Surr: DNOP	80.8	0	45.1-141		%Rec	1	3/23/2021 3:35:36 PM	58742

NOTES:
See the Case Narrative Regarding the DRO results listed above.

Refer to the QC Summary report and sample login checklist for flagged QC data and preservation information.

Qualifiers:

*	Value exceeds Maximum Contaminant Level.	B	Analyte detected in the associated Method Blank
D	Sample Diluted Due to Matrix	E	Value above quantitation range
H	Holding times for preparation or analysis exceeded	J	Analyte detected below quantitation limits
ND	Not Detected at the Reporting Limit	P	Sample pH Not In Range
PQL	Practical Quanitative Limit	RL	Reporting Limit
S	% Recovery outside of range due to dilution or matrix

ANALYTICAL REPORT

March 30, 2021

Revised Report

Hall Environmental Analysis Laboratory

Sample Delivery Group:	L1325480
Samples Received:	03/11/2021
Project Number:	
Description:	

Report To: Jackie Bolte
4901 Hawkins NE
Albuquerque, NM 87109

Entire Report Reviewed By:

John Hawkins
Project Manager

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

SAMPLE SUMMARY

2103470-002G OAPIS-1 L1325480-01 WW

Collected by	Collected date/time	Received date/time
	03/09/21 09:15	03/11/21 09:00

Method	Batch	Dilution	Preparation date/time	Analysis date/time	Analyst	Location
Wet Chemistry by Method 4500CN E-2011	WG1633983	1	03/12/21 20:01	03/14/21 04:29	SDL	Mt. Juliet, TN

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

Coef1	First Order Coefficient.
Coef2	Second Order Coefficient.
Corr.	Correlation Coefficient.
Incpt	Intercept.
Mass	Mass of parameter.
MDL	Method Detection Limit.
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
RSD	Relative Standard Deviation.
SDG	Sample Delivery Group.
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Slope	Slope of calibration curve.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Wavelength	Wavelength of parameter.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.
NI	Manual Integration Code to indicate that the peak was not integrated at all by the computer software.
LT	Manual Integration Code to indicate that the peak in question was inappropriately integrated to an area less than what it should be (i.e., peak area was cut).
GT	Manual Integration Code to indicate that the peak in question was inappropriately integrated to an area greater than it should be (i.e., peak tailing).
BA	Manual Integration Code to indicate that the baseline had to be adjusted correctly by the analyst.
WP	Manual Integration Code to indicate that the wrong peak was chosen.
CO	Manual Integration Code to indicate that the analyst had to split two co-eluting peaks apart that were not (or could not be) separated by the computer system.
RT	Manual Integration Code to indicate that the retention time for the peak in question has shifted from the expected retention time.
INT	Manual Integration Code to indicate that there was electronic interference (i.e., noise).

GLOSSARY OF TERMS

Qualifier	Description
J3	The associated batch QC was outside the established quality control range for precision.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
P1	RPD value not applicable for sample concentrations less than 5 times the reporting limit.

RE: 2021 GW Sampling 1st Quarter OrderNo.: 2103532

Dear Brian McLoughlin:

Hall Environmental Analysis Laboratory received 14 sample(s) on 3/10/2021 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman
Laboratory Manager

Case Narrative

WO#: **2103532**
Date: **4/8/2021**

CLIENT: Marathon
Project: 2021 GW Sampling 1st Quarter

Analytical Notes Regarding EPA Method 8015D:
The samples listed below had a single contaminant peak that was identified in the QC and the samples listed below. The contaminant peak was manually removed from the summation of the diesel range organcis results. The concentration of the contaminant peak, in the samples that was removed, is listed next to the sample name: NAPIS-2 (0.15mg/L), STP-1 NW (0.16mg/L), MKTF-50 0.1mg/L), MKTF-11 (0.22mg/L), MKTF-02 (0.6mg/L), West LDU (0.1mg/L), STP-EP (0.98mg/L), Dup 3-10-21 (0.01mg/L), LCS 58742 (0.07mg/L), LCSD 58742 (0.02mg/L), LCS 58760 (0.04mg/L), LCSD 58760 (0.01mg/L). We are researching the source of the contamination to prevent this peak from appearing in the future.

Analytical Notes Regarding EPA Method 504.1:
Sample EB 3-10-21 was preserved with HCL.

Surr: DNOP	94.5	0	45.1-141		%Rec	1	3/23/2021 3:59:26 PM	58742

NOTES:
See the Case Narrative Regarding the DRO results listed above.

Refer to the QC Summary report and sample login checklist for flagged QC data and preservation information.

Qualifiers:

*	Value exceeds Maximum Contaminant Level.	B	Analyte detected in the associated Method Blank
D	Sample Diluted Due to Matrix	E	Value above quantitation range
H	Holding times for preparation or analysis exceeded	J	Analyte detected below quantitation limits
ND	Not Detected at the Reporting Limit	P	Sample pH Not In Range
PQL	Practical Quanitative Limit	RL	Reporting Limit
S	% Recovery outside of range due to dilution or matrix

NOTES:
See the Case Narrative Regarding the DRO results listed above.

Refer to the QC Summary report and sample login checklist for flagged QC data and preservation information.

Qualifiers:

*	Value exceeds Maximum Contaminant Level.	B	Analyte detected in the associated Method Blank
D	Sample Diluted Due to Matrix	E	Value above quantitation range
H	Holding times for preparation or analysis exceeded	J	Analyte detected below quantitation limits
ND	Not Detected at the Reporting Limit	P	Sample pH Not In Range
PQL	Practical Quanitative Limit	RL	Reporting Limit
S	% Recovery outside of range due to dilution or matrix

Refer to the QC Summary report and sample login checklist for flagged QC data and preservation information.

