RE: 2021 Annual Monitored Natural Attenuation Report
Western Refining Southwest LLC, D/B/A Marathon Gallup Refinery
EPA ID# NMD000333211

Dear Mr. Pierard,

Please find enclosed the 2021 Annual Monitored Natural Attenuation Report for the Western Refining Southwest LLC, D/B/A Marathon Gallup Refinery. If you have any questions or comments regarding the information contained herein, please do not hesitate to contact John Moore at (505) 879-7643.

Certification

I certify under penalty of law that this document and all attachments were prepared under my direction of supervision according to a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Sincerely,
Western Refining Southwest LLC, D/B/A Marathon Gallup Refinery

Ruth A Cade

2021 ANNUAL MONITORED NATURAL ATTENUATION REPORT

WESTERN REFINING SOUTHWEST LLC

D/B/A MARATHON GALLUP REFINERY

MARCH 31, 2022

Executive Summary

This report presents the results of a monitored natural attenuation (MNA) evaluation of chlorinated volatile organic compounds (CVOCs) and methyl tert-butyl ether (MTBE) in the Hydrocarbon Seep Area of the Western Refining Southwest LLC (dba Marathon Gallup Refinery [Refinery]) in Gallup, New Mexico (see Section 1.0, Figure 1-1). The Hydrocarbon Seep Area is located in the western portion of the Refinery to the west-southwest of the tank farm (see Section 1.0, Figure 1-2). Historically, the Hydrocarbon Seep Area has been impacted by releases of separate phase hydrocarbon (SPH) associated with refinery operation. In February 2018, the New Mexico Environment Department (NMED) requested in the "Disapproval, Interim Measures Report Hydrocarbon Seep Area, Western Refining Southwest Inc., Gallup Refinery, EPA ID# NMD000333211, HWB-WRG-15-002" that the Hydrocarbon Seep Area will be monitored for natural attenuation.

Sixteen wells are included as part of the MNA program. These monitoring wells are located in the Hydrocarbon Seep Area or in a hydraulically upgradient area. CVOCs detected in groundwater as part of routine quarterly monitoring in this area include tetrachloroethene, trichloroethene (TCE), 1,1-dichloroethene (1,1-DCE), 1,1-dichloroethane (1,1-DCA), 1,2 dichloroethane (1,2-DCA), and vinyl chloride. Non-chlorinated volatile organic compounds (VOCs) detected above the New Mexico Environment Department (NMED) Groundwater Cleanup Level standards include benzene, toluene, ethylbenzene, total xylenes, and MTBE.

The MNA analysis used for this assessment follows the U.S. Environmental Protection Agency (USEPA) procedures for MNA evaluation of CVOCs (USEPA 1998), which includes:

- An evaluation of MNA by-products and pre-cursors to infer the presence of natural biodegradation over the period of 2018 to 2021 in 14 monitoring wells.
- A statistical evaluation of contaminant concentration trends over the period of 2014 to 2021 in eight wells.

Using USEPA's scoring system for assessing the strength of evidence for inferring natural attenuation of CVOCs, the scores for 14 wells with detectable concentrations of CVOCs ranged from 7 to 15. Based on USEPA's criteria and these scores, the evidence for natural attenuation was "Limited" in 13 wells and was "Adequate" in one well. There were no wells in which the evidence was deemed "Inadequate". Two wells (MKTF-20 and MKTF-21) were not evaluated due to no detectable CVOCs from 2018 to 2021.

The results of the MNA statistical analysis of CVOC analytical data from eight wells conducted using Mann-Kendall (MK) trend analysis over the period of 2014 to 2021 indicate evidence of decreasing monotonic trends since 2014 (95% confidence) for 1,1-DCA, 1,1-DCE, cis-1,2-DCE, and TCE in wells MKTF-02, MKTF-09, MKTF-24, and MKTF-25. Monotonic increasing trends were evident since 2014 (95% confidence) for 1,1-DCE in wells MKTF-10 and MKTF-22 and vinyl chloride in wells MKTF-02,

MKTF-10, MKTF-16, MKTF-24, and MKTF-25. Other well/analyte pairs did not show a statistically significant trend.

For MTBE, the MK trend analysis for 11 wells found evidence of decreasing monotonic trends since 2014 (95% confidence) in wells MKTF-09, MKTF-16, MKTF-21, and MKTF-24. The trend analysis showed evidence of monotonic increasing trend since 2014 (95% confidence) for MTBE in well MKTF-25. Other wells did not show a statistically significant trend. CVOC and MTBE trend analyses are presented in Tables 4-1 and 4-2, included in Section 4.0 of this report.

1.0 Introduction

This report presents the results of a monitored natural attenuation (MNA) evaluation of chlorinated volatile organic compounds (CVOCs) and methyl tert-butyl ether (MTBE) in the Hydrocarbon Seep Area of the Western Refining Southwest LLC (dba Marathon Gallup Refinery [Refinery]) in Gallup, New Mexico (NM) (Figure 1-1). This evaluation was conducted in general accordance with the "Response to Approval with Modifications, Natural Attenuation Assessment and Proposed Workplan for the Hydrocarbon Seep Area" (proposed Work Plan) (Western 2021). Because the proposed Work Plan was not approved in 2021, some elements were not implemented (see Section 3.3).

The Hydrocarbon Seep Area is located in the western portion of the Refinery to the west-southwest of the refinery tank farm (Figure 1-2). Historically, the Hydrocarbon Seep Area has been impacted by releases of separate phase hydrocarbon (SPH) associated with refinery operation. Hydrocarbon seeps were discovered in 2013. In February 2018, the New Mexico Environment Department (NMED) requested in the "Disapproval, Interim Measures Report Hydrocarbon Seep Area, Western Refining Southwest Inc., Gallup Refinery, EPA ID# NMD000333211, HWB-WRG-15-002" that the Hydrocarbon Seep Area will be monitored for natural attenuation.

Built in the 1950s, the Refinery is located within a rural and sparsely populated area east of Gallup, NM. The nearest population centers are the Pilot Flying J Travel Center refueling plaza, the Interstate 40 (I-40) corridor, and a small cluster of residential homes located on the south side of I-40 approximately 2 miles southwest of the Refinery (Jamestown, NM).

