantic Richfield Company as unit operator on  
3 behalf of itself and the other participating working  
4 interest owners, hereby submit for your approval a Plan  
5 of Operations to cover the period beginning with the  
6 effective date of the Unit Agreement and extending through  
7 the remainder of Calendar Year 1973."

8 The next page which would be the third page starts  
9 with the Initial Plan of Operation, Empire-Abo Unit. The  
10 first paragraph here is history in background to the project  
11 area. And I might call your attention to the attached plat,  
12 Exhibit 1; and we will flip back here, if you will, flip  
13 back to that exhibit. Now, these are just strictly exhibits  
14 on the Plan of Operation. They don't have any relationship  
15 to the overall series of exhibits here for the hearing.  
16 Other than that, they are a part of Exhibit 6 here.

17 I will state what this is, and this is and this is  
18 as I stated over here in the legend in the lower right-hand  
19 corner, it is the unit boundary and all the individual  
20 tracts within the full unit as approved by the USGS. It  
21 shows each tract in its boundary and its tract number  
22 corresponding to the exhibit in the Unit Operating  
23 Agreement.

24 The little added features here are location of the  
25 Empire-Abo Gasoline Plant which is in the south half,

1 northeast quarter of Section 3, Township 17, I mean 18  
2 South, 27 East, Section 3. That's the Empire Gasoline  
3 Plant.

4 The Phillips Gasoline Plant is shown located down in  
5 the southeast corner of Section 7, 18 South, 28 East.  
6 Then also shown in this map are, by the shaded triangles,  
7 the specific wells into which we plan to inject gas into  
8 the gas cap of the Empire-Abo Reservoir. And there happens  
9 to be 8 of those wells shown on this map.

10 Okay. Moving on down to Page 3 of the Plan of  
11 Operation, we see dropping on down its discussion about  
12 the general characteristics of the Abo Zone geologically  
13 and structurally speaking. We might point out Exhibit 2  
14 which happens to be the type log which Mr. Embry referred  
15 to earlier which is in the Unit Agreement.

16 Let's flip over here back behind the map and we find  
17 Exhibit 2 which is the Amoco Production Company State AU  
18 Number 1 Well. This is a gamma ray neutron radio activity  
19 line log, and there you see up near the top log the base  
20 of the Drinkard at 5,325 minus 1,784. And on down here at  
21 the bottom, we find of the Wolfcamp at 6,533 or minus 2,992  
22 subsea. That is Exhibit 2.

23 Moving on to Paragraph 2 of the Initial Plan of  
24 Operation, this covers current production, future recovery.  
25 We have discussed that pretty much already. Doesn't seem

1 to be any point in repeating it. There is a little more  
2 information in there. Paragraph 3 now is the basic  
3 concepts. Now, I'm over on page 4. Paragraph 3 is the  
4 basic concepts. "A. Field production history and Reservoir  
5 Numeric Models Studies have demonstrated that reservoir  
6 recovery is governed by a gravity drainage mechanism. With  
7 unitization, the operator will be able to maximize beneficial  
8 effects of this most efficient recovery mechanism by  
9 careful observation of well performance and shutting in  
10 or curtailing production from inefficient wells.

11 Paragraph B. Injection of plant residue gas will act  
12 toward pressure maintenance and orderly control of  
13 expansion of the secondary gas cap."

14 These are the concepts by which we will do our best  
15 to operate this reservoir, this unit area. Paragraph 4  
16 covers the special rules that we are going to request.

17 Q Go ahead and explain what the special rules are that you  
18 are proposing.

19 A Paragraph 4 "Special Rules. A. Unit Allowable. Starting  
20 on the effective date of the unit, the unit will receive a  
21 unit allowable, calculated so that Unit Area reservoir  
22 voidage will not exceed average daily reservoir voidage rate  
23 for 1972." Let me see. Where am I? "This will result in  
24 an increase from current 23,600 BOPD to about 30,000' BOPD  
25 for the Unit Area."

1           Then --

2           MR. MORRIS: Excuse me, Mr. Examiner. Are there copies  
3 of this Plan of Operation available? We don't have one. We  
4 haven't seen one of these. It's hard for us to follow the  
5 testimony.

6           MR. HINKLE: We have got one other one here. Here is  
7 one, Dick.

8           MR. MORRIS: Thank you.

9   A       The second step, then, to the allowable would be effective  
10 with the start of gas injection. At this point we would,  
11 the unit area allowable would be 40,192 barrels of oil  
12 per day. Reservoir Numeric Model Studies demonstrate added  
13 recovery and no reservoir waste at this rate.

14           We would then have a provision to produce the unit  
15 allowable. This is under B. This would be for B. "To  
16 produce the unit allowable from the most efficient wells  
17 without restriction. The only exception will be where a  
18 unit producing well directly offsets a non-unit well."

19           Paragraph C would be a "Provision that if any unit  
20 well is located within 660 feet of a non-participating  
21 tract on which is located an Empire-Abo producing well,  
22 such unit well will be allowed to produce no more than  
23 two times normal unit allowable for the Empire-Abo Pool."

24           Section 4-D then would be "Provision for administrative  
25 approval of additional injection wells, or changes in

1 injection well locations."

2 Moving ahead to part 5 which covers our operating  
3 Plans for 1973, "Initially gas injection will be into  
4 the Abo Gas Cap," in the same 8 wells that we just looked  
5 at over on Exhibit 1. And they are enumerated here.  
6 Okay. Attached Exhibit 3, flipping back to our exhibits  
7 here to the plan of operation again, Exhibit 3. If you have  
8 got it, there happens to be a Gamma Ray Neutron  
9 Log of the Atlantic Richfield M. Yates "B" (ARC) Well  
10 No. 8 which is one of the injection wells shown in Exhibit  
11 1.

12 This shows reef top and reef base, and we would  
13 intend to inject gas into this well building in the  
14 upper part of the section. Exhibit 4 now right behind  
15 Exhibit 3 is generally the same well, and this a schematic  
16 diagram of the mechanical system in the wellbore itself  
17 that we would have to inject this gas. This is typical  
18 of all injectors as far as the mechanical set up is  
19 concerned.

20 Moving back over to page 5 to the last paragraph,  
21 we would expect or we anticipate maximum gas injection  
22 volume into all these 8 wells we just saw on Exhibit 1  
23 to be no more than 7 million cubic feet a day. In terms  
24 of reservoir space fill up, this is equivalent to over  
25 60,000 barrels of water injection per day.

1 Plans are to pick up the residue gas from the outlet  
2 side of the two gasoline plants at about 700 pounds per  
3 square inch and compress it to 2,000 pounds per square  
4 inch for injection. The gas will contain hydrogen sulfide.  
5 And super-hydration facilities are planned in order to  
6 minimize possible corrosion.

7 Q How did you arrive at this first step and the second step  
8 in the project allowable?

9 A The first step allowable of about 30,000 barrels of oil  
10 per day is based on the fact there will be no more  
11 voidage at that rate than there was from the unit area  
12 as an average in 1972 on our primary operation.

13 Q In other words, that was the same voidage as in 1972?

14 A That's correct. The same voidage though more barrels of  
15 oil are being produced.

16 Q Now, what about your second step of 40,192 barrels?

17 A This is based on the numeric model studies which show  
18 not only no waste at this kind of rate, but increased  
19 recovery.

20 Q Now, how do you propose to allocate the project allowable?  
21 In that connection, you can refer to Exhibit no. 7. Okay.  
22 Refer to Exhibit 7 and explain what this is and what it  
23 shows.

24 A Exhibit 7 is our method of well-by-well allocation and  
25 credit for net reservoir voidage in determination of the  
~~allowable. The heading and the first six columns on the~~

1 first page, and by six columns I mean the columns with  
2 the little numbers up here at the top, 1 through 6, they  
3 actually include a number of subcolumns within most of them,  
4 numbered columns, but at any rate those columns to the left  
5 of column 7, I'll say, and that's the easiest way to look  
6 at it, are exactly like other pressure maintenance project  
7 forms that are presently in operation under this  
8 Commission's rulings now, such as the Vacuum Abo, for  
9 example, Phillips Vacuum Abo.

10 So it's simply a statement of well tests in the month  
11 we are basing the thing on, which happens to be a  
12 hypothetical month of the future, after we are injecting  
13 gas, March, 1974. Then we have in Column 5 average  
14 production, and then column 6 gas injection. So these,  
15 as I say, are very much the same as others.

16 Now, the voidage calculations begin on column 7 through  
17 11, and they simply reflect voidage in allowable values.  
18 This is true of both pages one and two. Now, you get  
19 through over here to the well count on page 2 and you will  
20 see twenty wells and wonder about that. And, of  
21 course, the reason for that is that we are dealing with  
22 a hypothetical sample here, a 20 well sample of that will  
23 be hopefully a 210 to 220 well unit area.

24 Every attempt was made to scale this sample in scale  
25 with the reservoir; but, of course, it had to approximate

1 by necessity. Nevertheless, the attempt was to reflect  
2 the types of wells that are in the reservoir at the present  
3 time, but I want to emphasize that these are not real  
4 tests. This is a hypothetical production, because we  
5 haven't got through March, 1974 yet. We will get there, we  
6 hope.

7 Okay. And then you move on over. That's the first  
8 two pages, and then you move over to the last three pages,  
9 1, 2, 3. And some of you, I'm sorry, will not have the  
10 very last page which is a table of fluid properties versus  
11 reservoir pressure, but we will get them to. That's just  
12 a foul up on our part, but any way those last three pages  
13 are simply, they simply show how we arrived at the voidage  
14 values that are over here on pages 1 and 2.

15 So under this allowable plan, the project area  
16 reservoir voidage I want to emphasize will be reduced to  
17 less than half of the current primary reservoir voidages.

18 Q Now, refer to Exhibit 8 and explain what this is and what  
19 it shows.

20 A Well, Exhibit 8 would try to throw a little more color  
21 into the proceedings here. Christmas red and green.  
22 This is the same map that we looked at back over here  
23 on one of the earlier, well, I guess it was Exhibit 4,  
24 the very same structure map, the same unit outlined and so  
25 forth; but it does now have the 8 injection wells as the  
red triangles, the same 8 wells we looked at in

1           What time the day of operation on, I believe, Exhibit  
2           A is still ago.

3           Q   Why are the injection wells located as you have shown  
4           them on this presentation?

5           A   Well, of course, there are a number of factors you have got  
6           to consider. Of course, our intent here in that we are  
7           going to do is put this down in the Gas Cap. So that was  
8           number 1. We want to distribute it as equally as possible  
9           to maintain pressure as much as we can throughout the  
10          reservoir.

11                   So the attempt is to distribute the wells  
12          volumetrically over the reservoir.

13          Q   And the Gas Cap is toward the north border of the reservoir?

14          A   Well, the Gas Cap is over the whole structure virtually  
15          and along the whole rest of the reef and and back to the  
16          back reef. And these wells are located, of course, in  
17          the Gas Cap. This was a primary consideration. You  
18          have got to consider permeability, injectivity, are you  
19          going to be able to get gas in the wells, and then  
20          naturally, and this is why the green tracts are on here.

21                   These green tracts are the same tracts that Mr. Embry  
22          had on his map being those tracts that we have now reason  
23          to believe likely will be in the unit. Naturally, we do not  
24          want to damage in any way these tracts; and, therefore,  
25          we are locating our injection wells as you can see by  
                looking at Exhibit A at least two locations away.

1           which will not participate in any unit, and in some cases  
2           three locations away.

3   Q   Do you have anything else with respect to this exhibit?

4   A   No, that's all I have on that.

5   Q   I refer to Exhibit Number 9. I might state that Exhibit  
6       Number 9 is a diagrammatic sketch of each of the 8 injection  
7       wells, and we have just numbered it as 1 exhibit. Refer  
8       to Exhibit 9 and explain what it shows.

9   A   Exhibit Number 9. What you are looking at there at the  
10       first, this is a packet which has the mechanical diagram of  
11       each of the wells, each of the injectors. This shows how  
12       we will complete these wells, the equipment we will have in  
13       the hole, the mechanics of completing them here. On all  
14       these wells, they are all the same on. So unless someone  
15       wants to, I'll not go into detail on each of these.

16   Q   The only reason for having a separate diagram is that  
17       perforations are at different depths, the cementing and  
18       so forth is different in each well?

19   A   That's correct.

20   Q   Now, refer to Exhibit 10 and explain it.

21   A   Exhibit 10 again is a packet which includes the Gamma Ray  
22       Neutron Log on each of the injection wells that we just  
23       had in the packet of diagrams in the mechanical setup.  
24       And it's pretty well self-explanatory so I'll say no more  
25       about that.

1 Q In your opinion in completing these injection wells in  
2 the plans that have been indicated, will it confine the  
3 injection of gas to the Alvarado reef formation?

4 A Yes, sir. We intend to make every effort to see that gas  
5 stays in the Alvarado reef.

6 Q Now, refer to Exhibit 11 and explain what this is and what  
7 it shows.

8 A On Exhibit 11 the heading states that it's Empire-Alvarado Pool,  
9 future recovery projections as they affect State of New  
10 Mexico Leases. There are several vertical columns, several  
11 horizontal lines on the left. For example, starting with  
12 the very first line, we see what variable we are dealing  
13 with. In this case, it's pool ultimate oil recovery as  
14 a per cent of the original oil in place.

15 Moving to the first column immediately to the right of  
16 the definition there, we find a 45.0, and that is the per  
17 cent of the original oil in place which the pool will  
18 recover or the total unit area will recover under  
19 competitive natural depletion, non-unitized.

20 Then the second operational method one step to the  
21 right, residue gas injection unitized which is what we are  
22 proposing. We are under this method of operation. The  
23 increase for the pool will go from 45 per cent of original  
24 oil in place to 52.9.

25 Looking over in column 3 which is labeled Advantage Of

1 Unitized Case over non-unitized case, we find a plus  
2 7.9; and that's simply the difference or the incremental  
3 increase in terms of percent of the original oil-in-place  
4 some are 45.0 in primary to 52.9 in residue gas injection.

5 The next column deals with pool total reserves after  
6 7-1-73. And there is barrels of oil. And you see that  
7 there are numbers here that indicate under competitive  
8 natural depletion future recovery would be 79 million  
9 barrels of oil. This is from the pool as a whole. Under  
10 residue gas injection, that recovery goes up to 109  
11 million barrels. This, of course, corresponds to this 52.9  
12 percent of original oil-in-place or this increased recovery  
13 due to residue gas injection shown in Column 3 of  
14 approximately 30 million barrels of oil.

15 Now, we move from the pool to the figures in the first  
16 two horizontal lines down in the State Leases Gross  
17 Reserves after 7-1-73, barrels of oil. So the first  
18 column which is 60 million 700 plus thousand barrels, this  
19 states the gross share of that 79 million figure directly  
20 above it. This is what the State would recover after  
21 7-1-73 under primary continued competitive operation.

22 And moving 1 Column over to the right we see that if  
23 the State, if we form a unit here, State Leases gross  
24 reserves increase from 60.7 million to 77.7 million. Now,  
25 this is an increase as shown in Column 3 of almost

1 17 million barrels gross reserves in increase to the State.

2 Moving down to the next line then, this is simply a  
3 figuring calculation of what the State's 12 1/2 percent  
4 net royalty share of that gross figure up there on the  
5 line above would be under each of these same conditions.  
6 And we see then that under competitive natural depletion,  
7 the State's net royalty oil would be about 7.6 million  
8 barrels after 7-1-73. If we unitize and go ahead their  
9 share of net with our gas injection case, their share  
10 of the net, their net royalty share, is 9.7 million or  
11 an increase of in excess of 2.1 million barrels of oil  
12 net to the State royalty from unitized residue gas  
13 injection.

14 All right, the next line down then simply gives the  
15 dollar value to the State of these net royalty reserves  
16 after 7-1-73 at a price set over here of \$3.81 a barrel.  
17 We see that moving to the column to the right under primary  
18 that 7.6 million barrels of oil that the State would net  
19 is worth 28.9 million dollars. Under secondary, that  
20 9.7 million barrels net royalty oil to the State is worth  
21 37 million dollars.

22 In other words, in the last column to the right you  
23 see a gain in dollars to the State of approximately 8.1  
24 million dollars from the residue gas injection over  
25 continuation of primary operation. The last line merely

1 shows that the future life after 7-1-73 under competitive  
2 natural depletion is expected to be 26 years. Under our  
3 residue gas injection operation, it would be predicted to  
4 be 24 years.

5 The note below simply shows what interest, what state  
6 interest in the unit formula the reserves above were based  
7 on. Phase 1, the state's gross interest will be about  
8 69.6 per cent that covers the first 11 million barrels  
9 after unitization. Then in Phase 2 the state's interest  
10 builds up to 71.5 per cent and continues at that point until  
11 depletion.