Qualifiers:

*	Value exceeds Maximum Contaminant Level.
B	Analyte detected in the associated Method Blank
D	Sample Diluted Due to Matrix
E	Value above quantitation range
H	Holding times for preparation or analysis exceeded
J	Analyte detected below quantitation limits
ND	Not Detected at the Reporting Limit
P	Sample pH Not In Range
PQL	Practical Quanitative Limit
RL	Reporting Limit
S	% Recovery outside of range due to dilution or matrix

ANALYTICAL REPORT

March 19, 2021

Hall Environmental Analysis Laboratory

Sample Delivery Group:	L1326246
Samples Received:	03/12/2021
Project Number:	
Description:	

Report To: Jackie Bolte
4901 Hawkins NE
Albuquerque, NM 87109

Entire Report Reviewed By:

John Hawkins
Project Manager

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

Pace Analytical National

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

John Hawkins
Project Manager

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier Description

The remainder of this page intentionally left blank, there are no qualifiers applied to this SDG.

ADDRESS: 12065 Lebanon Rd		ACCOUNT #:	EMAIL:
CITY, STATE, ZIP: Mt. Juliet, TN 37122			1326246

ITEM	SAMPLE	CLIENT SAMPLE ID	BOTTLE TYPE	MATRIX	COLLECTION DATE	# CONTAINERS	ANALYTICAL COMMENTS
1	2103532-012G	STP-EP	500HDPEH2 SO4	Aqueous	3/10/2021 9:35:00 AM	1	COD- Lv. 4 J/MDL -Due 3/24 -01

Sample Receipt Checklist

COC Seal Present/Intact:	Y N	If Applicable	
COC Signed/Accurate:	Y N	VOA Zero Headspace:	Y N
Bottles arrive intact:	Y N	Pres.Correct/Check:	Y N
Correct bottles used:	Y N		
Sufficient volume sent:	Y N		
RAD Screen <0.5 mR/hr:	Y N		

SPECIAL INSTRUCTIONS / COMMENTS:

Please include the LAB ID and the CLIENT SAMPLE ID on all final reports. Please e-mail results to lab@hallenvironmental.com. Please return all coolers and blue ice. Thank you.

RE: 2021 GW Sampling 1st Quarter OrderNo.: 2103612

Dear Brian McLoughlin:

Hall Environmental Analysis Laboratory received 13 sample(s) on 3/11/2021 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman
Laboratory Manager

Case Narrative

WO#: **2103612**
Date: **4/8/2021**

CLIENT: Marathon
Project: 2021 GW Sampling 1st Quarter

Analytical Notes Regarding EPA Method 8015D:
The samples listed below had a single contaminant peak that was identified in the QC and the samples listed below. The contaminant peak was manually removed from the summation of the diesel range organcis results. The concentration of the contaminant peak, in the samples that was removed, is listed next to the sample name: MKTF-44 (2.7mg/L), MKTF-38 (3.1mg/L), Dup 3-11-21 (0.62mg/L), LCS 58760 (LCS 0.02mg/L), LCSD 58760 (1.05mg/L). We are researching the source of the contamination to prevent this peak from appearing in the future.

Refer to the QC Summary report and sample login checklist for flagged QC data and preservation information.

Qualifiers:

*	Value exceeds Maximum Contaminant Level.
B	Analyte detected in the associated Method Blank
D	Sample Diluted Due to Matrix
E	Value above quantitation range
H	Holding times for preparation or analysis exceeded
J	Analyte detected below quantitation limits
ND	Not Detected at the Reporting Limit
P	Sample pH Not In Range
PQL	Practical Quanitative Limit
RL	Reporting Limit
S	% Recovery outside of range due to dilution or matrix

Motor Oil Range Organics (MRO)	ND	0.60	0.60		mg/L	1	3/23/2021 11:54:29 PM	58760
Surr: DNOP	93.5	0	45.1-141		%Rec	1	3/23/2021 11:54:29 PM	58760

NOTES:
See the Case Narrative Regarding the DRO results listed above.

Refer to the QC Summary report and sample login checklist for flagged QC data and preservation information.

Qualifiers:

*	Value exceeds Maximum Contaminant Level.	B	Analyte detected in the associated Method Blank
D	Sample Diluted Due to Matrix	E	Value above quantitation range
H	Holding times for preparation or analysis exceeded	J	Analyte detected below quantitation limits
ND	Not Detected at the Reporting Limit	P	Sample pH Not In Range
PQL	Practical Quanitative Limit	RL	Reporting Limit
S	% Recovery outside of range due to dilution or matrix

Qualifiers:

*	Value exceeds Maximum Contaminant Level.
B	Analyte detected in the associated Method Blank
D	Sample Diluted Due to Matrix
E	Value above quantitation range
H	Holding times for preparation or analysis exceeded
J	Analyte detected below quantitation limits
ND	Not Detected at the Reporting Limit
P	Sample pH Not In Range
PQL	Practical Quanitative Limit
RL	Reporting Limit
S	% Recovery outside of range due to dilution or matrix

RE: 2021 GW Sampling 2nd Quarter OrderNo.: 2106895

Dear Brian McLoughlin:

Hall Environmental Analysis Laboratory received 10 sample(s) on 6/16/2021 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman
Laboratory Manager
4901 Hawkins NE
Albuquerque, NM 87109

Vista Work Order No. 2106147

Mr. Andy Freeman
Hall Environmental Analytical Laboratory
4901 Hawkins NE
Albuquerque, NM 87109

Dear Mr. Freeman,

Enclosed are the results for the sample set received at Vista Analytical Laboratory on June 18, 2021 under your Project Name '2106895'.

Vista Analytical Laboratory is committed to serving you effectively. If you require additional information, please contact me at 916-673-1520 or by email at mmaier@vista-analytical.com.

Thank you for choosing Vista as part of your analytical support team.

Sincerely,

for

Martha Maier
Laboratory Director

Vista Analytical Laboratory certifies that the report herein meets all the requirements set forth by NELAP for those applicable test methods. Results relate only to the samples as received by the laboratory. This report should not be reproduced except in full without the written approval of Vista.

Vista Work Order No. 2106147
Case Narrative

Sample Condition on Receipt:

One aqueous sample was received and stored securely in accordance with Vista standard operating procedures and EPA methodology. The sample was received in good condition and within the recommended temperature requirements.

Analytical Notes:

PFAS Isotope Dilution Method

The sample contained particulate and was centrifuged prior to extraction.

The sample was extracted and analyzed for a selected list of PFAS using Vista's PFAS Isotope Dilution Method. The results for PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Results for all other analytes include the linear isomers only.

Holding Times

The sample was extracted and analyzed within the hold times.