The Refinery was indefinitely idled on October 9, 2020. During operation, the Refinery was a crude oil refining and petroleum products manufacturing facility. There were no organic chemicals, plastics, or synthetic fibers manufactured that contributed to the process flow of wastewater. The Refinery did not manufacturer lubricating oils. As a result of the processing steps, the Refinery produced a wide range of petroleum products including propane, butane, unleaded gasoline, diesel, residual fuel, and commercial products of fertilizer and solid elemental sulfur.

Historically, the Refinery primarily received crude oil via two 6-inch diameter pipelines, which entered the Refinery property from the north (Four Corners Area). In addition, the Refinery also received natural gasoline feedstock via a 4-inch diameter pipeline that came in from the west along the I-40 corridor from the Western Refining Southwest LLC – Wingate Plant, which is also indefinitely idled. Crude oil and other products also arrived at the Refinery via railroad cars. These feed stocks were then stored in tanks until refined into products.

Released to Imaging: 11/23/2022 10:23:25 AM

2.0 Site Conditions

The Refinery is located within a rural and sparsely populated section of McKinley County, NM. It is situated in the high desert plain on the western flank of the Continental Divide approximately 17 miles east of Gallup, NM. The surrounding land is comprised primarily of public and private lands used for cattle and sheep grazing.

2.1 Site Topography

Local topography consists of a gradually inclined land surface from high ground in the southeast to a lowland fluvial plain in the northwest. The highest point on Refinery property is located at the southeast corner boundary (elevation approximately 7,040 feet [ft]) and the lowest point is located at the northwest corner boundary (elevation approximately 6,860 ft). Surface soils within most of the area of investigation are primarily Rehobeth silty clay loam. The Refinery is located on a flat man-made terrace.

2.2 Surface Water

Surface water in the Refinery consists of the man-made evaporation ponds and aeration basins. There are several storm water conveyance ditches located throughout the Refinery. These ditches are discharged into basins where storm water is collected and allowed to evaporate or discharged into two designated outfalls.

2.3 Geology

Site boring logs indicate that subsurface fluvial and alluvial soils are primarily comprised of clays and silts with discontinuous inter-bedded sand layers. Very low permeability bedrock (e.g., claystones and siltstones) underlie the surface soils. The Chinle Group, from the Upper Triassic period, crops out over a large area south of the Refinery. The uppermost subunit within the Chinle Group is the Petrified Forest Formation, which is also sometimes referred to as the Petrified Forest Member. Inter-bedded within the Chinle Group is the Sonsela Sandstone bed, which lies within and parallels the dip of the Chinle Group. Its high point is located southeast of the Refinery and slopes downward to the northwest as it passes under the Refinery. Due to the hydraulic confinement of the Petrified Forest Formation aquitard, the Sonsela Sandstone bed acts as a water-bearing reservoir and is artesian at its lower extremis. Artesian conditions exist through much of the central and western portions of the Refinery.

2.4 Hydrogeology

Groundwater flow within the shallow alluvium and the upper Chinle Formation is highly variable due to the presence of complex and irregular stratigraphy including sand stringers, cobble beds, and dense clay layers. According to previous reports, hydraulic conductivity ranges from 30 ft per day (ft/d) for gravel-like sands immediately overlying the Petrified Forest Formation to 3 x 10^{-5} ft/d in the clay soils located near the surface (Western 2020). Groundwater flow within the Lower Chinle Formation is extremely slow and typically averages less than 2.83 x 10^{-7} ft/d (i.e., less than 0.01 ft per year).

Water level data are collected routinely at the Refinery. Wells at the Refinery have been categorized based on the hydrogeologic unit in which they are screened, including the Alluvial/Fluvial Upper Sand Aquifer, the Chinle/Alluvium Aquifer, and the Sonsela Aquifer. The Alluvial/Fluvial Upper Sand Aquifer has a limited aerial extent, existing only on the western margin on the Refinery. Groundwater occurrence in this aquifer is seasonal and limited.

The majority of the wells monitored lie within the shallow weathered sediments that comprise the Chinle/Alluvium Aquifer. Within the Chinle/Alluvium Aquifer, shallow groundwater located under the Refinery property generally flows along the upper contact of the Chinle Formation. The prevailing flow is from the southeast to the northwest, although localized areas may have varying flow directions based on the subsurface geology. The 16 wells in the MNA program are completed in this aquifer.

Groundwater within the Sonsela Aquifer flows southeast to northwest. Hydraulic heads measured within the Sonsela Aquifer are generally lower than those observed within the shallow aquifer near the topographic high on which the Refinery process area and tank farm are situated, and higher than those observed within the shallow aquifer in topographically low areas to the west and northwest, near the evaporation ponds. The higher head in the Sonsela Aquifer in low areas is due to confining pressure from lower permeability Chinle Formation bedrock between the shallow Chinle/Alluvium Aquifer and the Sonsela Aquifer bed at depth, which makes the Sonsela Aquifer artesian.

Released to Imaging: 11/23/2022 10:23:25 AM

Received by OCD: 3/25/2022 3:35:30 PM

3.0 MNA Monitoring Program

Per the proposed Work Plan (Western 2021), 13 wells were selected for the MNA program. The wells consist of Marketing Tank Farm (MKTF) designated wells located within and hydraulically upgradient of the Hydrocarbon Seep Area. These wells contain CVOCs above the NMED Groundwater Cleanup Levels (New Mexico Administrative Code 20.6.2.3103) and MTBE above the NMED Tap Water Standards (Risk Assessment Guidance, Table A-1, Tap Water, March 2017). In addition, the selected wells did not contain detectable SPH in 2020.

The MNA wells originally included: MKTF-02, MKTF-04, MKTF-09, MKTF-10, MKTF-13, MKTF-16, MKTF-17, MKTF-19, MKTF-20, MKTF-21, MKTF-22, MKTF-24, and MKTF-25. In 2021, wells MKTF-02R, MKTF-04R, and MKTF-17R replaced wells MKTF-02, MKTF-04 and MKTF-17, respectively. Data from MKTF-02, MKTF-04, and MKTF-17 are included in the 2021 evaluation alongside the new replacement well data. Figure 3-1 presents the 16 MNA wells that were evaluated.

CVOCs detected in groundwater as part of routine quarterly monitoring in the Hydrocarbon Seep Area between 2014 and 2021, include: tetrachloroethene (PCE), trichloroethene (TCE), 1,1-dichloroethene (1,1-DCE), 1,1-dichloroethane (1,1-DCA), 1,2-dichloroethane (1,2-DCA), and vinyl chloride. Hydrocarbon VOCs detected above the NMED Groundwater Cleanup Level standards include benzene, toluene, ethylbenzene, total xylenes (BTEX), and MTBE. Monitoring wells with consistent detections of CVOCs and MTBE are shown in Figure 3-1. Monitoring wells with consistent detection of vinyl chloride are shown in Figure 3-2.