12 The bottom note states that the calculated oil loss  
13 for each year's delay due to starting unit operation and gas  
14 injection at a lower reservoir pressure is in excess of  
15 2 million barrels of oil loss, forever, I might add, per  
16 year delay. The State of New Mexico's share of this  
17 loss interest, I want to emphasize that's deferred income,  
18 that's loss. The State of New Mexico's share of this loss  
19 is 2 million barrels times their weighted average interest  
20 times royalty interest is 183,000 barrels of oil reserves  
21 lost net to the state royalty for every year's delay in  
22 formation of this unit.

23 The last line simply multiplies that 183,000 barrel  
24 number by the price of oil per barrel of \$3.81 to come out  
25 with approximately 695,000 dollars loss to the state

1 for every year's delay in unitization of this reservoir.

2 Q Now, refer to Exhibit 12 and explain this.

3 A This is, Exhibit 12 again, we are talking about the  
4 State. We are talking there about the potential rate  
5 benefits to New Mexico State Lands Leases by unitization  
6 as we are proposing here today. Under the pool total  
7 requested top allowable, the unitized State rate Phase 1  
8 under the Phase 1 participation, 29,253 barrels per day.

9 The non-unitized primary, in other words, State rate  
10 at the current rates, 25,600 barrels per day times the  
11 current State share of that rate, 17,615 barrels per day.  
12 And the next line down simply subtracts 17,615 from  
13 29,253, and we find that the State Lease rate gained by  
14 unitization from continued primary into Phase 1 is 11,638  
15 barrels of oil per day net gain. Well, that's gross gain  
16 to the State.

17 Okay. Now, to get the net royalty gain, we multiply  
18 that 11,638 figure by .125; and we find a net royalty gain  
19 to the State as shown here of 1,455 barrels of oil per day.

20 And the next and final column we simply multiply that  
21 3.81 dollars a barrel and we find that the net gain moving  
22 from primary into Phase 1 of the Unit Agreement to the  
23 State is 5,544 dollars per day. And I might emphasize,  
24 as we saw in Exhibit 11, that the State's interest increases  
25 in Phase 2 so that we would expect the State's gain

1 primarily to be somewhat greater than \$5,544 per day.  
2 And after those first 11,000,000 barrels are produced,  
3 then we move into Phase 2.

4 Q So every day that is lost in putting this into effect,  
5 they are going to lose over \$5,000 a day as far as the  
6 State is concerned?

7 A That's right. They defer that. They lose \$182,000 a  
8 year as Exhibit 11 said, per year's delay.

9 Q Now, Exhibits 11 and 12 relate to the State's interests.  
10 Have you made a study as to the overall gain that will  
11 be effected by reason of unitization?

12 A Well, yes, of course.

13 Q All right. What do you anticipate will be the total  
14 ultimate recovery they will gain over the primary?

15 A Thirty million barrels of oil approximately.

16 Q Over what period of time will this be produced?

17 A Over the next twenty-four years as was mentioned in one  
18 of the previous exhibits.

19 Q Now, in the event the Unit Agreement is approved and the  
20 participation formula is approved and the project  
21 allowable, in your opinion will this be in the interest  
22 of conservation, the prevention of waste, and tend to  
23 protect correlative rights?

24 A Yes, sir. It certainly will.

25 Q Do you have anything else you would like to add?

1 A No, sir. I do not.

2 MR. HINKLE: We'd like to offer into evidence  
3 Exhibits 4 through 12.

4 MR. STAMETS: Are there objections to the entrance  
5 of these exhibits? They will be admitted into evidence.

6 MR. HINKLE: That's all of the Direct.

7 MR. STAMETS: There will be a 15-minute coffee  
8 break at this time.

9 (Whereupon, the hearing was held in recess from  
10 2:40 P.M. until 2:50 P.M.)

11 MR. STAMETS: The hearing will come to order, please.  
12 Are there questions of this witness?

13 CROSS-EXAMINATION

14 BY MR. MORRIS:

15 Q Mr. Christianson, concerning your Exhibits 11 and 12  
16 where you made a projection of future recovery for the  
17 State Lands involved in this unit --

18 A Yes, sir.

19 Q -- did you make any similar studies with respect to  
20 individual tracts or tracts owned collectively by the  
21 various companies that are participating in the, excuse  
22 me, not participating necessarily but have acreage within  
23 the unit?

24 A Some studies, yes, sir, of various tracts. Right.

25 Q And have you made studies of this sort with respect to

1           those tracts and companies that at this point are non-  
2           consenting interests in the unit?

3       A     Yes, some of them, right.

4       Q     Did you make a study of this sort with respect to the  
5           tracts that are owned by Signal Oil and Gas Company?

6       A     Yes. I've got, of course, we looked at two or three  
7           different things with them, right. Sure did.

8       Q     Now, on your Exhibit 11 and 12 where you show the future  
9           recovery projections for the State, if you made a similar  
10          study with respect to the Signal Oil and Gas Company  
11          tracts, would it show a gain or a loss?

12      A     Relative to what?

13      Q     Well, the same relative considerations that you made on  
14           your Exhibits 11 and 12.

15      A     Well, let me, as a matter of fact, of course, we do have  
16           a study. Now, let me see. I guess I'm not clear on  
17           your question. Relative --

18      Q     My question is this: You have made a rather detailed  
19           study here of future recovery projections as they affect  
20           the combined State of New Mexico leases.

21      A     Right.

22      Q     And obviously you have presented this to show the State's  
23           relative position, as you interpret it here, as where you  
24           compare the non-unitized production against what the  
25           recovery would be under the Unit Plan of Operation. And

1 I'm simply asking you if you had made a similar study  
2 with respect to the two leases that are owned by Signal  
3 Oil and Gas Company?

4 A Yes. Let me give you a few answers from that, if you  
5 will. Okay.

6 Q That's what I want.

7 A All right. First of all, Signal State E-1 and State M-1  
8 combined, that's the total Signal interest; am I correct?

9 Q Yes, sir.

10 A Now, the original oil-in-place on that twin forty-acre  
11 tract that has two wells on it is 892,082 barrels from  
12 the Engineering Committee study. The cumulative oil  
13 actually produced from that tract from those two wells  
14 on that tract from the beginning to February 1st, 1973,  
15 happens to be 870,688 barrels of oil. This is actually  
16 oil measured in the tanks.

17 Q Mr. Christianson, excuse me. Let me interrupt you a  
18 moment.

19 A That happens to be 97.6 percent of Signal's original oil-  
20 in-place that you have produced up to February 1, 1973.  
21 That's the first thing in our study. You want me to go  
22 ahead with the rest of it?

23 Q Mr. Christianson, you are not answering my question, sir.  
24 I am asking you the question, please. Have you made a  
25 similar determination as shown on Exhibit 11 with respect

1 to the Signal tracts? The first consideration shown on  
2 Exhibit 11 was what the State tracts would produce under  
3 competitive natural depletion, that is, non-unitized  
4 production.

5 A Yes, I am getting to the answer of your question in  
6 fullness of the whole consideration. I think the  
7 Commission needs to hear the whole thing, not just your  
8 specific question which I will answer as I move on down  
9 this study. It will come. You'll hear it, but first  
10 of all --

11 MR. STAMETS: Mr. Christianson, in the interest of  
12 time here, I think it would be better if you would answer the  
13 attorney's specific questions; and then if your counsel has  
14 something on Redirect, you can cover those points at that time.

15 THE WITNESS: I see. Okay.

16 Q (By Mr. Morris) All I'm asking, Mr. Christianson, is if  
17 you have made a study that would produce for the Signal  
18 Oil and Gas Company the same type of figures that you  
19 have shown here in your three columns on Exhibit 11. The  
20 first consideration being what recovery Signal would  
21 expect to get under your studies under non-unitized  
22 operation. And then make a comparison from that to what  
23 Signal would receive under the Unit Plan of Operation.

24 A Okay. Let's see now. Your total ultimate primary  
25 recovery or your primary recovery, let me get my numbers

1 straight here. Let me say your total ultimate recovery,  
2 I'll state it this way. Your total ultimate recovery  
3 from primary to wells, from primary all the way through  
4 including your ultimate recovery as predicted by our  
5 Numeric Models --

6 Q Yes, sir.

7 A -- that happens to be, you want me to give you that  
8 number?

9 Q Yes, sir.

10 A It is 273.2 percent of your original oil-in-place. Now,  
11 in barrels if you want that, your total ultimate primary  
12 recovery is 2,429,300 barrels. After subtracting, let's  
13 see, well, let's take your cumulative to February 1st,  
14 '73, or let's take it to 7-1-73, which I believe was the  
15 way the State was figured.

16 Okay. Your predicted primary recovery, I think this  
17 is after two Numeric Model Studies, your recovery after  
18 7-1-73, and that's comparable to what we talked about  
19 for the State, and this is your gross working interest  
20 recovery, is 174.5 percent of your original oil-in-place.  
21 Now, in terms of barrels, now, this is under primary  
22 production with your tract located advantageously as it  
23 is on one of the two wells or two of the lowest  
24 structural wells in a gravity drainage reservoir which  
25 means as these recovery numbers I've already shown in

1 terms of percent original oil-in-place which means that  
2 you, under competitive depletion, will continue to drain  
3 oil from all the tracts up.

4 Q Mr. Christianson, if you will please answer my very  
5 simple question. All I have asked you is to please give  
6 me in terms of barrels what according to your study  
7 would be the remaining production of Signal Oil and Gas  
8 Company tracts if the field is not unitized.

9 A Well, that 174.5 percent of your original oil-in-place  
10 which you will produce if the field is not unitized from  
11 7-1-73 to abandonment under primary is equivalent to  
12 approximately 1,559,000 barrels of oil.

13 Q Okay. We finally got there. One million five hundred  
14 and fifty-nine thousand barrels?

15 A Right.

16 Q All right. Now, if the field is unitized effective  
17 7-1-73, what would Signal's production in barrels be  
18 under both Phases 1 and 2 of the proposed Unit Agreement?

19 A Well now, keep in mind these are estimated numbers,  
20 because we don't know exactly how much oil is going to be  
21 produced to 7-1-73; and, of course, the engineering  
22 predictions are subject to some degree of inaccuracy.  
23 Okay. Let's see. We are saying now, what was the  
24 question? I'm sorry. What was the question?

25 Q The question was simply, Mr. Christianson: Under the

1 proposed Unit Participation both Phases 1 and 2  
2 according to your calculations, what would be Signal Oil  
3 and Gas Company's production in barrels?

4 A If they joined the unit?

5 Q Yes, sir, if we joined the unit.

6 A Your total recovery now, see, my problem, I'll have to  
7 subtract. Your total ultimate recovery would be, if you  
8 join the unit, would be 2,147,000. Now, this is under  
9 the formula. So if we subtract from that, take that  
10 number, your production to 7-1-73 which is 914, is  
11 estimated to be 914,000 barrels approximately, we get,  
12 what do we get? We get that you would get under unitized  
13 operation, now I want to, okay. You'd get 2,233,000  
14 barrels of oil after 7-1-73 if you joined the unit.

15 And I want to amend, I'm sorry; but I made a wrong  
16 calculation when I said you would get 1,559,000 after  
17 7-1-73. That's after 2-1-73. I should have subtracted  
18 your estimated cumulative to get these two numbers on an  
19 equal basis.

20 I should have subtracted 914,000 barrels instead of  
21 the 870 that I did in fact subtract. So your previous  
22 number that I gave you is in error, and I'm sorry. Okay.  
23 That's 1,514,000 barrels.

24 MR. STAMETS: Mr. Christianson, I've heard so many  
25 numbers here that I'm fully lost. Let me get a couple here I

1 can hang the hat on. You predicted under primary conditions  
2 Signal's ultimate recovery of 2,429,300 barrels of oil.

3 THE WITNESS: That's right. If this unit is ever  
4 formed, their recovery to 7-1-73 plus their recovery after  
5 7-1-73 under primary operation would be this total number.

6 MR. STAMETS: Their share of the unit production  
7 plus what they had before unitization would come to 2,147,000  
8 barrels?

9 THE WITNESS: Right. A total ultimate recovery  
10 primary to 7-1-73 plus unit recovery is 2,147,000 barrels.

11 MR. STAMETS: You are talking about a loss there of  
12 around 300,000 barrels?

13 THE WITNESS: I don't define that as a loss.

14 MR. STAMETS: Difference in numbers of a minus  
15 300,000 barrels?

16 THE WITNESS: If the reservoir is no longer going to  
17 be produced under the conditions under which Signal has had  
18 this advantageous drainage position, then you can't really talk  
19 about that as being a loss.

20 MR. STAMETS: Okay. I'm clear on this.

21 Mr. Morris, do you have some more questions?

22 MR. MORRIS: Yes, sir.

23 Q (By Mr. Morris) Without characterizing it one way or  
24 another, Mr. Christianson, there is a difference between  
25 the two figures of approximately 300,000 barrels? That

1 is the difference of 7-1-73 into the future being the  
2 difference in what Signal would produce if no unit is  
3 formed compared to what they would produce if a unit is  
4 formed and Signal joined it. Is that a fair statement?

5 A Yes, sir. If the reservoir were to continue under  
6 primary operations, competitive operations as they now  
7 exist and the rules were to continue as they are now,  
8 in other words, the rules that have been in operation  
9 designed as they are for a general-type reservoir  
10 situation, simply don't quite cover a gravity drainage  
11 type recovery situation.

12 Q Now, the rules have been --

13 A Therefore, if you continued to enjoy your advantageous  
14 drainage position, you would recover this amount of oil.

15 MR. STAMETS: Mr. Christianson, if you could make  
16 your answers somewhat shorter, I certainly would appreciate it.  
17 Like I say, these things can be brought out in Redirect.

18 THE WITNESS: I see. Okay.

19 Q (By Mr. Morris) Mr. Christianson, this pool has been  
20 produced under the General Rules and Regulations of the  
21 Commission governing oil production?

22 A Yes, sir.

23 Q And under the form unit allowables for this department.  
24 Now, your Unit Plan of Operation actually would  
25 accomplish a complete change of Proration Formula, would

1 it not?

2 A We are applying it only to the Unit Area, the Project  
3 Unit Area.

4 Q But that is your intent by unitizing the field as a  
5 whole would be to change the allocation method as to  
6 all wells in the unit based upon this Participation  
7 Formula that is proposed in the Unit Agreement?

8 A Yes. You mean each operator or working interest owner  
9 would participate on that basis of what's in the Unit  
10 Formula as far as this Phase 1 and Phase 2 procedure?

11 Q Yes. In other words, your Unit Participation Formula  
12 would supersede the allocation formula that is presently  
13 provided by the General Rules and Regulations of the  
14 Commission?

15 A No, I don't think. The unitization doesn't. It merely  
16 sets out whatever one's interest is in the total oil  
17 provided from the unitized or project area.

18 Q Is each working interest owner being asked to contribute  
19 a certain amount of capital to the unit operation based  
20 upon its equity ownership in the unit?

21 A Yes, sir.

22 Q What is the total unit capital requirement?

23 A Well, for the overall project, now keep in mind that  
24 this is just, I'm not a, I'm a Reservoir Engineer, not  
25 a Production Engineer. I'm no expert on costs.

1 Q Approximately?

2 A But it amounts to about a 3.3 million dollar additional  
3 cost of unitized operation over primary operations, in  
4 that range.

5 Q It's about three and a half million?

6 A Well, when it boils down at the end, it may be different  
7 from either one of those numbers, but that's  
8 approximately right.

9 Q And each operator would be expected to contribute its  
10 share of capital to the unit?

11 A Yes, sir.

12 Q So in other words, Signal in addition to the difference  
13 in oil production that we were discussing a minute ago  
14 comparing continued primary and unit operations, in  
15 addition to that difference that Signal would suffer it  
16 would also be expected if it joined the unit to  
17 contribute capital to the unit; is that correct?

18 A That's correct. They would be expected to contribute  
19 capital, but let me point out that their share, their  
20 immediate share of right in the unit would be greater  
21 than their current primary rate. So that in terms of  
22 pay out that capital, I'm certain, would be paid out  
23 because your rate could go up.

24 You got, I don't know the exact figure. I've got it  
25 here someplace, but it would go up. Your rate goes up

1 from its current amount of barrels a day to something  
2 greater than that. For example, if you want to figure  
3 it out, you can figure it out.

4 Q I didn't ask you that question.

5 A Well, your rate will go up and you will pay out your  
6 increased investment relative to time.

7 Q Mr. Christianson, in all the 56 formulas that were  
8 considered by your operating group, was any formula  
9 ever considered that would in effect hold harmless some  
10 of the edge tracts such as the Signal tract that would  
11 allow them to at least participate in the unit on a  
12 basis that would return to them the amount of oil that  
13 they would otherwise expect to receive on continued  
14 primary conditions plus something in addition to cover  
15 their capital contribution to the unit?