Quality Control

The Initial Calibration and Continuing Calibration Verifications met the acceptance criteria.

A Method Blank and Ongoing Precision and Recovery (OPR) sample were extracted and analyzed with the preparation batch. No analytes were detected in the Method Blank above the Reporting Limit. The OPR recoveries were within the method acceptance criteria.

The labeled standard recoveries for all QC and field samples were within the acceptance criteria.

RL - Reporting limit

Results reported to RL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

RL - Reporting limit

Results reported to RL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

DATA QUALIFIERS & ABBREVIATIONS

B	This compound was also detected in the method blank
Conc.	Concentration
CRS	Cleanup Recovery Standard
D	Dilution
DL	Detection Limit
E	The associated compound concentration exceeded the calibration range of the instrument
H	Recovery and/or RPD was outside laboratory acceptance limits
I	Chemical Interference
IS	Internal Standard
J	The amount detected is below the Reporting Limit/LOQ
LOD	Limit of Detection
LOQ	Limit of Quantitation
M	Estimated Maximum Possible Concentration (CA Region 2 projects only)
MDL	Method Detection Limit
NA	Not applicable
ND	Not Detected
OPR	Ongoing Precision and Recovery sample
P	The reported concentration may include contribution from chlorinated diphenyl ether(s).
Q	The ion transition ratio is outside of the acceptance criteria.
RL	Reporting Limit
RL	For 537.1, the reported RLs are the MRLs.
TEQ	Toxic Equivalency, sum of the toxic equivalency factors (TEF) multiplied by the sample concentrations.
TEQMax	TEQ calculation that uses the detection limit as the concentration for non-detects
TEQMin	TEQ calculation that uses zero as the concentration for non-detects
TEQRisk	TEQ calculation that uses ½ the detection limit as the concentration for non-detects
U	Not Detected (specific projects only)
*	See Cover Letter

Unless otherwise noted, solid sample results are reported in dry weight. Tissue samples are reported in wet weight.

Chain of Custody

1. Is Chain of Custody complete? Yes ☑ No ☐ Not Present ☐
2. How was the sample delivered? Courier

Log In

3. Was an attempt made to cool the samples? Yes ☑ No ☐ NA ☐
4. Were all samples received at a temperature of >0° C to 6.0°C Yes ☐ No ☑ NA ☐
   Samples were collected the same day and chilled.
5. Sample(s) in proper container(s)? Yes ☑ No ☐
6. Sufficient sample volume for indicated test(s)? Yes ☑ No ☐
7. Are samples (except VOA and ONG) properly preserved? Yes ☑ No ☐
8. Was preservative added to bottles? Yes ☐ No ☑ NA ☐
9. Received at least 1 vial with headspace <1/4" for AQ VOA? Yes ☑ No ☐ NA ☐
10. Were any sample containers received broken? Yes ☐ No ☑
11. Does paperwork match bottle labels? (Note discrepancies on chain of custody) Yes ☑ No ☐
12. Are matrices correctly identified on Chain of Custody? Yes ☑ No ☐
13. Is it clear what analyses were requested? Yes ☑ No ☐
14. Were all holding times able to be met? (If no, notify customer for authorization.) Yes ☑ No ☐

# of preserved bottles checked for pH: 21 (<2 or >12 unless noted)
Adjusted? NO
Checked by: SPA 6.17.21

Special Handling (if applicable)

15. Was client notified of all discrepancies with this order? Yes ☐ No ☐ NA ☑

RE: GW Sampling 2nd Quarter OrderNo.: 2106976

Dear Brian McLoughlin:

Hall Environmental Analysis Laboratory received 9 sample(s) on 6/17/2021 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman
Laboratory Manager
4901 Hawkins NE

RE: 2021 GW Sampling 3rd Quarter OrderNo.: 2109786

Dear Brian McLoughlin:

Hall Environmental Analysis Laboratory received 11 sample(s) on 9/15/2021 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman
Laboratory Manager

Sample Log-In Check List

Client Name: **Marathon** Work Order Number: **2109786** RcptNo: 1

Received By: **Scott Anderson** 9/15/2021 3:45:00 PM SPL

Completed By: **Desiree Dominguez** 9/15/2021 3:49:20 PM DD

Reviewed By: SGL 9/15/21

Chain of Custody

1. Is Chain of Custody complete? Yes ☑ No ☐ Not Present ☐
2. How was the sample delivered? Client

Log In

3. Was an attempt made to cool the samples? Yes ☑ No ☐ NA ☐
4. Were all samples received at a temperature of >0° C to 6.0°C Yes ☑ No ☐ NA ☐
   Samples were collected the same day and chilled.
5. Sample(s) in proper container(s)? Yes ☑ No ☐
6. Sufficient sample volume for indicated test(s)? Yes ☑ No ☐
7. Are samples (except VOA and ONG) properly preserved? Yes ☑ No ☐
8. Was preservative added to bottles? Yes ☐ No ☑ NA ☐
9. Received at least 1 vial with headspace <1/4" for AQ VOA? Yes ☐ No ☐ NA ☑
10. Were any sample containers received broken? Yes ☐ No ☑
11. Does paperwork match bottle labels? (Note discrepancies on chain of custody) Yes ☑ No ☐
12. Are matrices correctly identified on Chain of Custody? Yes ☑ No ☐
13. Is it clear what analyses were requested? Yes ☑ No ☐
14. Were all holding times able to be met? (If no, notify customer for authorization.) Yes ☑ No ☐

# of preserved bottles checked for pH: 24 (<2 or >12 unless noted)
Adjusted? NO
Checked by: SGL 9/15/21 TMC 9/15/21

Special Handling (if applicable)

15. Was client notified of all discrepancies with this order? Yes ☐ No ☐ NA ☑

Reviewer: Mike Phillips, Senior Chemist	

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Equipment blanks
- Trip blanks

Tier II Data Validation Report Summary

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

Client Sample ID	Laboratory Sample Number
MKTF-10	2106C55-001
NAPIS-1	2106C55-002
OW-58A	2106C55-003
OW-58	2106C55-004
OW-57	2106C55-005
MKTF-38	2106C55-006
MKTF-18	2106C55-007
MKTF-36	2106C55-008
MKTF-35	2106C55-009
EB 6/23/2021	2106C55-011
DUP 6/23/2021	2106C55-012
Trip Blank	2106C55-013

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- ○ Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ⊗ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ✓ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Equipment and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ○ Laboratory Duplicates (Item 22)
- ⊗ Data Relationships (Item 23)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, February 2021.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

Qualifier	Definition
J	Estimated concentration
J+	The result is an estimated concentration, but may be biased high
J-	The result is an estimated concentration, but may be biased low
UJ	Estimated reporting limit
U	Evaluated to be undetected at the reporting limit
JB	Estimated concentration due to blank contamination

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 1,609 data points. The data completeness calculation does not include any submitted blank sample results. No data points were rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? Yes

Comments: The laboratory did not report non-conformances related to the analytical data for this sample set.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

D – Sample diluted due to matrix.