The following analyte list was proposed for the MNA program:

- BTEX, MTBE, tertiary butyl alcohol (TBA), PCE, TCE, cis-1,2-DCE, 1,1-DCE, 1,1-DCA, 1,2-DCA, and vinyl chloride
- Dissolved/total iron and manganese, nitrate/nitrite, and sulfate/sulfide to determine their availability as terminal electron receptors and the redox state
- Chloride as the end point of 1,1-DCA and 1,2-DCA degradation
- Field parameters such as pH, temperature, oxidation reduction potential (ORP), and dissolved oxygen (DO)

In addition, ethene, ethane, and methane analysis will be conducted in four monitoring wells with elevated vinyl chloride concentrations (MKTF-2, MKTF-10, MKTF-24, and MKTF-25)

3.1 MNA Sampling Results

Table 3-1 presents the most recent groundwater analytical data (2018 to 2021) from the Hydrocarbon Seep Area wells, including organic and inorganic analytes, DO, temperature, and ORP. DO and ORP measurements were conducted using bailed water from a well, which was then placed in a container for subsequent DO and ORP measurements using a calibrated field instrument equipped with a silver/silver chloride reference electrode. This method potentially introduces oxygen from exposure to air in the open container, which could potentially increase DO and ORP measurements.

Released to Imaging: 11/23/2022 10:23:25 AM

These data are used to evaluate the potential for MNA in procedures developed by the U.S. Environmental Protection Agency (USEPA) (USEPA 1998) and the American Petroleum Institute (API 2007). Laboratory data are provided in Appendix A. Data validation reports are presented in Appendix B.

3.2 MNA Criteria and Scoring

From a more quantitative standpoint, an evaluation was conducted on a well-by-well basis in accordance with USEPA guidance (USEPA 1998). Table 3-2 presents the scoring criteria from the USEPA and the applicability of the criteria to the Hydrocarbon Seep Area, given the analytical requirements of the proposed Work Plan (Western 2021) and current field sampling practices. Table 3-2 shows the implementation of the scoring for each well, and presents the final evaluation score for each well, which summarizes the potential for CVOC natural attenuation (reductive dichlorination). Four categories of scores assess the potential for anaerobic biodegradation of CVOCs, as follows:

- > 20 Strong evidence
- 15 to 20 Adequate evidence
- 6 to 14 Limited evidence
- 0 to 5 Inadequate evidence.

As shown in Table 3-3, the evidentiary scores for the 14 wells scored in the analysis ranged from 7 to 15, with 13 wells deemed “Limited” category and one well deemed “Adequate” using USEPA’s nomenclature for the scoring ranges. Two wells (MKTF-20 and MKTF-21) were not evaluated due to no detectable CVOCs from 2018 to 2021. In addition, MKTF-20 and MKTF-21 have never had detectable CVOCs.

3.3 Deviations from the Proposed Work Plan

Deviations to the proposed Work Plan occurred during 2021. Completion of these elements is expected in 2022. The following work was not completed in 2021:

- MKTF-16, MKTF-21, and MKTF-24 were purged dry. For this reason, dissolved iron and dissolved manganese were not sampled in MKTF-16 and MKTF-21 during the first quarter. Total iron and total manganese were not sampled in MKTF-16 during the first quarter. Nitrate/nitrite analysis was not conducted in the first quarter and third quarter in MKTF-16 and fourth quarter in MKTF-24. Sulfate/sulfide analysis was not conducted in MKTF-16 during the first quarter. Chloride analysis was not conducted in MKTF-16 during the first quarter.
- MKTF-09, MKTF-13, MKTF-19, MKTF-20, and MKTF-22 were not sampled in 2021 due to SPH.
- The proposed Work Plan did not receive approval during the 2021 sampling period. For this reason, TBA analysis was not conducted in any wells. Ethene, ethane, and methane analysis were not conducted in MKTF-02, MKTF-02R, MKTF-10, MKTF-24, and MKTF-25.

4.0 Statistical Analysis

The following describes the methods used and results obtained during the 2021 statistical evaluation of the data from Marathon Petroleum Company, Gallup Refinery. Data collected are used to determine if the analytical data results from the current monitoring period represent statistical upward or downward trends in analyte concentrations in the groundwater samples collected from MKTF-designated wells. Data trend graphs covering the period 2014 to 2021 for CVOCs and MTBE are shown in Appendix C and Appendix D, respectively.

4.1 Statistical Methods

4.1.1 Quality Assurance/Quality Control and Data Handling

Trace concentrations (estimated results between the reporting limit and the method detection limit [MDL]) reported since June 8, 2016, were treated as true detected values. Therefore, being the upper bound of non-detect (ND) results, the MDL was used as a substitute value for ND values in all statistical evaluations, unless stated otherwise (see Mann-Kendall (MK) trend analysis section). R® (R Core Team, 2020), a programing language and software environment for statistical analysis, was used for all statistical needs.

The statistical evaluation was performed for six chlorinated volatile organic compounds (CVOCs; 1,1-DCA, 1,1-DCE, 1,2-DCA, cis-1,2-DCE, TCE, and vinyl chloride) and MTBE. All constituents were reported in milligrams per liter. Eight wells for CVOCs (i.e., MKTF-02, MKTF-02R, MKTF-09, MKTF-10, MKTF-16, MKTF-22, MKTF-24, MKTF-25) and 13 wells for MTBE (i.e. MKTF-04, MKTF-04R, MKTF-09, MKTF-16, MKTF-17, MKTF-17R, MKTF-19, MKTF-20, MKTF-21, MKTF-22, MKTF-23, MKTF-24, MKTF-25) were part of the 2021 evaluation. Wells MKTF-02R, MKTF-04R, and MKTF-17R are replacement wells for MKTF-02, MKTF-04, and MKTF-17, respectively, and were installed in 2021.

4.1.2 Exploratory Data Analysis and General Statistics

Exploratory Data Analysis was performed on all well-analyte combinations and are presented in Table 4-1 and Table 4-2, for the CVOCs and MTBE respectively. For each analyte-location pair, these statistics include the number of samples collected since April 8, 2014, the overall detection rate, the minimum and maximum detected concentrations, the minimum and maximum MDLs reported by laboratories, the overall sample mean, median, and sample standard deviation, and the dates of the range of the first and last sample.