16 A Well, 56 formulas were considered. Signal voted yes on  
17 a few. I don't remember which ones. I think they were  
18 the ones that had 100 percent remaining primary in them  
19 or roughly that, but I'm not going to, I don't want to  
20 answer that question in the sense that the way you  
21 stated it.

22 You said was any formula considered that would hold  
23 harmless. What is your definition of harmless? Harmless  
24 relative to what? In my opinion, the Unit Formula holds  
25 Signal harmless relative to their fair equity in the

1 reservoir.

2 Q Even though they would lose some 300,000 barrels of oil?

3 A They would be unable to continue to drain the other  
4 tracts as they are now draining them, or let's say,  
5 their drainage would be reduced, I'm afraid, if not  
6 limited.

7 Q I'd like to talk about your Plan of Operations a minute,  
8 Mr. Christianson.

9 A Yes, sir.

10 Q Do you have a provision in your Plan of Operations that  
11 would restrict the production from any well in the unit  
12 that is a direct offset to a well located outside of the  
13 unit?

14 A Yes, sir.

15 Q Now, what was the purpose of restricting those wells?

16 A Restricted wells that are direct offsets to non-  
17 participants?

18 Q Yes. What was the purpose of that?

19 A Well, really it is in line with what the Commission has  
20 done in other partial-pressure maintenance or pressure  
21 maintenance projects.

22 Q All right. But what is the purpose of restricting? As  
23 I understand your Plan of Operations, the wells would be  
24 able to produce unrestricted within the unit, but the  
25 wells that would be located as direct offsets, the non-

1 unit wells, would be restricted to twice a top unit  
2 allowable. What is the purpose of restricting those  
3 wells?

4 A Really, it was in line with what other pressure  
5 maintenance units had done, and we didn't mind it or  
6 object to it. So we said, "Okay. We will restrict the  
7 direct offsets to twice normal allowable."

8 Q Obviously, Mr. Christianson, it's a protection to the  
9 well outside the unit so that you won't be creating a  
10 big pressure sink or coning water or damaging the non-  
11 unit well; isn't that the obvious purpose for such a  
12 restriction?

13 A Let me point out that we will be reinjecting 70 percent  
14 of our produced gas in the unit, and I don't know if you  
15 have run any voidage calculations, but our 284-barrel-  
16 a-day offset, you won't be avoiding as much net  
17 reservoir space as your 142-barrel-a-day will be. And  
18 the pressure drop goes in the direction of the well  
19 that's voiding space.

20 Q As far as you know, there is no reason for that  
21 restriction other than this is what has been in other  
22 Unit Agreements? You don't have any engineering basis  
23 for it?

24 A That's right.

25 Q Would excessive production from any well cause the

1 prospect of water cone in this area?

2 A I honestly don't know. Our Model Studies didn't really  
3 indicate that, no.

4 Q You ran those studies to observe the effects of  
5 production and the rate of production on water coning  
6 because there is a water problem here; is there not?

7 A Well, there is in some edge wells, yes. That's right.  
8 As a matter of fact, I might add that under unitized  
9 operation not having to worry about maintaining a  
10 competitive position with offsets as the operator in the  
11 primary has to do, the unit would be able to control the  
12 situation.

13 That is, if a well that belonged to the unit was  
14 producing at a rather high rate and began to give  
15 indications that water was coning in, we would be of no  
16 necessity to compete particularly with any offset tracts.  
17 Therefore, we would be able to reduce that oil rate and  
18 produce it from a well which had no water coning problem,  
19 was in the thick oil column away from the water-oil  
20 contact.

21 So this is the whole purpose for unitizing this  
22 reservoir to gain the flexibility. If we see a well  
23 that is inefficient, we can shut that rascal in and  
24 transfer its voidage. This is the whole purpose of  
25 forming the units, that we are not going to be forced to

1 produce a well coning water at a higher rate in order to  
2 compete with our neighbor.

3 We have got flexibility. We can move that oil  
4 production around in the place where the oil column is  
5 the thickest maximized recovery from this reservoir.

6 MR. MORRIS: I have no further questions.

7 MR. STAMETS: Are there other questions of this  
8 witness?

9 CROSS-EXAMINATION

10 BY MR. KELLAHIN:

11 Q Mr. Christianson, you have set out the Participation  
12 Formula in the Unit Agreement. Is it the policy to  
13 admit all tracts solely on the basis of this formula?

14 A Is it the policy to what?

15 Q Admit the various tracts. Do they have to come in under  
16 this Participation Formula or do you make any adjustment  
17 in the participation from one tract to another?

18 A Not at this very meeting. Now, I don't know if someone  
19 perhaps at some date could.

20 Q I'm talking about in the tracts joining the unit as of  
21 today. They come in under this formula; is that correct?

22 A That's right.

23 Q And you don't make any adjustment from one tract to  
24 another in order to induce somebody to come in?

25 A Not today.

1 Q How about tomorrow?

2 A Maybe not ever, but we don't know, but our position is

3 no.

4 Q That would call for an amendment of your Unit Agreement,

5 wouldn't it?

6 A I think so, yes. I mean, the participations are set.

7 They have been approved by the USGS. I didn't really

8 understand your question, I'm sorry. The USGS has

9 approved these participation factors and so have the

10 working interest owners.

11 Q In your Phase 2, you have 33 1/3 percent original oil-

12 in-place and 66 2/3 future reserves. How were these

13 figures arrived at for each tract?

14 A Yes, sir.

15 Q How did you arrive at those figures? I don't mean the

16 percentage. I mean, how did you arrive at the amount of

17 oil that would be attributed to each tract?

18 A To each tract? Well, basically the Engineering Committee

19 as a group studied the reservoir and determined this

20 oil-in-place. That is, representatives from all

21 operators who were interested and asked to participate.

22 We had a great volume of various types of data. We

23 analyzed it and came up with these values.

24 Q Now, you did use a Reservoir Model Study, did you not?

25 A Not to determine the original oil-in-place, no, sir.

1 That was entirely independent.

2 Q How about your future reserves, your 66 2/3 figure?

3 A Oh, yes. Oh, yes.

4 Q Who made that study?

5 A Amoco made a study and Arco made a study.

6 Q They are the owners of some 60 percent of the unit?

7 A Correct. Right.

8 Q Now, do you have the reserve figures on each individual

9 tract available here?

10 A Yes.

11 Q Would it come under Phase 2?

12 A You mean, what reserve? I've got the fraction which I

13 can multiply. I have some. Go ahead. Which tract?

14 Q Well, I would like to have the figures on Amoco's Number

15 71 and Arco Number 37-D. Do you have that?

16 A Amoco's Number Tract 71?

17 Q Yes, sir.

18 A You mean the remaining reserves that they would --

19 Q Well, their participation on the Phase 2, whatever it

20 might be.

21 A I don't really have that number as such. I suppose I

22 could take Phase 1 and Phase 2 participations for those

23 tracts and multiply by the recovery.

24 Q Well, you did give them a participation, did you not,

25 those two tracts?

1 A Of course, yes. They got a participation, and it's  
2 shown in Exhibit C of the Unit Operating Report or Unit  
3 Operating --

4 Q Neither one of them has a well on it, does it?

5 A I don't know. Let's look. You are probably right, but  
6 I don't understand. Let me see. Let's see what tracts  
7 you are talking about. Okay. Can you give me the  
8 location?

9 Q I don't have any plats, Mr. Christianson.

10 A You don't have a copy of the Unit Operating Agreement?

11 MR. STAMETS: I believe 71 is in Section 31. They  
12 are both in 31, in the south half of the northeast quarter of  
13 31.

14 THE WITNESS: South half of the northeast quarter of  
15 what?

16 MR. STAMETS: Thirty-one. Eighteen, twenty-seven.  
17 It looks like 18, 28.

18 THE WITNESS: Yes, Amoco C. Okay. There is 71.  
19 Now, 37-D. Where is that rascal? There is 37-C and D. Well,  
20 let me look in the report here. I know what these are. I  
21 mean, it's just a question of finding it right there. They  
22 are edge tracts that had a little original oil-in-place.

23 MR. STAMETS: They are both in the south half of  
24 that northeast quarter. One is the southwest and the other is  
25 the southeast.

1 THE WITNESS: Thirty-seven?

2 MR. STAMETS: Of 31.

3 THE WITNESS: That's 57 from the southwest quarter,  
4 northwest quarter. Are you talking about 37 or 57?

5 Q (By Mr. Kellahin) Thirty-seven D is the one I was  
6 talking about.

7 A That happens to be located in the southeast of the  
8 northeast of Section 31. So, well, we can go back to  
9 the first, very first exhibit and see why those tracts  
10 were given some participation.

11 Q Could you tell me this? Wasn't there a well drilled on  
12 each of those tracts plugged and abandoned?

13 A Yes, sir. That's right. They are shown on the map.

14 Q Dry holes?

15 A Right, but let's look at, I mean, we want to find out  
16 where the exhibit --

17 Q Well, you can come to that later when your attorney asks  
18 you the questions. I'd like to go on to another.

19 MR. STAMETS: I'd like to get to whatever point Mr.  
20 Kellahin is trying to make.

21 A They were given original oil-in-place and original oil-  
22 in-place is in the Phase 2 Formula; and therefore, they  
23 got participation because there is a little bit of oil-  
24 in-place under a corner of each one of these tracts.

25 Q Do you know whether or not they actually got more credit

1 under Phase 2 than Penroc's Tract 56 did?

2 A No, I don't. You mean individually or the two tracts  
3 together or what?

4 Q Each tract individually.

5 A No. I don't know whether they did or not.

6 Q Well, your exhibit would show it, would it not?

7 A Oh, yes. Exhibit C of the report, we can look and see.  
8 I presume you have got the numbers or you wouldn't be  
9 asking. Are you referring to Tract 56 for Penroc?

10 Q Yes. The well on that tract according to my figures is  
11 making 135 barrels a day.

12 A That's correct. You mean, are you referring to that well  
13 that is deviated down into the corner of the Section B  
14 130 feet from the south line and 150 feet from the east  
15 line?

16 Q I haven't any idea.

17 A I think that's the well you are referring to.

18 Q I don't know what that has to do with the question. It  
19 is making 135 barrels a day, right?

20 A That's right. I just wanted to make sure we were talking  
21 about the same well.

22 MR. STAMETS: Let's go off the record.

23 (Whereupon, a discussion was held off the record.)

24 MR. KELLAHIN: If the Examiner please, I think the  
25 witness has said his exhibit will show the allocations to each

1 one of these tracts; and I'll refer to that and make no  
2 further questions.

3 A Okay. The allocation of Tract 56. You want me to put  
4 that in --

5 Q I'm through asking questions, Mr. Christianson. I am  
6 through. You don't need to answer anymore questions.

7 MR. STAMETS: Are there other questions of the  
8 witness?

9 CROSS-EXAMINATION

10 BY MR. STAMETS:

11 Q Mr. Christianson, a wide variety of engineering problems  
12 and results have been described here; and many times  
13 they refer to Numeric Models.

14 A Yes, sir.

15 Q And of course, these covered and number these exhibits.  
16 Let me qualify here one point. You as a Professional  
17 Reservoir Engineer, are you in agreement basically with  
18 the various calculations associated with the Numeric  
19 Model?

20 A I certainly am, yes, sir.

21 Q And you are in agreement with the estimates of additional  
22 recovery and so on?

23 A Yes, sir.

24 Q Okay. You are familiar with the Numeric Model calculated  
25 allowable of 40,192 barrels a day from the Unit Area will

1 not be harmful to the reservoir and will in fact be less  
2 harmful than the current allowable; is that correct?

3 A Yes, sir. It will. In fact -- You want me to be  
4 responsive to that at all?

5 Q No. I think that that's a sufficient answer there. I'm  
6 somewhat concerned about wells located higher on the  
7 structure here and whether or not these tracts will be  
8 drained. I'm talking about non-participating tracts now,  
9 whether these tracts will be drained earlier and will  
10 actually lose production by the plan that you have  
11 proposed here with injecting gas high to the structure  
12 and withdrawing oil lower to the structure.

13 A Let me say first that we are locating our injection wells  
14 subsea. Let's see. You have the exhibit that has the  
15 injection wells in green tracts on it. So you can see,  
16 I think we are locating the wells well away from any  
17 tracts that we feel will be outside the unit. We are  
18 also --

19 Q You don't think the higher rates of withdrawal will have  
20 any effect on these non-participating tracts?

21 A The higher rates of withdrawal will not, no, because we  
22 are not, well --

23 Q Referring to Exhibit Number 3 again in Section 6,  
24 Township 18 South, Range 26 East, in the northwest  
25 quarter of the northeast quarter there is a well

1 identified on this exhibit as Shelton, et al.

2 A You are on which exhibit? I'm sorry.

3 Q Well, Exhibit Number 8. I think practically any of the  
4 pool exhibits will catch that well.

5 A Now, will you lead me back to that well?

6 Q It's in the northwest quarter of the northeast quarter  
7 of Section 6, 18 South, 28 East.

8 A The northeast quarter of the northeast quarter.

9 Q Northwest of the northeast.

10 A Oh, yes. All right. Mr. Shelton's.

11 Q Right.

12 A That's right. Yes, sir.

13 Q And according to this Exhibit Number 8, that is one of  
14 the non-participating tracts?

15 A We believe that's probably true, yes, sir.

16 Q That's surrounded by edge participating tracts?

17 A Yes.

18 Q Okay. Conceivably each one of these tracts could have  
19 a well on it providing twice the current top allowable?

20 A That's right.

21 Q Under that situation, will oil be drained from Mr.  
22 Shelton's tract and he be deprived of producing, or his  
23 chance to produce the oil-in-place under this tract?

24 A No.

25 Q This is based on the --

1 A Not, there will be no deprivation due to producing 284  
2 barrels a day from these wells. Would you like me to  
3 answer why or would you rather I not?

4 Q Well, yes, in just a second. Let me ask one more  
5 question first. Have you made an analysis such as --  
6 Never mind. Tell me why.

7 A You have to get your orientation away from, you know,  
8 we look, most of what we look at are solution gas drive  
9 reservoirs, right? And I will agree with you that the  
10 recovery there is very sensitive to rate, and this is  
11 the way our rules have been set up; but what we are  
12 talking about here is a gas-oil contact which moves  
13 down structure. And this is what determines the recovery  
14 from a well.

15 First, the movement of the cap down structure is  
16 what finishes off a well, because what we have got here  
17 is a reservoir that is well communicated both vertically  
18 and horizontally. Okay. Now, as a further corollary of  
19 this in terms of just simply voidage straight out,  
20 voidage per well, because the unit is reinjected 70  
21 percent of its produced gas.

22 On the average, it's voiding much less sputtage per  
23 well at 284 barrels a day than is an offsetting well  
24 producing at 142, because essentially we are reducing  
25 net voidage from unit wells by this reinjection of 70-odd

1 percent of the produced gas. Of course, the people that  
2 stay out of the unit are not participating in this, and  
3 they are not sharing in the expenditures, anything like  
4 this; but it will be the gas-oil contact which will gas  
5 out Mr. Shelton's well, not what we produce immediately  
6 offsetting him.

7 Q Now, you have shown on one of these exhibits twenty-six  
8 year life under primary production, twenty-four life  
9 under this unitized program.

10 A Yes, sir.

11 Q You think it will be practical to operate this unit for  
12 twenty-four years?

13 A This is actually, well, I don't know. This is a twenty-  
14 four year total life. We assumed operation throughout.  
15 In other words, we ceased operating when we no longer  
16 could pay operating expenses in our projects. There  
17 was abandonment conditions.

18 Q I just wondered how much this might affect the ultimate  
19 recovery and the ultimate additional recovery in here if  
20 after ten years the economics of the situation  
21 deteriorated and you ceased to produce it this way. How  
22 much of this extra 30,000,000 barrels of oil would still  
23 be in the ground on recovery?

24 I didn't make myself clear on that. Let me  
25 describe what I mean. In order for you to recover the

1 full 30,000,000 barrels that you foresee here, you have  
2 made this calculation based on operating the unit to  
3 depletion, the twenty-four year life of the field. Now  
4 much of this extra 30,000,000 barrels is produced in those  
5 last years where it might reasonably shut down because  
6 of economics. It might get too expensive to operate.

7 A Actually very little. One or two percent, but the fact  
8 is we didn't shut it down till it became uneconomical.  
9 Can I discuss a little bit how this thing will go, I  
10 mean, how our model projections and our reservoir studies--

11 Q Yes. I'd like to have that information.

12 A Well, essentially what you do, you start replacing, well,  
13 you reduce voidage by 60 percent or so because you are  
14 reinjecting 70 percent of your produced gas, you see.  
15 That gas reduces the voidage from the reservoir. The  
16 effect of the reduction in voidage is to flatten the  
17 pressure decline.

18 In other words, the pressure is declining with time,  
19 as one of our earlier curves showed it. This curve will  
20 flatten in slope after you start injecting this gas and  
21 in fact it will happen virtually immediately to some  
22 extent. Okay. You go along and you continue to produce  
23 under unitized operation from the most efficient wells,  
24 the wells located where the oil column is the thickest.