E – Value above quantitation range. *This laboratory flag was applied only to QC sample results in the laboratory report, and qualification of sample data was not required.*

J – Analyte detected below quantitation limits.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

Method	Sample(s)	Analyte(s)	Dilution Factor
8015D	OW-58	TPH DRO and MRO	2
200.7	Multiple Samples	Select Dissolved and Total Metals	5
200.8	MKTF-10, OW-58A	Dissolved Lead and Thallium	5
245.1	OW-58A	Dissolved Mercury	5
300.0	Multiple Samples	Select Anions	5
8015D	NAPIS-1, MKTF-18	TPH GRO	5
8260B	NAPIS-1	MTBE	5
8260B	MKTF-18	VOCs	5
200.7	Multiple Samples	Select Dissolved and Total Metals	10
8015D	MKTF-10, MKTF-35	TPH GRO	10
8015D	OW-57	TPH DRO and MRO	10
8260B	MKTF-10, MKTF-35	VOCs	10
200.7	OW-58	Dissolved Iron	20
200.7	MKTF-36	Dissolved and Total Iron and Barium	20
300.0	MKTF-38	Sulfate	20
300.0	Multiple Samples	Chloride	20
8015D	MKTF-36	TPH DRO and MRO	20
8270C	Multiple Samples	Select SVOCs	20
200.7	MKTF-35, DUP 6/23/2021	Total Aluminum and Iron	50
300.0	MKTF-35, DUP 6/23/2021	Chloride	50
8015D	Multiple Samples	TPH GRO	50
8260B	Multiple Samples	Select VOCs	50

VALIDATION CRITERIA CHECKLIST

Method	Sample(s)	Analyte(s)	Dilution Factor
300.0	MKTF-10	Chloride	100
8015D	OW-58	TPH GRO	100
8260B	MKTF-10, OW-58, MKTF-35	Select VOCs	100
8260B	MKTF-36	Toluene	500
8260B	Multiple Samples	Benzene	500
8260B	OW-58	Benzene	1,000

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? Yes

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC.

6. Were samples received in good condition within method-specified requirements? No

Comments: Samples were received on ice, in good condition, and with the cooler temperatures outside the recommended temperature range of 4°C ± 2°C between 6.7°C and 12.2°C as noted on the CoC and Sample Log-in Check List.

The cooler temperatures above 6°C were evaluated to be acceptable since the samples were received at the laboratory on the same day (within 24 hours) of the last sample collection time, and temperature equilibrium had not been established.

7. Were samples extracted/digested and analyzed within method-specified or technical holding times? Yes

Comments: The samples were extracted/digested and analyzed within method-specific holding times.

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. Yes

Comments: The results were reported in concentration units of micrograms per liter (µg/L) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.

9. Did the laboratory provide any specific initial and/or continuing calibration results? No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

Method	Analyte	Batch	Concentration
8015D	**TPH DRO**	**60947**	**0.049 mg/L**
8015D	TPH DRO	60941	0.038 mg/L
8270C	**Bis(2-ethylhexyl)phthalate**	**60957**	**5.0 µg/L**

Detections of bis(2-ethylhexyl)phthalate and TPH DRO in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of TPH DRO in the associated samples that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

Method	Analytes	Batch	MS Sample Source
200.7	Total Metals	61019	NAPIS-1, OW-58A
200.7	Dissolved Metals	A79403	Not Prepared
200.7	Dissolved Metals	B79403	EB 6/23/2021
200.8	Total Metals	61019	MKTF-10
200.8	Dissolved Metals	B79527	Not Prepared
245.1	Total Mercury	61000	Not Prepared
245.1	Dissolved Mercury	61150	OW-58A
300.0	Anions	R79334	EB 6/23/2021
300.0	Chloride	R79574	Not Prepared
300.0	Chloride	R79589	Not Prepared
504.1	EDB	60990	Not Prepared
8015D	DRO and MRO	60941	Not Prepared
8015D	DRO and MRO	60947	Not Prepared
8015D	GRO	G79445	MKTF-35
8015D	GRO	GW79410	Not Prepared
8260B	VOCs	A79429	Not Prepared
8260B	VOCs	B79410	Not Prepared
8260B	VOCs	R79445	MKTF-35
8260B	Benzene	R79505	Not Prepared
8270 SIM	SVOCs	60905	Not Prepared
8270C	SVOCs	60957	Not Prepared

Not Prepared – Matrix spikes were not prepared for this batch.

VALIDATION CRITERIA CHECKLIST

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? No

Comments: The percent recoveries and RPDs for MS/MSDs prepared from project samples were within data validation and laboratory QC limits or were not applicable because the unspiked amount was more than four times the spike added, with the following exceptions.

Method	Analyte	Batch	MS Recovery	MSD Recovery	MS/MSD QC Limits
200.7	**Total Aluminum**	**61019**	**133%**	**130%**	**75-125%**
200.8	**Total Arsenic**	**61019**	**126%**	**-----**	**75-125%**

Detections of total aluminum and total arsenic in the associated samples were assigned J+ qualifiers due to evidence of potential high bias. Non-detections of these analytes in the associated samples did not require qualification.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exception.

The LCS recoveries for dissolved nickel in Method 200.7 batches A79403 and B79403 were outside the data validation acceptance limits of 70-130% at 56.0% and 61.1%, respectively. Detections of dissolved nickel in the associated samples in these batches were assigned J- qualifiers due to evidence of potential low bias. Non-detect results were assigned UJ qualifiers.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

Since Method 8270C surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the samples MKTF-10, NAPIS-1, and MKTF-36, and qualification of sample data was not required.