4.1.3 Time Series Plots and Outlier Analysis

Outlier analysis was performed at a 95 percent (%) confidence level using the Dixon's and Grubbs' tests when the sample size for each analyte-location pair, n, was more than 4 but less than 30, with at least one detected result. If the sample size was greater than 25, then the Rosner's test was used instead of or in addition to the two tests mentioned above and up to 3 potential outliers were considered. Because outlier tests' assumptions are often difficult to attain with real data, and the presence of one

Released to Imaging: 11/23/2022 10:23:25 AM

outlier can mask the detection of another, any extreme and unusual values flagged as outliers by any of the outlier tests (e.g., concentration 3 times greater or 1/3 smaller than the overall concentration, excluding the most recent result) were graphically confirmed using time series plots. The last results were never considered an outlier because there is not sufficient evidence that it is a one-time elevated concentration. Results from the outlier analysis are also presented in Table 4-1 (CVOCs) and Table 4-2 (MTBE).

For each analyte-location pair, time series plots were constructed to show any potential trend in CVOCs and MTBE. In addition, any graphically confirmed outliers were also shown on the time series plots (Appendices B [CVOCs] and C [MTBE]).

4.1.4 Nonparametric Trend Analysis

Non-parametric trend analysis was conducted for all analyte-location pairs with a sample size equal to or greater than 8 (not including graphically confirmed outliers) and one detected result above the MDL to assess the temporal stationarity of the constituents' concentrations through time. To avoid trends in the MDLs driving the trend analysis results, the USEPA (2009) recommends ND values be assigned "a common value lower than any of the detected measurements" (EPA 2009, Section 17.3.2 p. 17-31). ND values were assigned half of the minimum MDLs in each location for all analyses related to the trend analysis. Trend analyses were performed using the nonparametric approach, MK's monotonic trend analysis. Traditional MK trend analysis relies on several assumptions such as no serial correlation, no outliers, and no seasonality. The presence of serial correlation was tested for at each location using the rank von Neumann ratio test at 95% confidence level and the results were graphically confirmed using Autocorrelation Function and Partial Autocorrelation Function. The presence of outliers in the data was addressed during the outlier analysis described above. Seasonal effects between the Summer-Fall (May to October) and Winter-Spring (November to April) sampling events were tested using Wilcoxon-Mann-Whitney tests at a 90% confidence level. The assumption of homogeneity of variance between the two seasons for the Wilcoxon tests for each constituent of concern well combination was performed using the traditional Levene's test. In the absence of both serial autocorrelation and seasonal effect, the traditional MK trend analysis test was used. When serial correlation was identified, a modified MK test for serially correlated data using the Yue and Wang (Yue, 2004) variance correction approach was used. When seasonality was present in the data, a standard seasonal MK test, which performs a nonparametric test for a monotonic trend within each season based on Kendall's tau statistic, was used. Finally, if the presence of both serial correlation and seasonality in the data was confirmed the seasonal MK approach was adapted to handle serial correlation. Results from all trend analyses for the CVOCs are presented in Table 4-1 and for MTBE in Table 4-2.

Released to Imaging: 11/23/2022 10:23:25 AM

4.2 Results

4.2.1 CVOCs

Nonparametric monotonic increasing trends were identified since 2014 for the following analyte-well pairs with 95% confidence (Table 4-1):

- 1,1-DCE in wells MKTF-10 and MKTF-22
- Vinyl Chloride in wells MKTF-02, MKTF-10, MKTF-16, MKTF-24, and MKTF-25

In addition, evidence of decreasing monotonic trends since 2014 was found, with 95% confidence, for 1,1-DCA, 1,1-DCE, cis-1,2-DCE, and TCE in wells MKTF-02, MKTF-09, MKTF-24, and MKTF-25.

All other analyte-well pairs meeting the sample size and detection requirements showed no evidence of an overall trend since 2014 at a 95% confidence level.

4.2.2 MTBE

The MK trend analysis test found evidence of a monotonic increasing trend since 2014 for MTBE in well MKTF-25 with 95% confidence (Table 4-2).

In addition, evidence of decreasing monotonic trends since 2014 was found, with 95% confidence, for MTBE in wells MKTF-09, MKTF-16, MKTF-21, and MKTF-24.

All other analyte-well pairs meeting the sample size and detection requirements showed no evidence of an overall trend since 2014 at a 95% confidence level.

5.0 Conclusions

The MNA assessment used USEPA procedures for MNA evaluation (US EPA 1998), which included an evaluation of MNA by-products and pre-cursors to infer the presence of natural biodegradation over the period of 2018 to 2021 and a statistical evaluation of contaminant concentration trends over the period of 2014 to 2021. The date range for MNA was selected to represent current conditions for the analysis of the key MNA parameters. Statistical analysis, however, was conducted using data from the period 2014 through 2021 to evaluate long-term conditions. The report used monitoring well analytical data in the Hydrocarbon Seep Area and in hydraulically upgradient areas.

Using USEPA's scoring system for assessing the strength of evidence for inferring natural attenuation of CVOCs, the scores for the 14 wells included in the analysis ranged from 7 to 15. Based on USEPA's criteria and these scores, the evidence for natural attenuation was "Limited" in 13 wells and was "Adequate" in one well. There were no wells in which the evidence was deemed "Inadequate". The time period of the analysis was 2018 to 2021 to best represent current geochemical conditions.

The results of the MNA statistical analysis of CVOC analytical data from eight wells conducted using MK trend analysis over the period of 2014 to 2021 indicate evidence of decreasing monotonic trends since 2014 (95% confidence) for 1,1-DCA, 1,1-DCE, cis-1,2-DCE, and TCE in wells MKTF-02, MKTF-09, MKTF-24, and MKTF-25. Monotonic increasing trends were evident since 2014 (95% confidence) for 1,1-DCE in wells MKTF-10 and MKTF-22 and vinyl chloride in wells MKTF-02, MKTF-10, MKTF-16, MKTF-24, and MKTF-25. Other well/analyte pairs did not show a statistically significant trend.

For MTBE, the MK trend analysis for 11 wells found evidence of decreasing monotonic trends since 2014 (95% confidence) in wells MKTF-09, MKTF-16, MKTF-21, and MKTF-24. The trend analysis showed evidence of monotonic increasing trend since 2014 (95% confidence) for MTBE in well MKTF-25. Other wells did not show a statistically significant trend.