25 You continue to do this throughout the life. You

1 allow the gas cap then to move uniformly down structure  
2 displacing this oil that is draining down to the low  
3 structure wells continually. At some point, and it's  
4 very near the end of the whole project, your gas-oil  
5 ratios get so high that it's uneconomic to continue  
6 injecting gas.

7 You are just producing too much gas because you have  
8 gradually moved your gas cap down until it's gassing out  
9 the very lowest structural wells. At this point, you  
10 have swept with your gas injection. You have allowed  
11 to drain down structure oil. You are at blow-down.  
12 That's what Reservoir Engineers call it.

13 And so you blow the reservoir down to a pressure as  
14 low as you can get it. And as long as gas is coming out,  
15 you are selling that gas. And so you continue to  
16 produce it right on down to a very low pressure. You  
17 deplete the reservoir in other words. But by this time  
18 your relative permeability situation is such that you are  
19 producing virtually all gas, you see, and very little oil  
20 continues to drain at this time.

21 Anyway, of course, the 30,000,000 barrels is a  
22 result of a calculation which projected this type of  
23 performance; and we would never abandon the reservoir  
24 until we were probably down to an extremely low pressure,  
25 because we would still be making money.

1 Q I believe that answers the question I had in mind.

2 A Okay.

3 Q I believe you indicated you did not use the model for  
4 calculations of oil-in-place; is that right?

5 A That's right. That's strictly determined from log  
6 analysis, core data, everything we could lay our hands on  
7 by the Engineering Committee as a group with all  
8 companies who wish to participate being represented by  
9 engineers and geologists working together to come up  
10 with this.

11 MR. STAMETS: Are there other questions of this  
12 witness? He may be excused. Mr. Hinkle, does that conclude  
13 your testimony?

14 MR. HINKLE: I believe it does. That's all we have  
15 to present.

16 MR. STAMETS: I believe we had another witness  
17 sworn. You are not going to put him on?

18 MR. MORRIS: No.

19 MR. STAMETS: Are there any other appearances in  
20 this case? Does anybody wish to put on testimony? We will  
21 call then for statements.

22 We have got a whole flock of telegrams. Let us  
23 read those first and then everybody can get organized while  
24 we are doing that.

25 MR. CARR: The text of all of these are virtually

1 the same. I will read one and read the names of those who  
2 sent us the various wires. It reads, "As a working interest  
3 owner on State-owned lands in the Empire-Abo Field, I object  
4 to the formation of the unit under the present participation  
5 factors. My interest and the State's royalty would be  
6 reduced approximately one-half under the proposed factors."  
7 It is signed Edward Egbert.

8 We have also received them from Hanover Planning,  
9 Incorporated; Hanagan & Hanagan; Penroc Oil Corporation; Monroe  
10 Roberts; W. V. Roberts; B. W. Broadbush; J. F. Pritchett;  
11 Clarence H. Albaugh; John C. Ryan; Jean Blanc and James Blanc;  
12 Bruce Clampton; Joe D. Denton; and F. M. Late Oil Company.

13 And also, Walter Crockett, Bill J. Rogers, and  
14 Cactus Drilling Corporation.

15 MR. STAMETS: Mr. Kellahin, I believe you stood for  
16 a statement.

17 MR. KELLAHIN: If the Examiner please, Jason  
18 Kellahin, Kellahin & Fox, Santa Fe. I entered my appearance.  
19 I'm representing Cities Service Oil Company, Samedan Oil  
20 Corporation, Penroc, C & K, Fred Turner, and V. P. Shelton.  
21 Needless to say my clients are less enchanted with the  
22 Participation Formula than are Arco and Amoco. And while we  
23 do not object to the formation of the unit and we eventually  
24 feel that such a procedure is necessary, we do object to the  
25 Participation Formula.

1 Cities Service Oil Company operates 11 wells on  
2 seven leases in the proposed Empire-Abo unit.

3 Cities Service is not opposed to unitization nor to  
4 the proposed pressure maintenance project. As of this date,  
5 Cities has not committed any of its operated leases to the  
6 unit but believe certain safeguard rules should be included  
7 in an order to protect the non-unitized leases.

8 Cities feels that it is the duty of the Oil  
9 Conservation Commission to protect correlative rights of the  
10 non-unitized leases and offers the following: Number 1. No  
11 producing wells direct or diagonal offsets to non-unit wells  
12 should produce more than a normal forty-acre allowable for  
13 the field unless the operator of the non-unit well signifies  
14 no objection by waiver and the transfer of additional allowable  
15 be approved by the New Mexico Oil Conservation Commission.

16 Number 2. Injection wells should be located at  
17 least two regular locations from a non-unit lease unless the  
18 operator of the non-unit lease indicates no objection by  
19 waiver and the injection location is approved by the New Mexico  
20 Oil Conservation Commission.

21 I believe there is one of Arco's witnesses who  
22 testified that this is the procedure that they propose to  
23 follow, but we would ask that it be included in the order.

24 Samedan Oil Corporation signed by the other  
25 operators whom I am representing feel that they would suffer a

1 serious loss by joining this unit.

2 If Samedan Oil Corporation were to join the proposed  
3 Empire Abo Unit, it would suffer both loss of ultimate and  
4 current income. Samedan's interest in the proposed Unit is in  
5 Tracts 49 and 79 as shown on Exhibit "B" of the Unit  
6 Agreement (1-1-72). Atlantic Richfield's study indicates the  
7 following: Tract 49, Samedan-Walker State No. 1, Royalty  
8 Owner - State of New Mexico, had primary oil reserves on 1-1-73  
9 of 400,379. Tract 79, Chambers & Kennedy-Abo No. 1, Royalty  
10 Owner - State of New Mexico, had primary Oil Reserves in 1-1-73  
11 of 404,385. These are Atlantic Richfield's remaining primary  
12 oil reserves (1-1-71) less 1971 and 1972 oil production.

13 Samedan's share of this forecasted reserve is  
14 347,652 barrels of oil.

15 Samedan's share of the unitized reserve under the  
16 proposed participation is 335,946 barrels of oil which includes  
17 the company's share of the predicted 30.1 million barrels of  
18 incremental secondary oil.

19 Samedan would be required to invest \$20,615.00 in  
20 the unit operation to recover 11,706 less barrels of oil.

21 Phase I is defined as the first eleven (11) million  
22 barrels of oil produced after the effective date of the Unit.  
23 According to the updated Engineering Report furnished by  
24 Atlantic Richfield on November 21, 1972, Phase I will have a  
25 duration of 9.5 months. We estimate our two (2) wells to be

1 top allowable for another 3.75 years before commencing decline.  
2 During this 3.75 year period Samedan will lose 47,882 barrels  
3 of oil by joining the Unit.

4 Therefore, Samedan has no incentive to join this  
5 Unit and wishes to register opposition to its formation under  
6 the formula that has been adopted.

7 The quality of the reef pay varies widely across  
8 the length of the reservoir as depicted by the thirteen (13)  
9 bands that were used in the model studies. Permeability, or  
10 the capacity to produce, ranges from 12 to 195 millidarcies  
11 from west to east. It is noted that forty-seven percent  
12 (47%) of the total tracts and thirty-eight percent (38%) of  
13 the productive tracts inside the Unit outline are not capable  
14 of producing top allowable as set out in the annual "Report of  
15 the New Mexico Oil and Gas Engineering Committee" for the  
16 Calendar Year of 1971. The majority of the future productivity  
17 must come from an area between the west edge of Section 2,  
18 Township 18 South, Range 27 East and the Center of Section 25,  
19 Township 17 South, Range 29 East. Allowable transfers will  
20 hasten the recovery from this area as migration of oil continues.  
21 Anyone owning an interest in a well in this area not receiving  
22 sufficient incentive to join the proposed Unit could not  
23 protect their correlative rights with the increased withdrawals  
24 due to allowable transfer. Likewise, normal migration of oil  
25 would be severely altered resulting in loss of ultimate oil

1 recovery by a non-unit well.

2 Further damage would be experienced if gas  
3 injection were permitted in the vicinity of a non-unit well due  
4 to gas coning. This gas coning concept was developed in the  
5 Engineering Report in arriving at maximum safe oil producing  
6 rates as well as predicted future oil reserves.

7 We ask that this Commission give due consideration  
8 to approving the items of recommendation set out below as  
9 protection to those Royalty and Working Interest Owners not  
10 having sufficient incentive to join the proposed Unit.

11 We make the following recommendations:

12 1. All unit wells which directly or diagonally  
13 offset any non-unit well, all of which are producing from the  
14 same common source of supply, be restricted to produce an amount  
15 of oil equal to the top well allowable.

16 2. Top unit allowable shall be equal to the sum of  
17 the individual unit well allowables providing the allowable  
18 assigned to any well which is shut-in, which allowable is to  
19 be transferred to any well or wells in the unitized project area  
20 for production, shall in no event be greater than its ability  
21 to produce during the final 24-hour period of a 72-hour test,  
22 or greater than the current top well allowable for the pool  
23 during the month of transfer, whichever is less.

24 3. The injection of gas into any unit well not be  
25 permitted within 2,640 feet in any direction from the boundary

1 of any non-unit tract.

2 4. The following be made a provision and included  
3 as part of the Commission Order: If it is apparent, as  
4 pointed out by any non-joining party, that correlative rights  
5 are not being protected, that the Commission agree to consider  
6 what other measures are necessary for such protection.

7 I think that states the position of a number of non-  
8 participating operators in this pool; and as read off by Mr.  
9 Carr, I believe there were some 18 that have seen fit to file  
10 telegrams on this. And I ask that the Examiner give  
11 consideration to these objections.

12 MR. MORRIS: If the Examiner please, Signal Oil and  
13 Gas Company also recognizes the desirability of unitizing this  
14 pool. We find ourselves in the position of being opposed to  
15 unitization in its present form and under the Unit Participation  
16 Formula as proposed in the presently proposed Unit Agreement  
17 as presented here today by Atlantic Richfield. For this  
18 reason, we are opposed to the Commission's approval of the  
19 unit or of the pressure maintenance project at this time.

20 We think it apparent that the correlative rights  
21 of all operators in this pool have not adequately been  
22 considered in the proposed Allocation Formula. We believe this  
23 is very obvious through the admission finally of Atlantic's  
24 witness that the interests of Signal Oil and Gas Company under  
25 the proposed Participation Form a would be 300,000 barrels of

1 oil less than what Signal could expect to receive from  
2 primary production continued ununitized.

3 We think as a minimum, we should be allowed to  
4 join a unit under a Participation Formula that would allow us  
5 to at least produce that which we would be entitled to produce  
6 under continued primary operations. We would observe that  
7 Atlantic has not provided the Commission with any evidence  
8 concerning the extent of the correlative rights of the various  
9 operators involved in this proceeding, and we submit that the  
10 Commission does not have sufficient evidence in the record  
11 before it upon which it can approve the proposed Unit Agreement  
12 and pressure maintenance project, because it is the Commission's  
13 duty to protect correlative rights. And there is no evidence  
14 in the record to define what the correlative rights of the  
15 parties are.

16 Should the Commission determine to approve the  
17 Unit Agreement, we concur with the recommendations that were  
18 read by Mr. Kellahin on behalf of Samedan Oil Corporation, his  
19 recommendations 1, 2, 3, and 4. Thank you.

20 MR. LOSEE: Mr. Examiner, I earlier appeared for  
21 Yates Petroleum Corporation and its related interests. At  
22 this time, they have not ratified the Unit Agreement; and they  
23 hold approximately 5 percent of the Participation Formula under  
24 Phase 1 and Phase 2. Yates does not oppose the unitization in  
25 principal, but at this point in time a problem remains unsolved

1 to which we would like to call the Commission's attention.

2 Arco conducted a study which found that it would be  
3 more economic for the working interest owners to unitize the  
4 field without gas injection than it would be with gas injection.  
5 The requirement or the proposal here to inject gas into the  
6 reservoir through seven or eight wells is a requirement of the  
7 United States.

8 The problem arises by virtue of the fact that the  
9 two gas plants in the area, one, the Abo Plant, owned 50 percent  
10 by Arco and 50 percent by Amoco, who are 64 percent interest  
11 owners in the unit; and they take two-thirds of the gas  
12 presently from the unit; and the Phillips Plant takes the  
13 balance.

14 Under existing contracts each of these plants are  
15 only required to deliver residue gas for repressuring at  
16 somewhere between 15 and 25 pounds, although these plants do  
17 operate at and can deliver the residue gas at 700 pounds without  
18 any further compression. Now, although Yates has brought this  
19 matter to the attention of the Unit Operator in an effort to  
20 find a solution to get a satisfactory contract or a proposal  
21 whereby the unit takes over the Abo Plant, at this point in  
22 time, no solution has been offered. There is no protection  
23 for the other working interest owners who have committed their  
24 interest that gas for repressuring can be furnished at a  
25 reasonable price.

1                   Until this protection is offered or a solution is  
2 found for this problem, Yates will not be in a position to  
3 ratify the unit.

4                   MR. STAMETS: Are there other statements? Mr. Landis?

5                   MR. LANDIS: If it please the Examiner, the working  
6 interest owners of the Empire-Abo Field have worked together  
7 now voluntarily and diligently for a period of five and one  
8 half years to provide a depletion program for this reservoir  
9 of highest order of conservation. The Amoco Production Company  
10 supports Atlantic Richfield Company's application in these  
11 efforts and urges this Commission to speedily approve the  
12 project as presented here today in the interest of preventing  
13 waste of the reservoir and increasing ultimate recovery. Thank  
14 you very much.

15                  MR. STAMETS: Are there other statements?

16                  MR. HINKLE: I think that all of the telegrams that  
17 were read and all of the protests that have been here represent  
18 the owners of the 7 percent which are shown on Exhibit A in  
19 green which is 21 forty-acre tracts and consists of 840 acres.

20                  Now, as Mr. Landis has pointed out, this has taken  
21 a long time to get this unit together. And the evidence shows  
22 that there were some 56 formulas considered, and every  
23 opportunity was given to the representatives of the working  
24 interest owners to participate in these meetings and to reach  
25 an agreement. This is a large unit, contains 11,339 acres and

1 it would be a miracle really if you could get all of the owners  
2 to agree 100 percent.

3 I think they have done real well to get the owners  
4 to agree as far as they have. As the evidence shows, it's  
5 anticipated that as a final result there will be approximately  
6 93 percent of all of the acreage committed to the unit. It  
7 clearly shows that by unitization there will be an additional  
8 recovery of some 30,000,000 barrels.

9 Now, as I see it, the prerogative of the Commission  
10 is only to approve the Unit Agreement as a conservation measure  
11 and to find that the application for the injection of gas and  
12 pressure maintenance is fair and reasonable and will not  
13 violate correlative rights. It's not grounds for this  
14 approval that some of the parties did not want to join in the  
15 unit. That's a privilege which is open in connection with any  
16 unit so long as we do not have forced unitization in the State.

17 So this is something they can do or not do. They  
18 have an opportunity to join. They have been invited to join  
19 and given every opportunity to participate; but if they want  
20 to stay out, of course, that's their privilege; but I do not  
21 believe that this small percentage of 7 percent should cause  
22 the Commission to turn down their approval of the unit and of  
23 the pressure maintenance which would in effect commit the  
24 waste of 30,000,000 barrels of oil. That's all.

25 MR. STAMETS: Okay. Are there no other statements?

We will take the case under advisement.

### REPORTER'S CERTIFICATE

I, JANET RUSSELL, a Court Reporter, do hereby certify that the foregoing and attached Transcript of Hearing before the New Mexico Oil Conservation Commission was reported by me; and that the same is a true and correct record of the said proceedings to the best of my knowledge, skill and ability.

WASHINGTON, D.C. 20242

AUG 10 1972

Atlantic Richfield Company  
P.O. Box 1610  
Midland, Texas 79701

Attention: Mr. R. E. Howard

Gentlemen:

Your application of November 18, 1971, revised by letters of January 14, 1972, and July 7, 1972, filed with the Area Oil and Gas Supervisor, Roswell, New Mexico, requests the designation of the Empire Abo unit area embracing 11,339.15 acres, more or less, Eddy County, New Mexico, as logically subject to operation under the unitization provisions of the Mineral Leasing Act, as amended.

Unitization is for the purpose of conducting more efficient operation with partial pressure maintenance by the injection of residue gas and will be limited to the Abo formation as defined by Section 2(h) of the unit agreement. You estimate that such operations will result in the recovery of approximately 30,000,000 barrels of additional oil.

The land requested, as outlined on your plat marked "Exhibit A, Empire Abo unit, Eddy County, New Mexico," is hereby designated as a logical unit area. In order that the land now included in the Chalf Bluff unit area may be incorporated into the Empire Abo unit agreement, the Chalf Bluff unit agreement should be terminated.