Since Method 8270 SIM surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the sample MKTF-36, and qualification of sample data was not required.

The TPH DRO and TPH MRO results for samples OW-57 and MKTF-36 were not qualified based on the surrogate non-conformances in the Method 8015D Modified analyses since the applied dilutions of 10 and 20 times, respectively, for these samples resulted in surrogate concentrations below routinely calibrated levels, and those results were deemed unreliable and possibly inaccurate.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, and one equipment blank sample, EB-6/23/2021, were collected as part of this sample set.

VALIDATION CRITERIA CHECKLIST

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were reported as not detected in the trip, field, and equipment blanks, with the exceptions listed in the following table.

Blank Sample ID	Method	Analyte	Concentration
Trip Blank	**8260B**	**Benzene**	**0.36 µg/L**
EB 6/23/2021	**200.7**	**Dissolved Zinc**	**0.0091 mg/L**
EB 6/23/2021	**300.0**	**Nitrate as N**	**0.043 mg/L**
EB 6/23/2021	8015D	TPH DRO	0.024 mg/L
EB 6/23/2021	**8015D**	**TPH GRO**	**0.030 mg/L**
EB 6/23/2021	**8260B**	**1,2,4-Trimethylbenzene**	**0.24 µg/L**
EB 6/23/2021	**8260B**	**1,4-Dichlorobenzene**	**0.27 µg/L**
EB 6/23/2021	**8260B**	**2-Butanone**	**1.8 µg/L**
EB 6/23/2021	**8260B**	**Acetone**	**7.8 µg/L**
EB 6/23/2021	8260B	Benzene	0.82 µg/L
EB 6/23/2021	8260B	Bromodichloromethane	0.22 µg/L
EB 6/23/2021	**8260B**	**Ethylbenzene**	**0.35 µg/L**
EB 6/23/2021	**8260B**	**Naphthalene**	**0.31 µg/L**
EB 6/23/2021	8260B	Styrene	0.30 µg/L
EB 6/23/2021	**8260B**	**Toluene**	**0.97 µg/L**
EB 6/23/2021	**8260B**	**Total Xylenes**	**0.56 µg/L**
EB 6/23/2021	8270C	Bis(2-ethylhexyl)phthalate	4.8 µg/L

Detections of the identified analytes in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of the identified analytes in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

The DRO results for the samples in batch 60947 and the bis(2-ethylhexyl)phthalate results for the samples in batch 60957 were previously qualified due to laboratory blank contamination; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP 6/23/2021 was collected as a field duplicate of sample MKTF-35.

VALIDATION CRITERIA CHECKLIST

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exceptions.

RPD values could not be calculated for dissolved aluminum and nitrate as N for the field duplicate pair MKTF-35 and DUP 6/23/2021 since the analytes were detected in the duplicate sample and were undetected in the parent sample. As the detections in the duplicate sample were greater than two times the reporting limits, dissolved aluminum and nitrate as N were qualified as J and UJ for the duplicate and parent samples, respectively.

The RPD values for multiple analytes exceeded the data validation limit of 30%, which was evidence of poor precision. These analyte results were qualified as J for samples MKTF-35 and DUP 6/23/2021.

The RPD value for dissolved iron greatly exceeded the data validation limit of 30% at 196.3%. The dissolved iron results were qualified as J for the parent and duplicate samples, MKTF-35 and DUP 6/23/2021, as well as the remaining associated samples based on evidence of extremely poor precision (RPD > 100%). The non-detected dissolved iron result in sample EB 6/23/2021 was qualified as UJ.

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? N/A

Comments: Laboratory duplicate samples were not prepared for this sample set.

23. Were the following data relationships realistic and acceptable?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270), and the results were in agreement? No

Comments: Target analytes were not reported by more than one method in this data set, with the following exceptions.

Target analytes 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1-methylnaphthalene, 2-methylnaphthalene, hexachlorobutadiene, and naphthalene were reported by both Method 8260B and Method 8270C. 1,2-Dibromoethane was reported from analyses by both Method 8260B and Method 504.1. These analytes were reported as not detected by both methods, or one or both results were within 5 times the applicable reporting limit, with the following exceptions.

Naphthalene was detected by both Method 8260B and Method 8270C in samples MKTF-10 and MKTF-36 at concentrations greater than 5 times the applicable reporting limits. The differences were not within the variability of the analytical methods, with RPD values of 50.0% and 43.8%, respectively. The naphthalene results for these samples were assigned J qualifiers based to the inconsistencies between the analytical findings.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The total metals concentrations were greater than or equal to the dissolved fractions, with the following exceptions.

Sample ID	Analyte	Total Result	Dissolved Result	Reporting Limit	Units	RPD
OW-58	Antimony	ND	0.00046	0.0010 / 0.0010	mg/L	----- ♦
OW-58A	Antimony	ND	0.00046	0.0010 / 0.0010	mg/L	----- ♦
OW-58A	Arsenic	0.0043	0.0044	0.0010 / 0.0010	mg/L	2.3%
OW-58	Barium	4.5	4.6	0.030 / 0.010	mg/L	2.2%
MKTF-36	Barium	7.4	7.5	0.060 / 0.040	mg/L	1.3%
NAPIS-1	Boron	0.77	0.83	0.20 / 0.040	mg/L	7.5%
OW-58A	Boron	0.47	0.49	0.040 / 0.040	mg/L	4.2%
MKTF-35	Boron	0.33	0.34	0.040 / 0.040	mg/L	3.0%

VALIDATION CRITERIA CHECKLIST

Sample ID	Analyte	Total Result	Dissolved Result	Reporting Limit	Units	RPD
MKTF-10	Iron	9.5	9.7	0.50 / 0.20	mg/L	2.1%
MKTF-10	Manganese	5.7	5.9	0.020 / 0.020	mg/L	3.4%

Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

RPD values could not be calculated for dissolved aluminum and nitrate as N for the field duplicate pair MKTF-35 and DUP 6/23/2021 since the analytes were detected in the duplicate sample and were undetected in the parent sample. As the detections in the duplicate sample were greater than two times the reporting limits, dissolved aluminum and nitrate as N were qualified as J and UJ for the duplicate and parent samples, respectively.