Because the proposed Work Plan was not approved in 2021, deviations occurred given the date of receipt of NMED's approval with modification (September 28, 2021) and previously scheduled 2021 monitoring wells sampling. As a results, several analytes were not sampled in 2021, including degradation products TBA and dissolved gases ethane and ethene. These and other analyses not performed in 2021 will be completed in 2022. Based on the initial evaluation, we recommend continuing the MNA monitoring program.

Notes:
-- = not sampled/measured
< = less than
BTEX = benzene, toluene, ethylbenzene, xylene
C = centigrade
DCA = dichloroethane
DCE = dichloroethene
DO = dissolved oxygen
Fe = iron
ID = identification
mg/L = milligrams per liter
Mn = manganese
MNA = monitored natural attenuation
MTBE = methyl tert-butyl ether
mV = millivolts
ORP = oxidation reduction potential measured using a silver/silver chloride reference cell
PCE = tetrachloroethene
T = temperature
TCE = trichloroethene
TPH-DRO = total petroleum hydrocarbons - diesel range organics
TPH-GRO = total petroleum hydrocarbons - gasoline range organics

pH, ORP, and temperature were measured during well purging prior to the sampling date

Released to Imaging: 11/23/2022 10:23:25 AM

Notes:
-- = not sampled/measured
< = less than
BTEX = benzene, toluene, ethylbenzene, xylene
C = centigrade
DCA = dichloroethane
DCE = dichloroethene
DO = dissolved oxygen
Fe = iron
ID = identification
mg/L = milligrams per liter
Mn = manganese
MNA = monitored natural attenuation
MTBE = methyl tert-butyl ether
mV = millivolts
ORP = oxidation reduction potential measured using a silver/silver chloride reference cell
PCE = tetrachloroethene
T = temperature
TCE = trichloroethene
TPH-DRO = total petroleum hydrocarbons - diesel range organics
TPH-GRO = total petroleum hydrocarbons - gasoline range organics

pH, ORP, and temperature were measured during well purging prior to the sampling date

TABLE 3-2. MONITORED NATURAL ATTENUATION ASSESSMENT USEPA SCORING SYSTEM
WESTERN REFINING SOUTHWEST LLC, D/B/A MARATHON GALLUP REFINERY, GALLUP, NEW MEXICO

Analysis	Concentration in Most Contaminated Zone	Significance	Applicability to the Existing Data Set	Scoring Value
Oxygen	<0.5 mg/L	Tolerated, suppresses the reductive pathway at higher concentrations	DO data collected in a bucket during well purging. Not as accurate as a flow-through cell	3
Oxygen	>5 mg/L	Not tolerated; however, VC may be oxidized aerobically	DO data collected in a bucket during well purging. Not as accurate as a flow-through cell	-3
Nitrate	<1 mg/L	At higher concentrations may compete with reductive pathway	In data set	2
Iron II	>1 mg/L	Reductive pathway possible; VC may be oxidized under Fe(III)-reducing conditions	Ferrous iron not sampled for; dissolved (field filtered) is used	3
Sulfate	<20 mg/L	At higher concentrations may compete with reductive pathway	In data set	2
Sulfide	>1 mg/L	Reductive pathway possible	Not currently analyzed	3
Methane	<0.5 mg/L	VC oxidizes	Not currently analyzed	0
	>0.5 mg/L	Ultimate reductive daughter product, VC accumulates	Not currently analyzed	3
ORP	<50 mV	Reductive pathway possible	ORP data collected in a bucket during well purging. Not as accurate as a flow-through cell	1
	<-100mV	Reductive pathway likely	ORP data collected in a bucket during well purging. Not as accurate as a flow-through cell	2
pH	5 < pH < 9	Optimal range for reductive pathway	In data set	0
	5 > pH >9	Outside optimal range for reductive pathway	In data set	-2
TOC	> 20 mg/L	Carbon and energy source; drives dechlorination; can be natural or anthropogenic	Not currently analyzed; inferred from total BTEX and TPH	2
Temperature	> 20 C	At T >20 C biochemical process is accelerated	In data set	1
CO_2	>2x background	Ultimate oxidative daughter product	Not currently analyzed	1
Alkalinity	>2x background	Results from interaction between CO_2 and aquifer minerals	Not currently analyzed	1
Chloride	>2x background	Daughter product of organic chlorine	In data set, but very high background in shallow water at the refinery due to other releases	2
Hydrogen	>1 nM/L	Reductive pathway possible, VC may accumulate	Not currently analyzed	3
	<1 nM/L	VC oxidized	Not currently analyzed	0
Volatile Fatty Acids	> 0.1 mg/L	Intermediates resulting from biodegradation of more complex compounds; carbon and energy source	Not currently analyzed	2
BTEX	> 0.1 mg/L	Carbon and energy source; drives dechlorination	In data set	2

TABLE 3-2. MONITORED NATURAL ATTENUATION ASSESSMENT USEPA SCORING SYSTEM
WESTERN REFINING SOUTHWEST LLC, D/B/A MARATHON GALLUP REFINERY, GALLUP, NEW MEXICO

Analysis	Concentration in Most Contaminated Zone	Significance	Applicability to the Existing Data Set	Scoring Value
PCE	Present	Material released	Not included in MNA due to low/infrequent concentrations	0
TCE	Present	Material released	In data set	0
	Present	Daughter product of PCE	In data set	2
DCE	Present	Material released	In data set	0
	Present	Daughter product of TCE If cis is > 80% of total DCE it is likely a daughter product 1,1-DCE can be chemical reaction product of TCA	In data set	2
VC	Present	Material released	In data set	0
	Present	Daughter product of DCE	In data set	2
1,1,1-TCA	Present	Material released	Not included in MNA due to low/infrequent concentrations	0
DCA	Present	Daughter product of TCA under reducing conditions	1,1,1-TCA not in MNA analysis (not released)	2
Ethene /Ethane	>0.01 mg/L	Daughter product of VC/ethene	Not currently analyzed	2
	>0.1 mg/L	Daughter product of VC/ethene	Not currently analyzed	3

Notes:
BTEX = benzene, toluene, ethylbenzene, xylene
C = centigrade
CO_2 = carbon dioxide
DCA = dichloroethane
DCE = dichloroethene
DO = dissolved oxygen
FE(III) =
mg/L = milligram/liter
MNA = monitored natural attenuation
mV = millivolts
nM/L = nanomoles/liter
ORP = oxidation reduction potential
PCE = tetrachloroethene
TCA = trichloroethane
TCE = trichloroethene

Abbreviations:
%: percent
--: not applicable
MDL: Method Detection Limit
CVOC: Chlorinated Volatile Organic Compound
MDL: Method Detection Limit
Std. Dev.: Standard Deviation

Notes:
All results are reported in mg/L.
Trace results (i.e., estimated values between reporting limit and MDL) were reported since 06/08/2016 and were used as detected values.
Outlier analysis was performed for all analyte-well pairs with sample size of 4 or larger and at least one detected result above the MDL.
Trend analyses was performed for all analyte-well pairs with sample a size of 8 or larger and at least one detected result above the MDL.
Italics: Trend analysis results based on data with less than a 25% detection rate should be considered with caution.
MKTF-02R is the replacement well for well MKTF-02; which was installed in 2021.