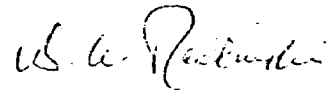

Your proposed form of unit agreement will be acceptable if modified as indicated. One marked copy of the form is returned herewith, one copy is being retained, and one copy is being sent to the Oil and Gas Supervisor, Roswell, New Mexico. We hereby concur in the Supervisor's recommendation that the proposed basis for allocating unitized production be accepted.

The format of the sample exhibits attached to the 1968 reprint of the Form of Unit Agreement for Unproved Areas should be followed closely, including the latest status of all acreage, in the preparation of Exhibits A and B.

In the absence of any objection not now apparent, a duly executed agreement conformed to the returned copy and approved by the appropriate officials of the State of New Mexico will be approved if submitted in approvable status within a reasonable period of time. However, the right is reserved to deny approval of any executed agreement that, in our opinion, does not have full commitment of sufficient lands to afford effective control of operations in the unit area. ✓

As the unit area contains State of New Mexico lands, we are sending a copy of this letter to the Commissioner of Public Lands of the State of New Mexico in Santa Fe. Please contact the State of New Mexico before soliciting joinders, regardless of prior contacts with or clearance from the State.

Sincerely yours,

Acting Director

# State of New Mexico

ALEX J. ARMIJO  
COMMISSIONER

## Commissioner of Public Lands

Re: Proposed Empire Abo Unit  
Eddy County, New Mexico

ATTENTION: Mr. W. L. Embry

Gentlemen:

We have reviewed the proposed unexecuted copy, as well as the modified copy by the USGS and exhibits for the captioned unit and find that it meets with the requirements of the Commissioner of Public Lands, therefore, the Commissioner approves the proposed agreement for the Empire Abo Unit as to form and content.

Your Exhibit "B" requires the following changes.

<u>TRACT NO.</u>	<u>CHANGE TO BE MADE</u>
48	Sec. 31-17S- <u>27E</u> (should be <u>28E</u> )
56	Sec. 28- <u>27S</u> -28E(should be <u>17S</u> )
57	Sec. 31-17S- <u>27E</u> (should be <u>28E</u> )
64	Sec. 31-17S- <u>27E</u> (should be <u>28E</u> )

Upon submitting this unit for final approval the following are required by this office:

1. Two executed copies of Unit Agreement-one must be an original
2. One copy of Operating Agreement
3. Two sets of all Ratifications from Lessees of Record and Working Interest Owners-one copy must be an original
4. Order of the Oil Conservation Commission
5. Initial Plan of Operation

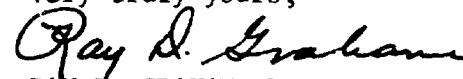

Atlantic Richfield Company  
August 30, 1972  
Page 2

6. Filing Fee in the amount of Three-Hundred (\$300.00) Dollars.
7. Re-designation of wells

In your final application we would also like for you to state all tracts qualified and verification that the Working Interest in the qualified tracts have been contacted and requested to join. Also, state all tracts committed and not committed to the unit.

If we may be of further service please do not hesitate to call on us.

Very truly yours,

RAY D. GRAHAM, Director

Re: Initial Plan of Operation  
Empire Abo Unit  
Eddy County, New Mexico

Gentlemen:

In compliance with Section 11 of the Unit  
Agreement, Empire Abo Unit, Eddy County,  
New Mexico, Atlantic Richfield Company, as

United States Department  
of the Interior  
Page 2  
April 25, 1973

Unit Operator on behalf of itself and the other participating working interest owners, hereby submits for your approval a Plan of Operation to cover the period beginning with the effective date of the Unit Agreement and extending through the remainder of calendar year 1973.

Yours very truly,

ATLANTIC RICHFIELD COMPANY .  
OPERATOR

  
P. E. Fletcher  
Operations Manager

PEF/SHC/jrb

INITIAL PLAN OF OPERATION  
EMPIRE ABO UNIT

1. Project Area

History and Background

The Empire Abo Unit area consists of some 11,339.15 acres in Eddy County, New Mexico (see attached plat, Exhibit 1). The area is located in portions of sections 34, 35, 36 Township 17 South, Range 27 East; sections 1, 2, 3, 4, 8, 9, 10, 11, 12, 15, 16, 17 Township 18 South, Range 27 East; sections 25, 26, 27, 28, 31, 32, 33, 34, 35, 36 Township 17 South, Range 28 East; sections 4, 5, 6 Township 18 South, Range 28 East; sections 29, 30 Township 17 South, Range 29 East. Within the Unit Area, owners of the following tracts have chosen not to participate in the unit: 2,6,42,46,49,55,56,69,73C,77,79,84,91. These non-participating tracts total ~~684.84~~ 640 acres. The remaining ~~10,654.31~~ 10,699.15 acres is to be developed as a project area for pressure maintenance by injection of plant residue gas from Abo production back into the Abo formation.

The Abo producing zone is found at an average depth of about 5800 feet (see attached type log, Exhibit 2). The Abo is a lower Leonard (Permian) carbonate reef which has undergone complete dolomitization. Vugs, fractures and fissures have been observed in cores throughout the main reef, with local anhydrite infilling sometimes restricting flow. Reef development is long (12 1/2 miles) and narrow (1 1/2 miles). The reef crest dips about 1° from southwest to northeast. Average gross reef thickness is about 300 feet, ranging to the maximum of 732 feet on the Amoco State AT No. 1 (L2-18S-27E).

On the up-dip west and southwest end of the reservoir productive limits are the result of anhydrite deposition, while on the back-reef north side there is a facies change to an impermeable carbonate "mud" interspersed with green shale. Limits to the south, east and northeast result as the top of the reef dips below the oil-water contact.

2. Current Production, Future Recovery

The original discovery well was the Amoco Malco Federal A No. 1, located in the NE NW Section 11, T-18-S - R-27-E, completed in November 1957.

At the present time the Pool has 235 producing wells. Of these, 153 are capable of producing more than the current top allowable of 142 BOPD/well. There are 183 flowing wells. Field performance and detailed study of cores indicate excellent vertical permeability. The principal producing mechanism is gravity drainage with an expanding secondary gas cap. There are 22 operators in the field and 112 separate working interest owners.

In January 1973, Abo Pool total oil production averaged 25,625 BOPD with 9% water production and gas oil ratio 1,366 cu. ft./BO. Cumulative oil production from the pool is 90 MMBO to February 1, 1973. Remaining primary after February 1, 1973, based on ARCO numeric model studies, is estimated to be 83 MMBO. Unitized residue gas injection for pressure maintenance is calculated to increase future recovery by about 30 MMBO compared to continued primary operations.

3. Basic Concepts Governing Future Unit Operations

- a) Field production history and reservoir numeric model studies have demonstrated that reservoir recovery is governed by a gravity drainage mechanism. With unitization, the operator will be able to maximize beneficial effects of this most efficient recovery mechanism by careful observation of well performance and shutting in or curtailing production from inefficient wells.
- b) Injection of plant residue gas will act toward pressure maintenance and orderly control of expansion of the secondary gas cap.

4. Special Rules

a) Unit Allowable

1st Step - Starting on the effective date of the unit, the unit will receive a unit allowable, calculated so that Unit Area reservoir voidage will not exceed average daily reservoir voidage rate for 1972. This will result in an increase from current 23,600 BOPD to about 30,000 BOPD for the Unit Area.

2nd Step - to be effective with the start of gas injection. Unit Area allowable to be 40,192 BOPD. Reservoir numeric model studies demonstrate added recovery and no reservoir waste at this rate.

- b) Provision to produce the unit allowable from the most efficient wells without restriction. The only exception will be where a Unit producing well offsets a non-unit well.
- c) Provision that if any unit well is located within 660' of a non-participating tract on which is located an Empire Abo producing well, such unit well will be allowed to produce no more than two times normal unit allowable for the Empire Abo Pool.
- d) Provision for administrative approval of additional injection wells, or changes in injection well locations.

#### 5. Operating Plans for 1973

Initially gas injection will be into the Abo gas cap in the following eight wells (see plat Exhibit 1):

<u>Current Operator</u>	<u>Lease &amp; Well</u>	<u>Location</u>
Exxon	Chalk Bluff Draw Unit "A" No. 4	NE/4 NW/4 Sec.9-T18S-R27E
Amoco	Windfohr Federal No. 4	NW/4 SE/4 Sec.4-T18S-R27E
Amoco	Malco "H" Federal No. 2	SE/4 NE/4 Sec.3-T18S-R27E
M.YatesIII	Dooley Abo State No. 2	NW/4 SE/4 Sec.36-T17S-R27E
Amoco	State "BM" No. 1	NE/4 SW/4 Sec.31-T17S-R28E
Amoco	State "BV" No. 1	SW/4 NW/4 Sec.32-T17S-R28E
Arco	M. Yates B (ARC) No. 8	SW/4 NE/4 Sec.33-T17S-R28E
Hondo	State "A" No. 21	NE/4 SW/4 Sec.26-T17S-R28E

Attached Exhibit 3 is an example of an injection well log, while Exhibit 4 is a schematic diagram of a typical mechanical setup for an injection well.

Maximum gas injection volume into all wells is estimated at 37,000 MCF/Day. In terms of reservoir space fill-up, this is equivalent to over 60,000 barrels of water injection per day. Plans are to pick up residue gas at about 700 psi and compress it to 2000 psi for injection. The gas will contain hydrogen sulfide. Superdehydration facilities are planned in order to minimize possible corrosion.

A rigorous corrosion checking procedure will be maintained.

A regular and comprehensive well-testing program will be followed to maintain reservoir control and aid in determining optimum operating conditions.

Workovers: Wherever well production data and reservoir conditions so indicate, workovers will be performed to lower gas-oil or water-oil ratios and maximize producing well efficiencies.

Facilities for produced water gathering and reinjection will be constructed.

Atlantic Richfield Company, as unit operator, will act prudently to preserve all rights of the mineral owners and to effectively and efficiently recover the unit area reserves. This Company will meet all economical offset obligations and act to prevent undue waste.

Modifications - It is understood that to meet changing conditions, this Plan of Operation may be modified from time to time, with the approval of the Supervisor, the Commissioner of Public Lands of the State of New Mexico and the New Mexico Oil Conservation Commission.

Effective Date:

This Plan of Operation shall be effective July 1, 1973.

If this Plan of Operation meets with your approval, please indicate in the space below and return one copy for our files.

Yours very truly,

ATLANTIC RICHFIELD COMPANY  
OPERATOR

(2) Note: Capacity well allowed to produce at any rate as long as  $V_{rt}(9a)/V_{rt}(9) \geq 1.0$ . When  $V_{rt}(9a)/V_{rt}(9) < 1.0$ , Daily Oil allowable of capacity well must be no greater than (2) x  $V_{rt}(9a)/V_{rt}(9)$  or (2) x (9b).

**Fluid Factors:** (based on Previous Reservoir Pressure Survey, 1343 psi, July, 1973):  
 Do, Oil Formation Volume Factor, Reservoir bbls./stock tank bbl=1.415  
 Bg, Gas Formation Volume Factor, Resv. bbls./thousand std cu ft =1.71  
 Rs, Solution gas-oil ratio, MCF/Stock tank bbl oil =0.795  
 Bw, Water formation volume factor, Resv bbls/stock tank bbl =1.0  
 Qo, Top per-well N.U.A., STBOPD = 142

**Basic Voldage Equations:** 1)  $V_r(hc) = Q_o (Bo/R_{pr}-Rs)Bg$ , Net hydrocarbon resv voldage, RVB/D; 1a.)  $R_{pn} = R_p (1.0-G_1/G_p)$ ; 2)  $V_{rw} = (Q_{wp}-Q_{we})B_w$ , Net resv space voided by wtr, RVB/D; 3)  $V_{rt} = V_{rh}c + V_{rw}$ , Total net reservoir space voided on daily basis.

\*  $R_p = 284 \text{ MCFPD}/Q_{o1}(2)$ , where 284 MCFPD is the daily gas limit, and  $Q_{o1}(2)$  is from Attach. I, Column (2).

Empire Abo Unit

Reservoir Voidage Formula:

Equation 1:  $V_{rvb} = Q_o (B_o + (R_{pn} - R_s) B_g) + (Q_{wp} - Q_{we}) B_w$

Where:

$V_{rvb}$  = Reservoir voidage, hbbls. per day  
 $Q_o$  = Oil production rate, Stock tank hbbls. per day  
 $B_o$  = Oil formation volume factor<sup>(1)</sup>, reservoir  
volumetric hbbls/stock tank bbl.  
 $R_{pn}$  = Net producing gas-oil ratio, MCF/S.T.B.O.

$$R_{pn} = R_p (1.0 - \frac{G_i}{G_p})$$

Where:  $R_p$  = producing gas-oil ratio, MCF/BO  
 $G_i$  = daily volume of gas injected, MCF/Day  
 $G_p$  = daily volume of gas produced, MCF/Day

$R_s$  = Solution gas-oil ratio<sup>(2)</sup>, MCF/STBO  
 $B_g$  = Gas formation volume factor<sup>(3)</sup>, RVB/MCF  
 $Q_{wp}$  = Water production rate, S.T.B.W./Day  
 $Q_{we}$  = Aquifer water influx rate, S.T.B.W./Day, determined  
from reservoir numeric model runs to be 1950 BWPD  
 $B_w$  = Water formation volume factor, RVBW/STBW, use 1.0

Solving Equation 1 for daily oil rate,  $Q_o$ ,

Equation 2: 
$$Q_o = \frac{V_{rvb} - (Q_{wp} - Q_{we}) B_w}{(B_o + (R_{pn} - R_s) B_g)}$$

(1), (2), (3): These values calculated from fluid analysis data.

J. In  
11/25/72  
Act

SAMEDAN VERTICAL SEPARATION  
PROPOSED UNIT: ABC UNIT  
LODY COUNTY, NEW MEXICO

If Samedan Oil Corporation were to join the proposed Virginia ABC Unit, it would realize both loss of valuable net current income. Samedan's interest in the proposed Unit is in Tracts 49 and 50 as shown on Exhibit "A" of the Unit Agreement (1-1-72). Atlantic Richfield's audit indicates the following:

<u>Tract</u>	<u>Operator and Lease</u>	<u>Royalty Owner</u>	<u>* Primary Oil Reserves 1-1-72</u>
49	Samedan-Walker State No. 1	State of New Mexico	400,379
50	Chambers & Kennedy-ABC No. 1	State of New Mexico	404,385

\* Atlantic Richfield's Remaining Primary Oil Reserves (1-1-71) less 1971 and 1972 oil production.

Samedan's share of this forecasted reserve is 347,652 barrels of oil.

Samedan's share of the unitized reserve under the proposed participation is 335,946 barrels of oil which includes the company's share of the predicted 30.1 million barrels of incremental secondary oil.

Samedan would be required to invest \$20,615.00 in the unit operation to recover 11,706 less barrels of oil.

Phase I is defined as the first eleven (11) million barrels of oil produced after the effective date of the Unit. According to the updated Engineering Report furnished by Atlantic Richfield on November 21, 1972, Phase I will have a duration of 9.5 months. We estimate our two (2) wells to be top allowable for another 3.75 years before commencing decline. During this 3.75 year period Samedan will lose 47,882 barrels of oil by joining the Unit.

Therefore, Samedan has no incentive to join this Unit and wishes to register opposition to its formation under the formula that has been adopted.

The quality of the reef pay varies widely across the length of the reservoir as depicted by the thirteen (13) bands that were used in the model studies. Permeability, or the capacity to produce, ranges from 12 to 195 millidarcies from west to east. It is noted that forty-seven percent (47%) of the total tracts and thirty-eight percent (38%)

of the productive tracts inside the Unit outline are not capable of producing top allowable as set out in the annual "Report of the New Mexico Oil and Gas Engineering Committee" for the Calendar Year of 1971. The majority of the future productivity must come from an area between the west edge of Section 2, Township 18 South, Range 27 East and the Center of Section 25, Township 17 South, Range 29 East. Allowable transfers will hasten the recovery from this area as migration of oil continues. Anyone owning an interest in a well in this area not receiving sufficient incentive to join the proposed Unit could not protect their correlative rights with the increased withdrawals due to allowable transfer. Likewise, normal migration of oil would be severely altered resulting in loss of ultimate oil recovery by a non-unit well.

Further damage would be experienced if gas injection were permitted in the vicinity of a non-unit well due to gas coning. This gas coning concept was developed in the Engineering Report in arriving at maximum safe oil producing rates as well as predicted future oil reserves.

We ask that this Commission give due consideration to approving the items of recommendation set out below as protection to those Royalty and Working Interest Owners not having sufficient incentive to join the proposed Unit.