The RPD values for multiple analytes exceeded the data validation limit of 30%, which was evidence of poor precision. These analyte results were qualified as J for samples MKTF-35 and DUP 6/23/2021.

The RPD value for dissolved iron greatly exceeded the data validation limit of 30% at 196.3%. The dissolved iron results were qualified as J for the parent and duplicate samples, MKTF-35 and DUP 6/23/2021, as well as the remaining associated samples based on evidence of extremely poor precision (RPD > 100%). The non-detect dissolved iron result in sample EB 6/23/2021 was qualified as UJ.

DATA QUALIFICATION SUMMARY

Abbreviation	Reason
LR-LCS	The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias.
HR-MS	The MS and/or MSD percent recovery was greater than the upper acceptable limit indicating possible matrix interference.
MBD	Method blank detection
TBD	Trip blank detection
EBD	Equipment blank detection
ERPD-FD	High field duplicate RPD.
DATA-COMP	Analytical results for analyte by different methods did not meet comparability limits.
MDLRL	Flagged by the laboratory: The result was greater than the MDL but less than the RL.

Tier II Data Validation Report Summary

Client: Marathon Oil	Laboratory: Hall Environmental Analysis Laboratory
Project Name: Western Refining Southwest, Quarterly GW	Sample Matrix: Groundwater
Project Number: 697-080-001 Task 0016	Sample Start Date: 09/21/2021
Date Validated: 12/01/2021	Sample End Date: 09/21/2021
Parameters Included: ▪ Volatile Organic Compounds (VOC) by Environmental Protection Agency (EPA) Test Methods for Evaluating Solid Waste (SW-846) Method 8260B ▪ 1,2-Dibromoethane (EDB) by EPA Method 504.1 ▪ Semivolatile Organic Compounds (SVOC) by SW-846 Methods 8270C and 8270C with Selective Ion Monitoring (SIM) ▪ Total Petroleum Hydrocarbons (TPH) Gasoline Range Organics (GRO) by SW-846 Method 8015D ▪ TPH Diesel Range Organics (DRO) and Motor Oil Range Organics (MRO) by SW-846 Method 8015D Modified ▪ Total and Dissolved Metals by EPA Methods 200.7 and 200.8 ▪ Total and Dissolved Mercury by EPA Method 245.1 ▪ Anions by EPA Method 300.0	
Laboratory Project ID: 2109B85	
Data Validator: Kyle Power, Environmental Chemist	
Reviewer: Charles Ballek, Senior Chemist	

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blank
- Equipment blank
- Field blank

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

Client Sample ID	Laboratory Sample Number
EB-09-21-21	2109B85-001
MKTF-40	2109B85-002
MKTF-25	2109B85-003
MKTF-24	2109B85-004
OAPIS-1	2109B85-005
NAPIS-2	2109B85-006
NAPIS-3	2109B85-007
KA-3	2109B85-008
FB-09-21-21	2109B85-009
DUP-09-21-21	2109B85-0010
Trip Blank	2109B85-0011

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ⊗ Holding Times and Preservation (Items 6 and 7)
- ○ Initial and Continuing Calibrations (Items 9 and 10)
- ✓ Laboratory Blanks (Items 11 and 12)
- ⊗ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ✓ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ✓ Field Duplicate (Items 20 and 21)
- ○ Laboratory Duplicates (Item 22)
- ✓ Data Relationships (Item 23)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, February 2021.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

Qualifier	Definition
J	Estimated concentration
J+	The result is an estimated concentration, but may be biased high
UJ	Estimated reporting limit
U	Evaluated to be undetected at the reporting limit
JB	Estimated concentration due to blank contamination

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 656 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST	
1. Was the report free of non-conformances identified by the laboratory?	Yes
Comments: The laboratory did not identify non-conformances regarding the analytical data.	
2. Were the data free of data qualification flags and/or notes used by the laboratory? If no, define.	No
Comments: The laboratory used the following data qualification flags with this data set. D – Sample diluted due to matrix J – Analyte detected below quantitation limits R – RPD outside control limits S – % Recovery outside of range due to dilution or matrix * – Value exceeds Maximum Contaminant Level	
3. Were sample CoC forms and custody procedures complete?	Yes
Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times.	
4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable?	Yes
Comments: The detection limits appeared to be acceptable. The following dilutions were applied. Method 8260B: Dilutions of 5 to 100 times were applied for the VOC analysis of the samples. Method 8270C: Dilutions of 10 times were applied for the SVOC analysis of samples OAPIS-1 and NAPIS-2. A dilution of 10 times was applied for the 1,4-dioxane analysis of sample MKTF-25. Method 8015D (GRO): A dilution of 5 times was applied for the TPH GRO analysis of sample OAPIS-1; and dilutions of 10 times were applied for samples MKTF-25, MKTF-24, and NAPIS-2. Method 8015D (DRO/MRO): A dilution of 5 times was applied for the TPH DRO and MRO analyses of sample OAPIS-1. Method 200.7: Dilutions of 5 and 10 times were applied for the metals analyses of samples. Method 200.8: Dilutions of 5 times were applied for the total metal analyses of samples MKTF-40 and DUP-09-21-21. Method 300.0: Dilutions of 5 to 500 times were applied for the analyses of anions for the samples.	
5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC?	Yes
Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC.	
6. Were samples received in good condition within method-specified requirements?	No
Comments: Samples were received on ice, in good condition, and with the cooler temperatures outside the recommended temperature range of 4°C ± 2°C between 8.8°C and 13.4°C as noted on the *Sample Log-in Check List*. The cooler temperatures above 6°C were evaluated to be acceptable since the samples were received at the laboratory on the same day (within 24 hours) of the last sample collection time, and temperature equilibrium had not been established.	
7. Were samples extracted/digested and analyzed within method-specified or technical holding times?	Yes
Comments: The samples were extracted/digested and analyzed within method-specific holding times.	

VALIDATION CRITERIA CHECKLIST

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. — Yes

Comments: The results were reported in concentration units of micrograms per liter (µg/L) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.