RE: 2021 GW Sampling 2nd Quarter OrderNo.: 2106C55

Dear Brian McLoughlin:

Hall Environmental Analysis Laboratory received 13 sample(s) on 6/23/2021 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman
Laboratory Manager

RE: 2021 GW Sampling 3rd Quarter OrderNo.: 2109B85

Dear Brian McLoughlin:

Hall Environmental Analysis Laboratory received 11 sample(s) on 9/21/2021 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman
Laboratory Manager
4901 Hawkins NE
Albuquerque, NM 87109

RE: 2021 GW Sampling 3rd Quarter OrderNo.: 2109C62

Dear Brian McLoughlin:

Hall Environmental Analysis Laboratory received 6 sample(s) on 9/22/2021 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman
Laboratory Manager

RE: 2021 GW Sampling 3rd Quarter OrderNo.: 2109E60

Dear Brian McLoughlin:

Hall Environmental Analysis Laboratory received 13 sample(s) on 9/24/2021 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman
Laboratory Manager
4901 Hawkins NE
Albuquerque, NM 87109

Refer to the QC Summary report and sample login checklist for flagged QC data and preservation information.

Qualifiers:

*	Value exceeds Maximum Contaminant Level.
D	Sample Diluted Due to Matrix
H	Holding times for preparation or analysis exceeded
ND	Not Detected at the Reporting Limit
PQL	Practical Quanitative Limit
S	% Recovery outside of range due to dilution or matrix
B	Analyte detected in the associated Method Blank
E	Value above quantitation range
J	Analyte detected below quantitation limits
P	Sample pH Not In Range
RL	Reporting Limit

RE: 2021 GW Sampling 4th Quarter OrderNo.: 2112A87

Dear Brian McLoughlin:

Hall Environmental Analysis Laboratory received 9 sample(s) on 12/16/2021 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman
Laboratory Manager

Case Narrative

WO#: **2112A87**
Date: **1/25/2022**

CLIENT: Marathon
Project: 2021 GW Sampling 4th Quarter

Analytical Notes Regarding EPA Method 8270:
Pyridine is reported with an "E" flag. The "E" flag is used to represent an estimated value. Pyridine was not detected in the sample, but the calibration curve for this compound did not meet the method requirements.

"S" flags denote that the sample surrogate or spike result is outside of the acceptable limits due to sample dilution or matrix interferences.

Analytical Results Report

(Continued)

Sample Location:	2112A87-007H (DUP 12/16/2021)		
Lab/Sample Number:	MBL0737-02	Collect Date:	12/16/21 00:00
Date Received:	12/22/21 13:59	Collected By:	
Matrix:	Water		

Analyte	Result	Units	PQL	Analyzed	Analyst	Method	Qualifier
Inorganics							
Cyanide	ND	mg/L	0.0100	12/23/21 12:00	BKP	EPA 335.4	

Authorized Signature,

Justin Doty For Todd Taruscio, Laboratory Manager

PQL	Practical Quantitation Limit
ND	Not Detected
MCL	EPA's Maximum Contaminant Level
Dry	Sample results reported on a dry weight basis
*	Not a state-certified analyte

This report shall not be reproduced except in full, without the written approval of the laboratory
The results reported related only to the samples indicated.

Sample Log-In Check List

Client Name: **Marathon** Work Order Number: **2112A87** RcptNo: **1**

Received By: **Andy Freeman** 12/16/2021 7:55:00 PM

Completed By: **Desiree Dominguez** 12/17/2021 8:29:26 AM

Reviewed By: CL 12/17/21

Chain of Custody

1. Is Chain of Custody complete? Yes ☑ No ☐ Not Present ☐
2. How was the sample delivered? Courier

Log In

3. Was an attempt made to cool the samples? Yes ☑ No ☐ NA ☐
4. Were all samples received at a temperature of >0° C to 6.0°C Yes ☐ No ☑ NA ☐
   Samples were collected the same day and chilled.
5. Sample(s) in proper container(s)? Yes ☑ No ☐
6. Sufficient sample volume for indicated test(s)? Yes ☑ No ☐
7. Are samples (except VOA and ONG) properly preserved? Yes ☑ No ☐ JM 12/17/21
8. Was preservative added to bottles? Yes ☑ No ☑ NA ☐
9. Received at least 1 vial with headspace <1/4" for AQ VOA? Yes ☑ No ☐ NA ☐
10. Were any sample containers received broken? Yes ☐ No ☑
11. Does paperwork match bottle labels? (Note discrepancies on chain of custody) Yes ☑ No ☐
12. Are matrices correctly identified on Chain of Custody? Yes ☑ No ☐
13. Is it clear what analyses were requested? Yes ☑ No ☐
14. Were all holding times able to be met? (If no, notify customer for authorization.) Yes ☑ No ☐

# of preserved bottles checked for pH: 24 (<2 or >12 unless noted)
Adjusted? yes
Checked by: JM 12/17/21

Special Handling (if applicable)

15. Was client notified of all discrepancies with this order? Yes ☐ No ☐ NA ☑

RE: 2021 GW Sampling 4th Quarter OrderNo.: 2112B70

Dear Brian McLoughlin:

Hall Environmental Analysis Laboratory received 10 sample(s) on 12/18/2021 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman

Case Narrative

WO#: **2112B70**
Date: **1/18/2022**

CLIENT: Marathon
Project: 2021 GW Sampling 4th Quarter

Analytical Notes Regarding EPA Method 8270:
Pyridine is reported with an "E" flag. The "E" flag is used to represent an estimated value. Pyridine was not detected in the sample, but the calibration curve for this compound did not meet the method requirements.