Recommendations

1. All unit wells which directly or diagonally offset any non-unit well, all of which are producing from the same common source of supply, be restricted to produce an amount of oil equal to the top well allowable.
2. Top unit allowable shall be equal to the sum of the individual unit well allowables providing the allowable assigned to any well which is shut-in, which allowable is to be transferred to any well or wells in the unitized project area for production, shall in no event be greater than its ability to produce during the final 24-hour period of a 72-hour test, or greater than the current top well allowable for the pool during the month of transfer, whichever is less.
3. The injection of gas into any unit well not be permitted within 2,640 feet in any direction from the boundary of any non-unit tract.
4. The following be made a provision and included as part of the Commission Order: If it is apparent, as pointed out by any non-joining party, that correlative rights are not being protected, that the Commission agree to consider what other measures are necessary for such protection.

EMPIRE ABO POOL, EDDY COUNTY, NEW MEXICO  
FUTURE RECOVERY PROJECTIONS AS THEY AFFECT STATE OF NEW MEXICO LEASES

	Competitive Natural Depletion (Non- Unitized)	Operational Method Residue Gas Injection (Unitized)	Advantage of Unitized Case Over Non-Unitized Case
Pool Ultimate Oil Recovery (Percent of original oil-in-place)	45.0	52.9	+7.9
Pool Total Reserves After 7-1-73 (Bbls. Oil)	79,023,854	108,956,651	+29,932,797 (Reserve Increase: 37.9%)
State Leases Gross Reserves After 7-1-73 (Bbls. Oil)	60,734,252	77,702,773*	+16,968,521
12.5% Net Royalty Reserves for State Leases after 7-1-73 (Bbls. Oil)	7,591,781	9,712,847*	+ 2,121,066
Value of State Net Royalty Reserves After 7-1-73 (@ \$3.81/Bbl.)	\$28,924,686	\$37,005,947*	+\$8,081,261
Future Life After 7-1-73 (Years)	26	24	

\*Unitized Reserves are based on the proposed unit formula, which gives State leases the following share of a Field-wide Unit:

Phase I: 69.64897% (during first 11,000,000 BO after unitization)  
Phase II: 71.50243% (Thereafter)

NOTE: Calculated oil lost for each year delay, due to starting unit operations and gas injection at a lower reservoir pressure: 2,050,000 Bbls. Oil lost per year delay.

State of New Mexico share of this loss:

$(2,050,000)(.71315)(.125) = 182,834$  Bbls. oil reserves lost per year delay.

Value of this lost oil =  $(\$3.81)(182,834) = \$694,883$  lost to State per year delay.

BEFORE THE OIL CONSERVATION COMMISSION

STATE OF NEW MEXICO

APPLICATION OF ATLANTIC RICHFIELD  
COMPANY FOR APPROVAL OF A PRESSURE  
MAINTENANCE PROJECT FOR THE EMPIRE ABO  
POOL TO BE EMBRACED WITHIN THE EMPIRE  
ABO UNIT AREA CONSISTING OF 11,339.15  
ACRES IN TOWNSHIPS 17 AND 18 SOUTH,  
RANGES 27, 28 AND 29 EAST, EDDY COUNTY,  
NEW MEXICO, INCLUDING EIGHT GAS INJEC-  
TION WELLS AND FOR APPROVAL OF SPECIAL  
POOL RULES INCLUDING A PROJECT ALLOWABLE

*Pressure  
Maintenance*

*Case 4953*

Oil Conservation Commission  
Box 2088  
Santa Fe, New Mexico 87501

Comes Atlantic Richfield Company, acting by and through the undersigned attorneys, and hereby makes application for approval of a pressure maintenance project for the Empire Abo Pool to be embraced within the Empire Abo Unit Area consisting of 11,339.15 acres in Townships 17 and 18 South, Ranges 27, 28 and 29 East, Eddy County, New Mexico, including eight injection wells and for the approval of special pool rules including a project allowable, and in support thereof respectfully shows:

1. That there is filed herewith a plat showing the location of the proposed injection wells and the location of all other wells within a radius of 2 miles from the proposed injection wells and the formation from which said wells are producing or have produced. The plat also shows the boundaries of the proposed unit area and shows the owners of the oil and gas leases within an area of 2 miles of the proposed unit area.

2. As indicated by Exhibit "A" filed herewith, there are 8 proposed injection wells. All of the injection wells consist of presently producing wells to be converted to injection wells. All of said wells will be completed in such a way as to provide for the injection of gas into the gas zone of the Empire Abo Pool which includes the Abo formation. There are filed herewith logs of all the wells. There are also filed herewith diagrammatic sketches of all the proposed injection wells, showing all casing strings, including diameters and

DOCKET MAILED

Date 4-12-73

setting depths, quantities used and tops of cement, perforated or open hole intervals, tubing strings, including diameters and setting depths, and types and location of packers to be used.

3. The proposed pressure maintenance project is within the boundaries of the proposed Unit Agreement for the Empire Abo Unit Area and application has been filed for approval of the unit agreement by the Commission.

4. It is proposed to inject gas for increased recovery purposes into the Empire Abo Pool which includes the Abo formation only. The unit agreement identifies the top of the formation at 5325 feet on the Welex Radioactivity Log dated December 21, 1958 for the Amoco Production Company's State of New Mexico "AU" Well No. 1 located 1980 feet from the south line and 1830 feet from the west line of Section 2, Township 18 South, Range 27 East and the bottom of the formation at 6533 feet on the log.

5. That applicant proposes to inject Abo residue gas from the Amoco Empire Gasoline Plant and the Phillips Artesia Gasoline Plant and that it is anticipated that approximately 37,000 MCF per day will be injected after all wells which are to be converted to injection wells have been converted. Maximum wellhead injection pressure is to be approximately 2,000 psig.

6. That applicant also desires a project allowable to be approved, in accordance with Rule 701 of the Commission rules.

7. Applicant also submits an Initial Plan of Operation as provided by Paragraph 11 of the Unit Agreement, said Plan of Operation to include details of special field rules requested.

8. That the special pool rules to be adopted include a project allowable as well as provision for the administrative approval of the conversion of additional wells for injection purposes.

9. In the opinion of applicant, said pressure maintenance project will be in the interest of conservation, prevention of waste, the protection of correlative rights and will tend to promote the greatest ultimate recovery of oil and gas from that portion of the Empire Abo Pool covered by the project.

10. Applicant requests that this matter be set down for hearing at the examiner's hearing to be held on April 25, 1973.

Respectfully submitted,

ATLANTIC RICHFIELD COMPANY

- CASE 4950: Application of Monsanto Company for a dual completion, Eddy County, New Mexico. Applicant, in the above-styled cause, seeks authority to dually complete its Burton Flat Deep Unit Well No. 3 located in Unit V of Section 3, Township 21 South, Range 27 East, Eddy County, New Mexico, to produce gas from the Burton Flat-Morrow Gas Pool Extension and from an undesignated Strawn pool through parallel strings of tubing.
- CASE 4951: Application of Atlantic Richfield Company for compulsory pooling, Eddy County, New Mexico. Applicant, in the above-styled cause, seeks an order pooling all mineral interests underlying the N/2 of Section 15, Township 21 South, Range 26 East, Eddy County, New Mexico, to be dedicated to a well to be drilled by the applicant at a standard location to test the Morrow formation. Also to be considered will be the cost of drilling and completing said well and the allocation of the cost thereof as well as actual operating costs and charges for supervision. Also to be considered is the designation of applicant as operator and the risk involved in drilling said well.
- CASE 4952: Application of Atlantic Richfield Company for a unit agreement, Eddy County, New Mexico. Applicant, in the above-styled cause, seeks approval of the Empire Abo Unit Area comprising 11,339 acres, more or less of State and Federal lands in Townships 17 and 18 South, Ranges 27, 28, and 29 East, Eddy County, New Mexico.
- CASE 4953: Application of Atlantic Richfield Company for a pressure maintenance project, Eddy County, New Mexico. Applicant, in the above-styled cause, seeks authority to institute a pressure maintenance project in its Empire Abo Unit Area, Empire-Abo Pool, Eddy County, New Mexico, by the injection of gas into the Abo formation through eight wells in Section 36, Township 17 South, Range 27 East, Sections 3, 4, and 9, Township 18 South, Range 27 East, and Sections 26, 31, 32, and 33, Township 17 South, Range 28 East. Applicant further seeks the promulgation of special rules for the operation of said project, including provision for the assignment of special allowables to wells in the project area based on reservoir voidage factors, the shutting-in of less efficient wells, and volumes of gas injected.
- CASE 4954: Application of Chace Oil Company for pool creation and down-hole commingling, Rio Arriba County, New Mexico. Applicant, in the above-styled cause, seeks the creation of a new Gallup Oil Pool and Dakota Oil Pool for its Jicarilla 70 Well No. 3 located in Unit C of Section 33, Township 24 North, Range 4 West, Rio Arriba County, New Mexico. Applicant further seeks authority to commingle production from each of said pools in the well-bore of said well and the establishment of an administrative procedure for down-hole commingling of additional wells to be drilled in the area.
- CASE 4955: Application of Pierce & Dehlinger for a non-standard oil proration unit, or in the alternative, compulsory pooling, Lea County, New Mexico. Applicant, in the above-styled cause, seeks approval for

Order No. R-4549

*g l k*

APPLICATION OF ATLANTIC RICHFIELD  
COMPANY FOR A PRESSURE MAINTENANCE  
PROJECT, EDDY COUNTY, NEW MEXICO.

*[Signature]*

ORDER OF THE COMMISSIONBY THE COMMISSION:

This cause came on for hearing at 9 a.m. on April 25, 1973,  
at Santa Fe, New Mexico, before Examiner Richard L. Stamets.

NOW, on this June day of May, 1973, the Commission,  
a quorum being present, having considered the testimony, the record,  
and the recommendations of the Examiner, and being fully advised  
in the premises,

FINDS:

(1) That due public notice having been given as required by  
law, the Commission has jurisdiction of this cause and the subject  
matter thereof.

(2) That the applicant, Atlantic Richfield Company, seeks  
authority to institute a pressure maintenance project in the  
Empire-Abo Pool in its Empire-Abo Unit Area, Eddy County, New Mexico,  
by initially limiting reservoir voidage, and within one year by  
reinjection of approximately 70% <sup>percent</sup> of the produced gas, as plant  
residue gas, into the Abo formation through eight wells in Sec-  
tion 36, Township 17 South, Range 27 East, Sections 3, 4, and 9,  
Township 18 South, Range 27 East, and Sections 26, 31, 32, and 33,  
Township 17 South, Range 28 East.

(3) That the applicant further seeks the designation of the project area and the promulgation of special rules and regulations governing said project, including provision for the assignment of special allowables to wells in the project area based on reservoir voidage factors, net gas-oil ratios, the shutting-in or curtailment of less efficient wells, and allowable credit for gas injection wells.

(4) That initially the project area should comprise only the following described area:

EDDY COUNTY, NEW MEXICO

TOWNSHIP 17 SOUTH, RANGE 27 EAST, NMPM

Section 34: S/2 SE/4 ✓  
Section 36: S/2 ✓

TOWNSHIP 17 SOUTH, RANGE 28 EAST, NMPM

Section 6: NW/4, N/2 SW/4, N/2 SE/4, SW/4 SE/4, S/2 NE/4, and NE/4 NE/4 ✓

(5) That the applicant has been a major operator in the Empire-Abo Pool and that with a majority of the other operators in said pool has conducted extensive reservoir evaluations and studies in and of said pool.

(6) That said evaluations and studies show that the Empire-Abo Pool will be more efficiently produced through the curtailment of production from high gas-oil ratio wells or by reinjection of plant residue gas, or both, and operation of the pool on a net <sup>voidage</sup> reservoir basis.

(7) That said evaluations and studies show that production from the project area as described in Finding (4) of this order should be limited to the average reservoir voidage for the project area for the calendar year 1972 or 30,000 barrels of oil per day, whichever is less, except that after reinjection <sup>of approximately</sup> ~~of approximately~~ <sup>70% of</sup> ~~70% of~~ the produced gas <sup>has been achieved,</sup> ~~is instituted~~ the production from said project area should be limited to the average reservoir voidage for the calendar year 1972 or 40,192 barrels of oil per day, whichever is less.

(8) That to provide incentive for the reinjection of produced gas prior to achievement of the full 70 percent reinjection planned, production in excess of the aforementioned 30,000 barrels per day should be

<sup>11</sup>  
(10) That special rules and regulations for the operation of the ARCO Empire-Abo Unit Pressure Maintenance Project should be promulgated and, for operational convenience, such rules should provide certain flexibility in authorizing the production of the project allowable from any well or wells in the project area in any proportion, provided that no well in the project area which directly or diagonally offsets a well not committed to said unit producing from the same common source of supply should be allowed to produce more than two top unit allowables for the Empire-Abo Pool.

<sup>12</sup>  
(11) That approval of the application for a pressure maintenance project and the proposed special rules therefore is in the interest of sound conservation practices and will not cause waste or harm correlative rights.

IT IS THEREFORE ORDERED:

(1) That the applicant, Atlantic Richfield Company, is hereby authorized to institute a pressure maintenance project in the Empire-Abo Pool in its Empire-Abo Unit Area, Eddy County, New Mexico, to be designated the ARCO Empire-Abo Unit Pressure Maintenance Project, initially by the shutting in or curtailment of production from less efficient wells within the project and within 12 months after the effective date of this order by the reinjection of approximately 70<sup>percent</sup> of the produced gas, as plant residue gas, into the Abo formation, through the following described wells:

<u>OPERATOR</u>	<u>LEASE NAME</u>	<u>WELL NO.</u>	<u>SECTION</u>	<u>LOCATION</u>
Amoco	Malco "H" Federal	2	3	H
Amoco	Windfuhr Federal	4	4	J
Exxon	Chalk Bluff Draw Unit "A"	4	9	C

All in Township 18 South, Range 27 East, NMPM.

M. Yates III	Dooley Abo State	2	36	J
--------------	------------------	---	----	---

In Township 17 South, Range 27 East, NMPM.

Hondo	State "A"	21	26	K
Amoco	State "BM"	1	31	K
Amoco	State "BV"	1	32	F
Arco	M. Yates B (ARC)	8	33	G

All in Township 17 South, Range 28 East, NMPM.

(2) That the injection should be through 2 3/8-inch internally coated tubing installed in a packer set within 100 feet of the uppermost perforations, and that the casing-tubing annulus should be fitted with a pressure gauge in order to determine leakage in the casing, tubing, or packer.

(3) That Special Rules and Regulations governing the operation of the ARCO Empire-Abo Unit Pressure Maintenance Project, Eddy County, New Mexico, are hereby promulgated as follows:

Case No. 4953  
Order No. R-

SPECIAL RULES AND REGULATIONS  
FOR THE  
EMPIRE-ABO PRESSURE MAINTENANCE PROJECT

RULE 1. The project area of the ARCO Empire-Abo Unit Pressure Maintenance Project, hereinafter referred to as the Project, shall comprise the area described as follows:

EDDY COUNTY, NEW MEXICO

*ckd OK*

RULE 2. The allowable for the Project shall be the sum of the allowables of the several wells within the project area, including those wells which are shut~~in~~ curtailed, or used as injection wells. Allowables for all wells shall be determined in a manner hereinafter prescribed.

RULE 3. That the maximum daily project allowable shall be an amount of oil which will result in reservoir voidage no greater than the average daily reservoir voidage in the project area for the calendar year 1972 or 30,000 barrels of oil per day, whichever is less, except that after reinjection <sup>of approximately</sup> ~~of approximately~~ <sup>70 percent</sup> ~~70 percent~~ has been achieved <sup>70 percent</sup> ~~70 percent~~ of the produced gas <sup>is instituted</sup> ~~is instituted~~ the maximum daily project allowable shall be an amount of oil which will result in reservoir voidage no greater than the average daily reservoir voidage for the project area for the year 1972 or 40,192 barrels of oil per day, whichever is less.

RULE 4. That after gas reinjection has commenced but before the full 70 percent reinjection has been achieved, ~~additional~~ allowable in addition to the above-described 30,000 barrels per day may be assigned to the project area, provided that said allowable shall be computed in accordance with <sup>Rule 10, below and</sup> the following formula and shall not exceed 10,192 barrels of oil per day:

$$\text{Additional Allowable, BOPD} = 97.07 \left[ 2 \left( \frac{\text{MCF gas inj. previous month} \times 10}{\text{MCF gas prod. previous month}} \right)^2 + \left( \frac{\text{MCF gas inj. previous month} \times 10}{\text{MCF gas prod. previous month}} \right) \right]$$

for the pool during the month of transfer, whichever is less.

RULE 8. The allowable credit assigned to any injection well on a 40-acre proration unit shall be top unit allowable for the Empire-Abo Pool.