9. Did the laboratory provide any specific initial and/or continuing calibration results? — No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? — N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? — Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks? — Yes

Comments: Target analytes were reported as not detected in the laboratory blanks.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? — Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batch. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

Method	Analytes	Batch	MS Sample Source
200.7	Total Metals	62794	EB-09-21-21 and MKTF-40
200.7	Dissolved Metals	B81654	EB-09-21-21
200.8	Total Metals	62794	MKTF-24 and MKTF-25
200.8	Dissolved Metals	C81686	EB-09-21-21
200.8	Dissolved Metals	C81765	MKTF-24
245.1	Mercury	62871	DUP-09-21-21
300.0	Anions	R81507	EB-09-21-21
300.0	Chloride	R81599	Not Prepared
504.1	EDB	62893	Trip Blank
8015D	TPH DRO and MRO	62819	Not Prepared
8260B	VOC	R81591	Not Prepared
8260B	VOC	R81622	Not Prepared
8260B	VOC	R81662	Not Prepared
8270C	SVOC	62838	Not Prepared
8270C SIM	SVOC	62813	Not Prepared
8015D	GRO	G81591	Not Prepared
8015D	GRO	G81622	Not Prepared
8015D	GRO	G81662	Not Prepared

Not Prepared – Matrix spikes were not prepared/reported for this batch.

VALIDATION CRITERIA CHECKLIST

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? — No

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation and laboratory QC limits, with the following exceptions.

Method 200.7: The laboratory noted that the MS/MSD RPD values for analytes in batch 62794 were outside QC limits; however, no MS sample is provided to confirm these values. Qualification was not required based on these findings.

The MS and MSD recoveries for total iron from batch 62794 were outside data validation QC limits of 75-125% at 141% and 136%, respectively. Iron was detected in associated samples and the results were assigned J+ qualifiers due to evidence of potential high bias. Total iron was not detected in sample EB-09-21-21 in this batch and qualification of that result was not required.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? — Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? — No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exception.

Method 8015D (DRO): **The LCS/LCSD RPD value for TPH DRO from batch 62819 exceeded the laboratory QC limit of 20% at 27.9%. The TPH DRO results were qualified as J due to evidence of poor precision.**

17. Were surrogate recoveries within laboratory QC limits? — Yes

Comments: Surrogate recoveries were within laboratory QC limits or were not applicable because the surrogates were diluted out.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? — Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB-09-21-21, and one equipment blank sample, EB-09-21-21, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? — No

Comments: Target analytes were reported as not detected in the trip, field, and equipment blanks, with the exceptions listed in the following table.

Blank Sample ID	Method	Analyte	Concentration
EB-09-21-21	8260B	Acetone	3.9 µg/L
EB-09-21-21	**8015D**	**TPH DRO**	**0.026 mg/L**
EB-09-21-21	**300.0**	**Nitrate**	**0.05 mg/L**
EB-09-21-21	**200.7**	**Zinc, Dissolved**	**0.008 mg/L**
FB-09-21-21	**8260B**	**Acetone**	**5.7 µg/L**

Detections of the identified analytes in the associated samples that were less than the reporting limits were qualified as U. Dissolved zinc results were greater than the blank detection but less than 10 times the blank concentration and were qualified as JB.

Non-detections of the identified analytes in the associated samples and results greater than 10 times the blank detections did not require qualification.

VALIDATION CRITERIA CHECKLIST

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP-09-21-21 was collected as a field duplicate of sample MKTF-40.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? Yes

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples.

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? N/A

Comments: Laboratory duplicate samples were not prepared/reported for this sample set.

23. Were the following data relationships realistic and acceptable?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270), and the results were in agreement? Yes

Comments: Target analytes were not reported by more than one method in this data set, with the following exception.

Target analyte 1,4-dichlorobenzene was reported by both Method 8260B and Method 8270C. This analyte was reported as not detected in the project samples by both methods.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The total metals concentrations were greater than or equal to the dissolved fractions, with the following exceptions.

Sample ID	Analyte	Total Result	Dissolved Result	Reporting Limit	Units	RPD
KA-3	Copper	0.0022	0.0026	0.0010	mg/L	16.7%
MKTF-40	Silver	0.0013	0.0015	0.0050	mg/L	14.3% ♦
EB-09-21-21	Zinc	ND	0.008	0.010	mg/L	----- ♦
MKTF-25	Zinc	ND	0.017	0.010	mg/L	----- ♦
MKTF-24	Zinc	0.008	0.013	0.010	mg/L	47.6% ♦
OAPIS-1	Zinc	0.037	0.039	0.050	mg/L	5.3% ♦
NAPIS-2	Zinc	ND	0.011	0.010	mg/L	----- ♦
NAPIS-3	Zinc	ND	0.011	0.010	mg/L	----- ♦
KA-3	Zinc	0.0089	0.019	0.010	mg/L	72.4% ♦
DUP-09-21-21	Zinc	ND	0.017	0.010	mg/L	----- ♦

♦ = *Both of the detections were less than 2 times the applicable reporting limits and qualification of data was not required.*

The analytical results greater than 2 times the applicable RLs for total and dissolved metals fractions were within the RPD limit of 30% indicating that the results were comparable, and qualification of the data was not required.

FIELD DUPLICATE SUMMARY

Client Sample ID: MKTF-40 Field Duplicate Sample ID: DUP-09-21-21				
Analyte	**Method**	**Laboratory Result**	**Duplicate Result**	**Relative Percent Difference (RPD)**
1,1-Dichloroethane	8260B	0.78 µg/L	0.79 µg/L	1.3% +/-RL

Nitrogen, Nitrate	300.0	0.14 mg/L	0.14 mg/L	0.0% +/-RL
Sulfate	300.0	550 mg/L	560 mg/L	1.8%

Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

DATA QUALIFICATION SUMMARY

Abbreviation	Reason
HR-MS	The MS and/or MSD percent recovery was greater than the upper acceptable limit indicating possible matrix interference.
ERPD-LCS	The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision.
FBD	Field blank detection
EBD	Equipment blank detection
MDLRL	Flagged by the laboratory: The result was greater than the MDL but less than the RL.