"S" flags denote that the sample surrogate or spike result is outside of the acceptable limits due to sample dilution or matrix interferences.

Vista Work Order No. 2112187

Mr. Andy Freeman
Hall Environmental Analytical Laboratory
4901 Hawkins NE
Albuquerque, NM 87109

Dear Mr. Freeman,

Enclosed are the results for the sample set received at Vista Analytical Laboratory on December 21, 2021 under your Project Name '2112B70'.

Vista Analytical Laboratory is committed to serving you effectively. If you require additional information, please contact me at 916-673-1520 or by email at jfox@vista-analytical.com.

Thank you for choosing Vista as part of your analytical support team.

Sincerely,

Jamie Fox
Laboratory Director

Vista Analytical Laboratory certifies that the report herein meets all the requirements set forth by NELAP for those applicable test methods. Results relate only to the samples as received by the laboratory. This report should not be reproduced except in full without the written approval of Vista.

Vista Work Order No. 2112187
Case Narrative

Sample Condition on Receipt:

One groundwater sample and one aqueous sample were received and stored securely in accordance with Vista standard operating procedures and EPA methodology. The samples were received in good condition and within the recommended temperature requirements.

Analytical Notes:

PFAS Isotope Dilution Method

Sample "OW-63" contained particulate and was centrifuged prior to extraction.

The samples were extracted and analyzed for a selected list of PFAS using Vista's PFAS Isotope Dilution Method. The results for PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Results for all other analytes include the linear isomers only.

Holding Times

The samples were extracted and analyzed within the hold times.

Quality Control

The Initial Calibration and Continuing Calibration Verifications met the acceptance criteria.

A Method Blank and Ongoing Precision and Recovery (OPR) sample were extracted and analyzed with the preparation batch. No analytes were detected in the Method Blank above the Reporting Limit. The OPR recoveries were within the method acceptance criteria.

The labeled standard recoveries for all QC and field samples were within the acceptance criteria.

RL - Reporting limit

Results reported to RL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

RL - Reporting limit

Results reported to RL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

RL - Reporting limit

Results reported to RL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

DATA QUALIFIERS & ABBREVIATIONS

B	This compound was also detected in the method blank
Conc.	Concentration
CRS	Cleanup Recovery Standard
D	Dilution
DL	Detection Limit
E	The associated compound concentration exceeded the calibration range of the instrument
H	Recovery and/or RPD was outside laboratory acceptance limits
I	Chemical Interference
IS	Internal Standard
J	The amount detected is below the Reporting Limit/LOQ
LOD	Limit of Detection
LOQ	Limit of Quantitation
M	Estimated Maximum Possible Concentration (CA Region 2 projects only)
MDL	Method Detection Limit
NA	Not applicable
ND	Not Detected
OPR	Ongoing Precision and Recovery sample
P	The reported concentration may include contribution from chlorinated diphenyl ether(s).
Q	The ion transition ratio is outside of the acceptance criteria.
RL	Reporting Limit
RL	For 537.1, the reported RLs are the MRLs.
TEQ	Toxic Equivalency, sum of the toxic equivalency factors (TEF) multiplied by the sample concentrations.
TEQMax	TEQ calculation that uses the detection limit as the concentration for non-detects
TEQMin	TEQ calculation that uses zero as the concentration for non-detects
TEQRisk	TEQ calculation that uses ½ the detection limit as the concentration for non-detects
U	Not Detected (specific projects only)
*	See Cover Letter

Unless otherwise noted, solid sample results are reported in dry weight. Tissue samples are reported in wet weight.

RE: 2021 GW Sampling 4th Quarter OrderNo.: 2112C34

Dear Brian McLoughlin:

Hall Environmental Analysis Laboratory received 9 sample(s) on 12/21/2021 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman
Laboratory Manager

Case Narrative

WO#: **2112C34**
Date: **1/18/2022**

CLIENT: Marathon
Project: 2021 GW Sampling 4th Quarter

Analytical Notes Regarding EPA Method 8270:
Pyridine is reported with an "E" flag. The "E" flag is used to represent an estimated value. Pyridine was not detected in the sample, but the calibration curve for this compound did not meet the method requirements.

"S" flags denote that the sample surrogate or spike result is outside of the acceptable limits due to sample dilution or matrix interferences.

RE: 2021 GW Sampling 4th Quarter OrderNo.: 2112D00

Dear Brian McLoughlin:

Hall Environmental Analysis Laboratory received 7 sample(s) on 12/22/2021 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman
Laboratory Manager

Case Narrative

WO#: **2112D00**
Date: **1/18/2022**

CLIENT: Marathon
Project: 2021 GW Sampling 4th Quarter

Analytical Notes Regarding EPA Method 8270:
Pyridine is reported with an "E" flag. The "E" flag is used to represent an estimated value. Pyridine was not detected in the sample, but the calibration curve for this compound did not meet the method requirements.

"S" flags denote that the sample surrogate or spike result is outside of the acceptable limits due to sample dilution or matrix interferences.

RE: 2021 GW Sampling 4th Quarter OrderNo.: 2112E16

Dear Brian McLoughlin:

Hall Environmental Analysis Laboratory received 7 sample(s) on 12/28/2021 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman
Laboratory Manager

Case Narrative

WO#: **2112E16**
Date: **1/25/2022**

CLIENT: Marathon
Project: 2021 GW Sampling 4th Quarter

Analytical Notes Regarding EPA Method 8270:
Pyridine is reported with an "E" flag. The "E" flag is used to represent an estimated value. Pyridine was not detected in the sample, but the calibration curve for this compound did not meet the method requirements.

"S" flags denote that the sample surrogate or spike result is outside of the acceptable limits due to sample dilution or matrix interferences.

ANALYTICAL REPORT

January 12, 2022

Hall Environmental Analysis Laboratory

Sample Delivery Group:	L1446725
Samples Received:	12/30/2021
Project Number:	2112E16
Description:	

Report To: Andy Freeman
4901 Hawkins NE
Albuquerque, NM 87109

Entire Report Reviewed By: John V Hawkins

John Hawkins
Project Manager

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.
ND	Not detected at the Reporting Limit (or MDL where applicable).
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
P1	RPD value not applicable for sample concentrations less than 5 times the reporting limit.