RULE 9. The allowable credit assigned to any well which is shut in or curtailed in accordance with Rule 6, shall be determined by a 24-hour test at a stabilized rate of production, which shall be the final 24-hour period of a 72-hour test throughout which the well should be produced in the same manner and at a constant rate. The daily tolerance limitation set forth in Commission Rule 502 I (a) and the limiting gas-oil ratio (2,000 to 1) for the pool shall be waived during such tests. The project operator shall notify all operators offsetting the well, as well as the Commission, of the exact time such tests are to be conducted. Tests may be witnessed by representatives of the offsetting operators and the Commission, if they so desire.

RULE 10. The allowable credit for residue gas injection shall be calculated in accordance with the appropriate fluid properties current in the reservoir <sup>(as determined in accordance with Attachment "B" to this Order)</sup> and shall be shown on the Pressure Maintenance Project Operator's Monthly Report.

RULE 11. The basic allowable assigned to each producing well in the Project shall be equal to the well's ability to produce or to top unit allowable for the pool, whichever is less. Wells capable of producing more than top unit allowable may also receive transfer allowable, provided however, that no producing well in the project area which directly or diagonally offsets a well not committed to the unit producing from the same common source of supply shall receive an allowable or produce in excess of two times top unit allowable for the pool.

RULE 12. Each month the project operator shall submit to the Commission a Pressure Maintenance Project Operator's Report, on a form prescribed by the Commission, outlining thereon the data required, and requesting allowables for each of the several wells in the Project as well as the total project allowable.

The aforesaid Pressure Maintenance Project Operator's Report shall be filed in lieu of Form C-120 for the Project.

RULE 13. The Commission shall, upon review of the report and after any adjustments deemed necessary, calculate the allowable for each well in the Project for the next succeeding month in accordance with these rules. The sum of the allowables so calculated shall be assigned to the Project and may be produced from the wells in the Project in any proportion except that no well in the Project which directly or diagonally offsets a well not committed to the unit producing from the same common source of supply shall produce in excess of two times top unit allowable for the pool.

RULE 14. The Secretary-Director of the Commission is hereby authorized to approve such additional producing wells and injection wells at orthodox and unorthodox locations within the boundaries of the ARCO Empire-Abo Unit Area as may be necessary to complete an efficient production and injection pattern, provided said wells are drilled no closer than 660 feet to the outer boundary of said unit nor closer than 10 feet to any quarter-quarter section or subdivision inner boundary and provided that no well shall be approved for gas injection when such well is located closer than <sup>1650</sup> ~~1650~~ feet to a tract which is not committed to the unit and on which is located a well producing from the same common source of supply. To obtain such approval, the project operator shall file proper application with the Commission, which application, if it seeks authorization to convert additional wells to injection or to drill additional production or injection wells shall include the following:

1650'

not

The aforesaid Pressure Maintenance Project Operator's Report shall be filed in lieu of Form C-120 for the Project.

RULE 13. The Commission shall, upon review of the report and after any adjustments deemed necessary, calculate the allowable for each well in the Project for the next succeeding month in accordance with these rules. The sum of the allowables so calculated shall be assigned to the Project and may be produced from the wells in the Project in any proportion except that no well in the Project which directly or diagonally offsets a well not committed to the unit producing from the same common source of supply shall produce in excess of two times top unit allowable for the pool.

RULE 14. The Secretary-Director of the Commission is hereby authorized to approve such additional producing wells and injection wells at orthodox and unorthodox locations within the boundaries of the ARCO Empire-Abo Unit Area as may be necessary to complete an efficient production and injection pattern, provided said wells are drilled no closer than 660 feet to the outer boundary of said unit nor closer than 10 feet to any quarter-quarter section or subdivision inner boundary and provided that no well shall be approved for gas injection when such well is located closer than <sup>1650</sup> ~~1650~~ feet to a tract which is not committed to the unit and on which is located a well producing from the same common source of supply. To obtain such approval, the project operator shall file proper application with the Commission, which application, if it seeks authorization to convert additional wells to injection or to drill additional production or injection wells shall include the following:

1650'

not

(1) A plat <sup>lands committed to the unit agreement and those lands not committed to said agreement, and showing the</sup> showing the location of the proposed well, all wells within the <sup>identifying A</sup> project area, and offset operators. locating wells which offset the project area.

(2) A schematic drawing of the proposed well which fully describes the casing, tubing, perforated interval, and depth.

(3) A letter stating that all offset operators to the proposed well have been furnished a complete copy of the application and the date of notification.

The Secretary-Director may approve the proposed well if, within 20 days after receiving the application, no objection to the proposal is received. The Secretary-Director may grant immediate approval, provided waivers of objection are received from all offset operators.

RULE 15 Expansion or contractions of the project area may be approved by the Secretary-Director of the Commission administratively when good cause is shown therefor.

(4) That jurisdiction of this cause is retained for the entry of such further orders as the Commission may deem necessary.

DONE at Santa Fe, New Mexico, on the day and year hereinabove designated.

~~to a plat of the unit area, identifying thereon the project area and also those tracts not committed to the unit, and showing the location of all wells within the unit area.~~

Reservoir Voidage Formula:

Equation 1:  $V_{rvb} = Q_o \left[ B_o + (R_{pn} - R_s) B_g \right] + (Q_{wp} - Q_{we}) B_w$

Where:

- $V_{rvb}$  = Reservoir voidage, bbls. per day  
 $Q_o$  = Oil production rate, Stock-tank bbls. per day

Re: Gasoline Plants  
Empire-Abo Pool  
Eddy County, New Mexico

Gentlemen:

Your attention is called to Order No. R-4549, as amended by Order No. R-4549-B, which authorized Atlantic Richfield Company to conduct pressure maintenance operations in the Empire-Abo Pool by the injection of residue gas produced by your gasoline plants from the raw Empire-Abo casinghead gas.

Your attention is particularly invited to that paragraph of amended Rule 4 of the Project Rules (as contained in Order No. R-4549-B) wherein "Available Residue Gas" is defined as being all gas produced from the unitized formation less plant shrinkage, plant fuel, and lease fuel required for operation of the lease, and to the next paragraph which provides that no raw gas nor plant residue gas attributable to the project shall be sold or otherwise disposed of by any means other than injection into the unitized formation except during emergency situations of temporary nature.

We recognize that it will be difficult to determine that volume of residue gas which can be attributed to the project after deduction of shrinkage and plant fuel, particularly where gas from other pools or projects is also going into the plant, but this figure will be necessary to permit application of the project's allowable formula.

We therefore request that Amoco, in preparing Sheet 1 of Form C-111 for its Empire Abo Gasoline Plant, and Phillips, in preparing

Amoco Production Company  
Phillips Petroleum Company

-2-

July 12, 1974

Sheet 1 of Form C-111 for its Artesia Gasoline Plant, fill out an additional Sheet 1 of Form C-111 for casinghead gas from the ARCO project area only, showing ARCO project gas taken, and making your best estimate of plant fuel, shrinkage, manufactured products, etc., which should be attributed to the ARCO project gas. Also to be shown, of course, would be the volume of residue returned to ARCO for injection.

Your cooperation in providing this information to the Commission will be greatly appreciated, as it is our belief that only with this data available will we be able to help make this important project a success.

Very truly yours,

A. L. PORTER, Jr.

Attention: Mr. C. R. Leggett, Jr.

Re: Emergency Holding Pits  
Empire-Abo Pool  
Eddy County, New Mexico

Gentlemen:

Reference is made to your letter dated June 18, 1974, wherein you requested a permit to construct four nylon-reinforced neoprene lined emergency holding pits at four new tank batteries now under construction for the Empire Abo Unit, Empire-Abo Pool, Eddy County, New Mexico.

Atlantic Richfield Company is hereby authorized to construct and utilize the aforesaid pits as proposed subject to the following provisions:

1. The automatic lease shut-down equipment and alarm alert system on each battery shall be installed and maintained in good working order to minimize the possibility of the emergency overflow pits being needed.
2. The oil overflow lines to the pits shall not be connected until the permanent pumps (P-2 on Drawing No. E-P-154) have been installed and are operative.
3. The 4-inch line labeled "Future Inlet" on Drawing No. E-P-154 shall not be connected without prior approval from this office.
4. No deliberate flow of oil into the pits shall be permitted.

OIL CONSERVATION COMMISSION

P. O. BOX 2088

SANTA FE, NEW MEXICO 87501

Atlantic Richfield Company

-2-

July 11, 1974

5. At any time an emergency situation occurs, causing oil to overflow into an emergency holding pit, the Artesia District Office of the Commission shall be immediately notified. All oil shall be removed from the pit within 12 hours after the LACT resumes pipe line shipments.

It is the Commission's belief that the systems as proposed, if operated in accordance with the above provisions, are in the interest of conservation and will prevent waste. Further, that if proper attention and maintenance is given the systems, and if immediate evacuation of the pits is made after use, that they will be environmentally beneficial.

The Commission does reserve the right to rescind this approval if it appears that excessive or negligent use is being made of the pits.

Very truly yours,

A. L. PORTER, Jr.  
Secretary-Director

June 18, 1974

*Gordon Summers*  
*(915) 682 8631*Mr. D. S. Nutter, Chief Engineer  
New Mexico Oil Conservation Commission  
P. O. Box 2088  
Santa Fe, New Mexico 87501

Dear Sir:

Atlantic Richfield Company is requesting a permit to construct four nylon reinforced neoprene lined emergency holding pits at four new batteries now under construction for the Empire Abo Unit located in the Empire Abo Field, Eddy County, New Mexico.

Three sets of drawings showing the details of the proposed lined pits are attached to this letter. These drawings are entitled as follows:

<u>Drawing No.</u>	<u>Title</u>
E-P-154	Lined Pit Layout and Piping
B-P-63, Sh. 8 of 14	Piping Outside Battery Limits, Btty. "H"
B-P-63, Sh. 10 of 14	Piping Outside Battery Limits, Btty. "J"
B-P-63, Sh. 11 of 14	Piping Outside Battery Limits, Btty. "K"
B-P-63, Sh. 12 of 14	Piping Outside Battery Limits, Btty. "L"

Each lined pit will be kept empty to insure sufficient capacity for emergency overflow from the three 1000 barrel oil tanks at each battery. There is a high oil tank level lease shutdown control at each battery to shut-in all wells producing into this battery, should the three 1000 barrel oil tanks fill to a predetermined high level. An alarm is actuated before this fill-up occurs to alert the field operators that a system malfunction, such as an LACT Unit failure, has occurred. These oil tanks are also equipped with an overflow line to the proposed lined pit so that in the event of a malfunction to the high oil tank level lease shutdown control, oil will flow to the lined pit instead of overflowing into the battery dike, creating a serious fire hazard, a safety hazard to the operating personnel and a major clean-up job.

Mr. D. S. Nutter  
Page Two  
June 18, 1974

As soon as the system malfunction has been corrected the emergency lined holding pit will be emptied by pumping the contained oil back through the treating system and sold to the pipe line through the LACT Unit.

All battery vessel drains are also connected to the lined pit. This oil will be recirculated through the heater treaters using the pump permanently located at each lined pit. Any basic sediment or non pipeline oil remaining in the lined pit will be sold to a reclaiming company so that the lined pit will be kept empty for emergency use when required.

The nylon reinforced neoprene liner will be purchased from the Misco Supply Company, Wichita, Kansas. Atlantic Richfield has used many of these liners in Kansas and Oklahoma with success. This liner was recommended by the Atlantic Richfield Research Center Chemical Engineering Section after tests were made to determine its resistance to saturated hydrocarbon fluids and chemical and acid wastes. Copies of Misco's specifications for the nylon reinforced neoprene liner are attached.

If any additional information or drawings are required by the Commission, Atlantic Richfield will be pleased to furnish them at your request.

Very truly yours,

BEFORE THE OIL CONSERVATION COMMISSION  
OF THE STATE OF NEW MEXICO

IN THE MATTER OF THE HEARING  
CALLED BY THE OIL CONSERVATION  
COMMISSION OF NEW MEXICO FOR  
THE PURPOSE OF CONSIDERING:

CASE NO. 4953  
Order No. R-4549

APPLICATION OF ATLANTIC RICHFIELD  
COMPANY FOR A PRESSURE MAINTENANCE  
PROJECT, EDDY COUNTY, NEW MEXICO.

ORDER OF THE COMMISSION

BY THE COMMISSION:

This cause came on for hearing at 9 a.m. on April 25, 1973, at Santa Fe, New Mexico, before Examiner Richard L. Stamets.

NOW, on this 15th day of June, 1973, the Commission, a quorum being present, having considered the testimony, the record, and the recommendations of the Examiner, and being fully advised in the premises,

FINDS:

(1) That due public notice having been given as required by law, the Commission has jurisdiction of this cause and the subject matter thereof.

(2) That the applicant, Atlantic Richfield Company, seeks authority to institute a pressure maintenance project in the Empire-Abo Pool in its Empire-Abo Unit Area, Eddy County, New Mexico, by initially limiting reservoir voidage, and within one year by reinjection of approximately 70 percent of the produced gas, as plant residue gas, into the Abo formation through eight wells in Section 36, Township 17 South, Range 27 East, Sections 3, 4, and 9, Township 18 South, Range 27 East, and Sections 26, 31, 32, and 33, Township 17 South, Range 28 East.

(3) That the applicant further seeks the designation of the project area and the promulgation of special rules and regulations governing said project, including provision for the assignment of special allowables to wells in the project area based on reservoir voidage factors, net gas-oil ratios, the shutting in or curtailment of less efficient wells, and allowable credit for gas injection wells.

(4) That initially the project area should comprise only the following described area:

Case No. 4953  
Order No. R-4549

EDDY COUNTY, NEW MEXICO

TOWNSHIP 17 SOUTH, RANGE 27 EAST, NMPM

Section 34: S/2 SE/4

Section 35: S/2

Section 29: S/2 NW/4 and N/2 SW/4

Section 30: SW/4, S/2 N/2, and N/2 SE/4

TOWNSHIP 18 SOUTH, RANGE 27 EAST, NMPM

Section 1: All

Section 2: S/2, NE/4 NE/4, SW/4 NE/4, S/2 NW/4, and NW/4 NW/4

Section 3: All

Section 4: SE/4, S/2 NE/4, S/2 SW/4, and NE/4 SW/4

Section 8: E/2 SE/4 and SE/4 NE/4

Section 9: All

Section 10: W/2 and NE/4

Section 11: NW/4, W/2 NE/4, and NE/4 NE/4

Section 15: N/2 NW/4 and SW/4 NW/4

Section 16: N/2, SW/4, N/2 SE/4, and SW/4 SE/4

Section 17: S/2 NE/4, NE/4 NE/4, SE/4 NW/4, NE/4 SW/4, and N/2 SE/4

TOWNSHIP 18 SOUTH, RANGE 28 EAST, NMPM

Section 4: N/2 NW/4, SW/4 NW/4, and NW/4 NE/4

Section 5: NE/4 and N/2 NW/4

Section 6: NW/4, N/2 SW/4, N/2 SE/4, SW/4 SE/4, S/2 NE/4, and NE/4 NE/4

(5) That the applicant has been a major operator in the Empire-Abo Pool and that with a majority of the other operators in said pool has conducted extensive reservoir evaluations and studies in and of said pool.

(6) That said evaluations and studies show that the Empire-Abo Pool will be more efficiently produced through the curtailment of production from high gas-oil ratio wells or by reinjection of plant residue gas or both, and operation of the pool on a net reservoir voidage basis.

Case No. 4953  
Order No. R-4549

(7) That said evaluations and studies show that production from the project area as described in Finding (4) of this order should be limited to the average reservoir voidage for the project area for the calendar year 1972 or 30,000 barrels of oil per day, whichever is less, except that after reinjection of approximately 70 percent of the produced gas has been achieved, the production from said project area should be limited to the average reservoir voidage for the calendar year 1972 or 40,192 barrels of oil per day, whichever is less.

(8) That to provide incentive for the reinjection of produced gas prior to achievement of the full 70 percent reinjection planned, production in excess of the aforementioned 30,000 barrels per day should be permitted within the project area. Said excess production should be computed in accordance with the following formula and should be limited to 10,192 barrels per day:

$$\begin{aligned} \text{Additional Allowable in} \\ \text{Excess of 30,000 BOPD} = 97.07 \left[ 2 \left( \frac{\text{MCF gas inj. previous month} \times 10}{\text{MCF gas prod. previous month}} \right)^2 \right. \\ \left. + \left( \frac{\text{MCF gas inj. previous month} \times 10}{\text{MCF gas prod. previous month}} \right) \right] \end{aligned}$$

(9) That the aforesaid pressure maintenance project, designated the ARCO Empire-Abo Unit Pressure Maintenance Project, and comprising the above-described area, is in the interest of conservation and should result in the recovery of approximately thirty million barrels of additional oil from said reservoir.

(10) That an administrative procedure should be established whereby said project area may be contracted or expanded for good cause shown and whereby additional injection wells and producing wells at orthodox and unorthodox locations in the project area may be approved without the necessity of notice and hearing.

(11) That special rules and regulations for the operation of the ARCO Empire-Abo Unit Pressure Maintenance Project should be promulgated and, for operational convenience, such rules should provide certain flexibility in authorizing the production of the project allowable from any well or wells in the project area in any proportion, provided that no well in the project area which directly or diagonally offsets a well not committed to said unit producing from the same common source of supply should be allowed to produce more than two top unit allowables for the Empire-Abo Pool.

(12) That approval of the application for a pressure maintenance project and the proposed special rules therefore is in the interest of sound conservation practices and will not cause waste or harm correlative rights.

Case No. 4953  
Order No. R-4549

IT IS THEREFORE ORDERED:

(1) That the applicant, Atlantic Richfield Company, is hereby authorized to institute a pressure maintenance project in the Empire-Abo Pool in its Empire-Abo Unit Area, Eddy County, New Mexico, to be designated the ARCO Empire-Abo Unit Pressure Maintenance Project, initially by the shutting in or curtailment of production from less efficient wells within the project and within 12 months after the effective date of this order by the reinjection of approximately 70 percent of the produced gas, as plant residue gas, into the Abo formation, through the following described wells:

<u>OPERATOR</u>	<u>LEASE NAME</u>	<u>WELL NO.</u>	<u>SECTION</u>	<u>LOCATION</u>

All in Township 17 South, Range 28 East, NMPM.

(2) That the injection should be through 2 3/8-inch internally coated tubing installed in a packer set within 100 feet of the uppermost perforations, and that the casing-tubing annulus should be fitted with a pressure gauge in order to determine leakage in the casing, tubing, or packer.

(3) That Special Rules and Regulations governing the operation of the ARCO Empire-Abo Unit Pressure Maintenance Project, Eddy County, New Mexico, are hereby promulgated as follows:

SPECIAL RULES AND REGULATIONS  
FOR THE  
EMPIRE-ABO PRESSURE MAINTENANCE PROJECT

RULE 1. The project area of the ARCO Empire-Abo Unit Pressure Maintenance Project, hereinafter referred to as the Project, shall comprise the area described as follows:

Case No. 4953  
Order No. R-4549

EDDY COUNTY, NEW MEXICO

TOWNSHIP 17 SOUTH, RANGE 27 EAST, NMPM

Section 34: S/2 SE/4  
Section 36: S/2

TOWNSHIP 17 SOUTH, RANGE 28 EAST, NMPM

Section 25: S/2 and S/2 N/2  
Section 26: S/2, S/2 NE/4, and SE/4 NW/4  
Section 27: N/2 S/2, SE/4 SE/4, and SW/4 SW/4  
Section 31: S/2 and S/2 N/2  
Section 32: S/2, NE/4, S/2 NW/4, and NE/4 NW/4  
Section 33: S/2, NE/4, S/2 NW/4, and NE/4 NW/4  
Section 34: N/2, SW/4, and N/2 SE/4  
Section 35: N/2 and N/2 S/2  
Section 36: N/2 NW/4 and SW/4 NW/4

TOWNSHIP 17 SOUTH, RANGE 29 EAST, NMPM

Section 29: S/2 NW/4 and N/2 SW/4  
Section 30: SW/4, S/2 N/2, and N/2 SE/4

TOWNSHIP 18 SOUTH, RANGE 27 EAST, NMPM

Section 1: All  
Section 2: S/2, NE/4 NE/4, SW/4 NE/4, S/2 NW/4, and NW/4 NW/4  
Section 3: All  
Section 4: SE/4, S/2 NE/4, S/2 SW/4, and NE/4 SW/4  
Section 8: E/2 SE/4 and SE/4 NE/4  
Section 9: All  
Section 10: W/2 and NE/4  
Section 11: NW/4, W/2 NE/4, and NE/4 NE/4  
Section 15: N/2 NW/4 and SW/4 NW/4  
Section 16: N/2, SW/4, N/2 SE/4, and SW/4 SE/4  
Section 17: S/2 NE/4, NE/4 NE/4, SE/4 NW/4, NE/4 SW/4, and N/2 SE/4

TOWNSHIP 18 SOUTH, RANGE 28 EAST, NMPM

Section 4: N/2 NW/4, SW/4 NW/4, and NW/4 NE/4  
Section 5: NE/4 and N/2 NW/4  
Section 6: NW/4, N/2 SW/4, N/2 SE/4, SW/4 SE/4, S/2 NE/4, and NE/4 NE/4

RULE 2. The allowable for the Project shall be the sum of the allowables of the several wells within the project area, including those wells which are shut in, curtailed, or used as injection wells. Allowables for all wells shall be determined in a manner hereinafter prescribed.

RULE 3. That the maximum daily project allowable shall be an amount of oil which will result in reservoir voidage no greater than the average daily reservoir voidage in the project

Case No. 4953  
Order No. R-4549

area for the calendar year 1972 or 30,000 barrels of oil per day, whichever is less, except that after reinjection of approximately 70 percent of the produced gas has been achieved the maximum daily project allowable shall be an amount of oil which will result in reservoir voidage no greater than the average daily reservoir voidage for the project area for the year 1972 or 40,192 barrels of oil per day, whichever is less.

RULE 4. That after gas reinjection has commenced but before the full 70 percent reinjection has been achieved, allowable in addition to the above-described 30,000 barrels per day may be assigned to the project area, provided that said allowable shall be based on gas produced and injected in the project area and shall be computed in accordance with Rule 10 below and the following formula and shall not exceed 10,192 barrels of oil per day:

$$\begin{aligned} \text{Additional Allowable in} \\ \text{Excess of 30,000 BOPD} = 97.07 \left[ 2 \left( \frac{\text{MCF gas inj. previous month} \times 10}{\text{MCF gas prod. previous month}} \right)^2 \right. \\ \left. + \left( \frac{\text{MCF gas inj. previous month} \times 10}{\text{MCF gas prod. previous month}} \right) \right] \end{aligned}$$

RULE 5. That all calculations of reservoir voidage shall be in accordance with the formula set out in Attachment "A" to this order utilizing the Table of Fluid Properties set out in Attachment "B" of this order.

RULE 6. Allowable credit for injection wells may be transferred to producing wells within the project area, as may the allowable credit for producing wells which, in the interest of more efficient operation of the Project, are shut in or curtailed because of high gas-oil ratio or are shut in any of the following reasons: Pressure regulation, control pattern or sweep efficiencies, or to observe changes in pressures or changes in characteristics of reservoir liquids or progress of sweep.

RULE 7. The allowable credit assigned to any well which is shut in or which is curtailed in accordance with the provisions of Rule 6 which allowable credit is to be transferred to any well or wells in the project area for production, shall in no event be greater than its ability to produce during the test prescribed by Rule 9 below or greater than the current top unit allowable for the pool during the month of transfer, whichever is less.

RULE 8. The allowable credit assigned to any injection well on a 40-acre proration unit shall be top unit allowable for the Empire-Abo Pool.

RULE 9. The allowable credit assigned to any well which is shut in or curtailed in accordance with Rule 6, shall be determined by a 24-hour test at a stabilized rate of production, which shall be the final 24-hour period of a 72-hour test throughout which the well should be produced in the same manner and at a constant rate. The daily tolerance limitation set forth in Commission Rule 502 I (a) and the limiting gas-oil ratio (2,000 to 1) for the pool shall be waived during such tests. The project operator shall notify all operators offsetting the well, as well as the Commission, of the exact time such tests are to be conducted. Tests may be witnessed by representatives of the offsetting operators and the Commission, if they so desire.

RULE 10. The allowable credit for residue gas injection shall be calculated in accordance with the appropriate fluid properties current in the reservoir (as determined in accordance with Attachment "B" to this Order) and shall be shown on the Pressure Maintenance Project Operator's Monthly Report.

RULE 11. The basic allowable assigned to each producing well in the Project shall be equal to the well's ability to produce or to top unit allowable for the pool, whichever is less. Wells capable of producing more than top unit allowable may also receive transfer allowable, provided however, that no producing well in the project area which directly or diagonally offsets a well not committed to the unit producing from the same common source of supply shall receive an allowable or produce in excess of two times top unit allowable for the pool.

RULE 12. Each month the project operator shall submit to the Commission a Pressure Maintenance Project Operator's Report, on a form prescribed by the Commission, outlining thereon the data required, and requesting allowables for each of the several wells in the Project as well as the total project allowable. The aforesaid Pressure Maintenance Project Operator's Report shall be filed in lieu of Form C-120 for the Project.

RULE 13. The Commission shall, upon review of the report and after any adjustments deemed necessary, calculate the allowable for each well in the Project for the next succeeding month in accordance with these rules. The sum of the allowables so calculated shall be assigned to the Project and may be produced from the wells in the Project in any proportion except that no well in the Project which directly or diagonally offsets a well not committed to the unit producing from the same common source of supply shall produce in excess of two times top unit allowable for the pool.

RULE 14. The Secretary-Director of the Commission is hereby authorized to approve such additional producing wells and injection wells at orthodox and unorthodox locations within the boundaries of the ARCO Empire-Abo Unit Area as may be necessary to complete an efficient production and injection pattern, provided

-8-

Case No. 4953

Order No. R-4549

said wells are drilled no closer than 660 feet to the outer boundary of said unit nor closer than 10 feet to any quarter-quarter section or subdivision inner boundary and provided that no well shall be approved for gas injection when such well is located closer than 1650 feet to a tract which is not committed to the unit and on which is located a well producing from the same common source of supply. To obtain such approval, the project operator shall file proper application with the Commission, which application, if it seeks authorization to convert additional wells to injection or to drill additional production or injection wells shall include the following:

(1) A plat identifying the lands committed to the unit agreement and those lands not committed to said agreement, and showing the location of the proposed well, all wells within the unit area, and offset operators.

(2) A schematic drawing of the proposed well which fully describes the casing, tubing, perforated interval, and depth.

(3) A letter stating that all offset operators to the proposed well have been furnished a complete copy of the application and the date of notification.

The Secretary-Director may approve the proposed well if, within 20 days after receiving the application, no objection to the proposal is received. The Secretary-Director may grant immediate approval, provided waivers of objection are received from all offset operators.

RULE 15. Expansion or contractions of the project area may be approved by the Secretary-Director of the Commission administratively when good cause is shown therefor.

(4) That jurisdiction of this cause is retained for the entry of such further orders as the Commission may deem necessary.

DONE at Santa Fe, New Mexico, on the day and year hereinabove designated.

EMPIRE AEC UNIT

Reservoir Voidage Formula:

$$\text{Equation 1: } V_{rvb} = Q_o \left[ B_o + (R_{pn} - R_s) B_g \right] + (Q_{wp} - Q_{we}) B_w$$

Where:

- $V_{rvb}$  = Reservoir voidage, bbls. per day
- $Q_o$  = Oil production rate, Stock tank bbls. per day
- $B_o$  = Oil formation volume factor (1), reservoir  
.volumetric bbls/stock tank bbl.
- $R_{pn}$  = Net producing gas-oil ratio, MCF/S.T.B.O.

$$R_{pn} = R_p \left( 1.0 - \frac{G_i}{G_p} \right)$$

- Where:  $R_p$  = producing gas-oil ratio, MCF/BO  
 $G_i$  = daily volume of gas injected, MCF/Day  
 $G_p$  = daily volume of gas produced, MCF/Day

- $R_s$  = Solution gas-oil ratio(2), MCF/STBO
- $B_g$  = Gas formation volume factor(3), RVB/MCF
- $Q_{wp}$  = Water production rate, S.T.B.W./Day
- $Q_{we}$  = Aquifer water influx rate, S.T.B.W./Day, determined  
from reservoir numeric model runs to be 1950 BWPD
- $B_w$  = Water formation volume factor, RVBW/STBW, use 1.0

(1), (2), (3): These values calculated from Table of Fluid Properties,  
Attachment "B".

BEFORE THE OIL CONSERVATION COMMISSION

STATE OF NEW MEXICO

APPLICATION OF ATLANTIC RICHFIELD  
COMPANY FOR APPROVAL OF A PRESSURE  
MAINTENANCE PROJECT FOR THE EMPIRE ABO  
POOL TO BE EMBRACED WITHIN THE EMPIRE  
ABO UNIT AREA CONSISTING OF 11,339.15  
ACRES IN TOWNSHIPS 17 AND 18 SOUTH,  
RANGES 27, 28 AND 29 EAST, EDDY COUNTY,  
NEW MEXICO, INCLUDING EIGHT GAS INJEC-  
TION WELLS AND FOR APPROVAL OF SPECIAL  
POOL RULES INCLUDING A PROJECT ALLOWABLE

---

Oil Conservation Commission  
Box 2088  
Santa Fe, New Mexico 87501

Comes Atlantic Richfield Company, acting by and through the undersigned attorneys, and hereby makes application for approval of a pressure maintenance project for the Empire Abo Pool to be embraced within the Empire Abo Unit Area consisting of 11,339.15 acres in Townships 17 and 18 South, Ranges 27, 28 and 29 East, Eddy County, New Mexico, including eight injection wells and for the approval of special pool rules including a project allowable, and in support thereof respectfully shows:

1. That there is filed herewith a plat showing the location of the proposed injection wells and the location of all other wells within a radius of 2 miles from the proposed injection wells and the formation from which said wells are producing or have produced. The plat also shows the boundaries of the proposed unit area and shows the owners of the oil and gas leases within an area of 2 miles of the proposed unit area.

2. As indicated by Exhibit "A" filed herewith, there are 8 proposed injection wells. All of the injection wells consist of presently producing wells to be converted to injection wells. All of said wells will be completed in such a way as to provide for the injection of gas into the gas zone of the Empire Abo Pool which includes the Abo formation. There are filed herewith logs of all the wells. There are also filed herewith diagrammatic sketches of all the proposed injection wells, showing all casing strings, including diameters and

setting depths, quantities used and tops of cement, perforated or open hole intervals, tubing strings, including diameters and setting depths, and types and location of packers to be used.

3. The proposed pressure maintenance project is within the boundaries of the proposed Unit Agreement for the Empire Abo Unit Area and application has been filed for approval of the unit agreement by the Commission.

4. It is proposed to inject gas for increased recovery purposes into the Empire Abo Pool which includes the Abo formation only. The unit agreement identifies the top of the formation at 5325 feet on the Welex Radioactivity Log dated December 21, 1958 for the Amoco Production Company's State of New Mexico "AU" Well No. 1 located 1980 feet from the south line and 1830 feet from the west line of Section 2, Township 18 South, Range 27 East and the bottom of the formation at 6533 feet on the log.

5. That applicant proposes to inject Abo residue gas from the Amoco Empire Gasoline Plant and the Phillips Artesia Gasoline Plant and that it is anticipated that approximately 37,000 MCF per day will be injected after all wells which are to be converted to injection wells have been converted. Maximum wellhead injection pressure is to be approximately 2,000 psig.

6. That applicant also desires a project allowable to be approved, in accordance with Rule 701 of the Commission rules.

7. Applicant also submits an Initial Plan of Operation as provided by Paragraph 11 of the Unit Agreement, said Plan of Operation to include details of special field rules requested.

8. That the special pool rules to be adopted include a project allowable as well as provision for the administrative approval of the conversion of additional wells for injection purposes.

9. In the opinion of applicant, said pressure maintenance project will be in the interest of conservation, prevention of waste, the protection of correlative rights and will tend to promote the greatest ultimate recovery of oil and gas from that portion of the Empire Abo Pool covered by the project.

10. Applicant requests that this matter be set down for hearing at the examiner's hearing to be held on April 25, 1973.

Respectfully submitted,

ATLANTIC RICHFIELD COMPANY

at 30,000 max

$$\eta = 97.07 \left[ 2 \left( \frac{37000 \times 10}{52837} \right)^2 + \left( \frac{37000 \times 10}{52837} \right) \right]$$

$$= 97.07 \left[ 2 \left( \frac{370000}{52837} \right)^2 + \left( \frac{370000}{52837} \right) \right]$$

$$= 97.07 [2(7)^2 + 7]$$

$$= 97.07 [2(49) + 7]$$

$$= 97.07 (98 + 7) = 97.07 \times 105$$

increase over 30,000 max allow =  $\left[ 2 \left( \frac{MCF_{gas\ inj} \times 10}{MCF_{gas\ prod}} \right)^2 + \left( \frac{MCF_{gas\ inj} \times 10}{MCF_{gas\ prod}} \right) \right]$

$$\eta = 97.07 \left[ 2 \left( \frac{5000 \times 10}{35000} \right)^2 + \frac{5000 \times 10}{35000} \right]$$

$$= 97.07 [2(1.43)^2 + 1.43]$$

$$= 97.07 [2(2.04) + 1.43] = 4.08 + 1.43 = 5.51$$

$$= 97.07 \times 5.51 = 535$$

current 60R  
before 1300 & 1400  
say 1400

current oil prod  
about 25000 BOPD

current gas  
25000

10000000  
25000  
35000000

say they start  
injecting 5,000,000