Sample Log-In Check List

Client Name: Marathon | Work Order Number: 2112E16 | RcptNo: 1

Received By: Desiree Dominguez 12/28/2021 3:00:00 PM DD

Completed By: Desiree Dominguez 12/28/2021 3:06:52 PM DD

Reviewed By: JR 12.28.21

Chain of Custody

1. Is Chain of Custody complete?	Yes ☑	No ☐	Not Present ☐
2. How was the sample delivered?	Courier		

Log In

3. Was an attempt made to cool the samples?	Yes ☑	No ☐	NA ☐
4. Were all samples received at a temperature of >0° C to 6.0°C	Yes ☑	No ☐	NA ☐
5. Sample(s) in proper container(s)?	Yes ☑	No ☐	
6. Sufficient sample volume for indicated test(s)?	Yes ☑	No ☐	
7. Are samples (except VOA and ONG) properly preserved?	Yes ☑	No ☐	JR 12/28/21
8. Was preservative added to bottles?	Yes ☑	No ☑	NA ☐
9. Received at least 1 vial with headspace <1/4" for AQ VOA?	Yes ☑	No ☐	NA ☐
10. Were any sample containers received broken?	Yes ☐	No ☑	
11. Does paperwork match bottle labels? (Note discrepancies on chain of custody)	Yes ☑	No ☐	
12. Are matrices correctly identified on Chain of Custody?	Yes ☑	No ☐	
13. Is it clear what analyses were requested?	Yes ☑	No ☐	
14. Were all holding times able to be met? (If no, notify customer for authorization.)	Yes ☑	No ☐	

# of preserved bottles checked for pH: 16 2 (<2 or >12 unless noted)

Adjusted? yes

Checked by: JR 12/28/21

Special Handling (if applicable)

15. Was client notified of all discrepancies with this order? Yes ☐ No ☐ NA ☑

RE: 2021 GW Sampling 1st Quarter OrderNo.: 2103354

Dear Brian McLoughlin:

Hall Environmental Analysis Laboratory received 9 sample(s) on 3/5/2021 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman

Case Narrative

WO#: **2103354**
Date: **4/8/2021**

CLIENT: Marathon
Project: 2021 GW Sampling 1st Quarter

Analytical Notes Regarding EPA Method 8015D:
The samples listed below had a single contaminant peak that was identified in the QC and the samples listed below. The contaminant peak was manually removed from the summation of the diesel range organcis results. The concentration of the contaminant peak, in the samples that was removed, is listed next to the sample name: MKTF-31 (0.03mg/L), MKTF-40 (0.085mg/L), MKTF-28 (0.033mg/L), MKKTF-27 (0.02mg/L), MKTF-25 (0.1mg/L), Dup 3-5-21 (0.11mg/L), LCS 58585 (0.06mg/L), LCSD 58585 (0.01mg/L). We are researching the source of the contamination to prevent this peak from appearing in the future.

Refer to the QC Summary report and sample login checklist for flagged QC data and preservation information.

Qualifiers:

*	Value exceeds Maximum Contaminant Level.	B	Analyte detected in the associated Method Blank
D	Sample Diluted Due to Matrix	E	Value above quantitation range
H	Holding times for preparation or analysis exceeded	J	Analyte detected below quantitation limits
ND	Not Detected at the Reporting Limit	P	Sample pH Not In Range
PQL	Practical Quanitative Limit	RL	Reporting Limit
S	% Recovery outside of range due to dilution or matrix

4. Were all samples received at a temperature of >0° C to 6.0°C Yes ☑ No ☐ NA ☐
5. Sample(s) in proper container(s)? Yes ☑ No ☐
6. Sufficient sample volume for indicated test(s)? Yes ☑ No ☐
7. Are samples (except VOA and ONG) properly preserved? Yes ☑ No ☐
8. Was preservative added to bottles? Yes ☐ No ☑ NA ☐
9. Received at least 1 vial with headspace <1/4" for AQ VOA? Yes ☑ No ☐ NA ☐
10. Were any sample containers received broken? Yes ☐ No ☑
11. Does paperwork match bottle labels? (Note discrepancies on chain of custody) Yes ☑ No ☐
12. Are matrices correctly identified on Chain of Custody? Yes ☑ No ☐
13. Is it clear what analyses were requested? Yes ☑ No ☐
14. Were all holding times able to be met? (If no, notify customer for authorization.) Yes ☑ No ☐

# of preserved bottles checked for pH: 21 (<2 or >12 unless noted)

Adjusted? NO

Checked by: ENM 3/5/21

(125mL unpres. - ENM 3/5/21

Special Handling (if applicable)

15. Was client notified of all discrepancies with this order? Yes ☐ No ☐ NA ☑

RE: 2021 GW Sampling 1st Quarter OrderNo.: 2103470

Dear Brian McLoughlin:

Hall Environmental Analysis Laboratory received 10 sample(s) on 3/9/2021 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman
Laboratory Manager

Case Narrative

WO#: **2103470**
Date: **4/8/2021**

CLIENT: Marathon
Project: 2021 GW Sampling 1st Quarter

Analytical Notes Regarding EPA Method 8015D:
The samples listed below had a single contaminant peak that was identified in the QC and the samples listed below. The contaminant peak was manually removed from the summation of the diesel range organcis results. The concentration of the contaminant peak, in the samples, that was removed is listed next to the sample name: MKTF-29 (0.36mg/L), KA-3 (0.65mg/L), Dup 3-9-21 (1.4mg/L), LCS 58742 (0.07mg/L), LCSD 58742 (0.02mg/L). We are researching the source of the contamination to prevent this peak from appearing in the future.

Analytical Notes Regarding EPA Method 504.1:
Sample Dup 3-9-21 was preserved with HCL.

Refer to the QC Summary report and sample login checklist for flagged QC data and preservation information.

Qualifiers:

*	Value exceeds Maximum Contaminant Level.	B	Analyte detected in the associated Method Blank
D	Sample Diluted Due to Matrix	E	Value above quantitation range
H	Holding times for preparation or analysis exceeded	J	Analyte detected below quantitation limits
ND	Not Detected at the Reporting Limit	P	Sample pH Not In Range
PQL	Practical Quanitative Limit	RL	Reporting Limit
S	% Recovery outside of range due to dilution or matrix		

Analytical Report
Lab Order: **2103470**
Date Reported: **4/8/2021**

Hall Environmental Analysis Laboratory, Inc.

CLIENT: Marathon
Client Sample ID: MKTF-24
Project: 2021 GW Sampling 1st Quarter
Collection Date: 3/9/2021 8:20:00 AM
Lab ID: 2103470-001F
Matrix: Aqueous