Tier II Data Validation Report Summary

Client: Marathon Oil	Laboratory: Hall Environmental Analysis Laboratory
Project Name: Western Refining Southwest, Quarterly GW	Sample Matrix: Groundwater
Project Number: 697-080-001 Task 0016	Sample Start Date: 09/22/2021
Date Validated: 12/09/2021	Sample End Date: 09/22/2021
Parameters Included: ▪ Volatile Organic Compounds (VOC) by Environmental Protection Agency (EPA) Test Methods for Evaluating Solid Waste (SW-846) Method 8260B ▪ Semivolatile Organic Compounds (SVOC) by SW-846 Methods 8270C and 8270C with Selective Ion Monitoring (SIM) ▪ Total Petroleum Hydrocarbons (TPH) Gasoline Range Organics (GRO) by SW-846 Method 8015D ▪ TPH Diesel Range Organics (DRO) and Motor Oil Range Organics (MRO) by SW-846 Method 8015D Modified ▪ Total and Dissolved Metals by EPA Methods 200.7 and 200.8 ▪ Total and Dissolved Mercury by EPA Method 245.1 ▪ Anions by EPA Method 300.0	
Laboratory Project ID: 2109C62	
Data Validator: Kyle Power, Environmental Chemist	
Reviewer: Charles Ballek, Senior Chemist	

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Field blank
- Equipment blank

Tier II Data Validation Report Summary

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

Client Sample ID	Laboratory Sample Number
EB-09-22-21	2109C62-001
MKTF-09-22-21	2109C62-002
STP-1-NW	2109C62-003
OW-59	2109C62-004
FB-09-22-21	2109C62-005
DUP-09-22-21	2109C62-006

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- ○ Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ⊗ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field and Equipment Blanks (Items 18 and 19)
- ⊗ Field Duplicate (Items 20 and 21)
- ○ Laboratory Duplicates (Item 22)
- ⊗ Data Relationships (Item 23)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, February 2021.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

Qualifier	Definition
J	Estimated concentration
J+	The result is an estimated concentration, but may be biased high
UJ	Estimated reporting limit
U	Evaluated to be undetected at the reporting limit
JB	Estimated concentration due to blank contamination
R	Rejected, data not usable

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 246 data points. The data completeness calculation does not include any submitted blank sample results. Three data points were rejected. The data completeness measure for this data package is calculated to be 98.78% and is acceptable.

VALIDATION CRITERIA CHECKLIST	
1. Was the report free of non-conformances identified by the laboratory?	Yes
Comments: The laboratory did not identify non-conformances regarding the analytical data.	
2. Were the data free of data qualification flags and/or notes used by the laboratory? If no, define.	No
Comments: The laboratory used the following data qualification flags with this data set. D – Sample diluted due to matrix J – Analyte detected below quantitation limits S – % Recovery outside of range due to dilution or matrix * – Value exceeds Maximum Contaminant Level	
3. Were sample CoC forms and custody procedures complete?	Yes
Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times.	
4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable?	Yes
Comments: The detection limits appeared to be acceptable. The following dilutions were applied. Method 200.7: Dilutions of 5 and 10 times were applied for the metals analyses of samples OW-59 and DUP-09-22-21. A dilution of 10 times was applied for the total iron analysis of sample MKTF-09-22-21. Method 200.8: Dilutions of 5 times were applied for the total metal analyses of samples OW-59 and DUP-09-22-21. Method 300.0: Dilutions of 5 to 200 times were applied for the anions analyses of the samples.	
5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC?	Yes
Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC.	
6. Were samples received in good condition within method-specified requirements?	No
Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of 4°C ± 2°C at 4.2°C and 6.1°C as noted on the *Sample Log-in Check List*. The cooler temperature above 6°C was judged as acceptable since the samples were analyzed within method holding times.	
7. Were samples extracted/digested and analyzed within method-specified or technical holding times?	Yes
Comments: The samples were extracted/digested and analyzed within method-specific holding times.	
8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil.	Yes
Comments: The results were reported in concentration units of micrograms per liter (µg/L) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.	
9. Did the laboratory provide any specific initial and/or continuing calibration results?	No
Comments: Initial and continuing calibration data were not included as part of this data set.	
10. If initial and/or continuing calibration results were provided, were the results within acceptable limits?	N/A
Comments: Initial and continuing calibration data were not included as part of this data set.	

VALIDATION CRITERIA CHECKLIST

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exception.

Method 200.8: **Total copper was detected in the method blank for batch 62798 at a concentration of 0.00046 mg/L. Copper was detected in the associated samples at levels greater than the blank detection but less than 10 times the blank concentration and the results were qualified as JB.** Total copper non-detections in the associated samples did not require qualification.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batch. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

Method	Analytes	Batch	MS Sample Source
200.7	Total Metals	62798	EB-09-22-21
200.7	Dissolved Metals	C81654	EB-09-22-21
200.8	Total Metals	62798	Not Prepared
200.8	Dissolved Metals	C81765	Not Prepared
200.8	Dissolved Metals	D81765	Not Prepared
200.8	Dissolved Metals	B81815	Not Prepared
245.1	Mercury	63015	Not Prepared
300.0	Anions	R81536	EB-09-22-21
300.0	Chloride and Sulfate	R81637	Not Prepared
8015D	TPH DRO and MRO	62819	Not Prepared
8015D	TPH DRO and MRO	62868	Not Prepared
8260B	VOC	R81622	STP-1-NW
8270C	SVOC	62838	Not Prepared
8270C SIM	SVOC	62813	Not Prepared
8015D	GRO	G81622	OW-59

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? No

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation and laboratory QC limits, with the following exception.

Method 8260B: **The MS and MSD recoveries for benzene from batch R81622 were outside laboratory QC limits of 70-130% at 133% and 130%, respectively. Benzene was detected in associated sample MKTF-09-22-21 and the result was qualified as J+ to indicate an estimated concentration that may be biased high.**

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exception.

Method 200.7: **The low level LCS (LLLCS) recovery for total barium from batch 62798 was outside laboratory QC limits of 50-150% at 183%. Barium was detected in associated samples in this batch and the results were qualified as J+ due to evidence of potential high bias.** Qualification was not required for sample EB-09-22-21 as barium was not detected in this sample.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the exceptions listed in the following table.

Method	Surrogate	Sample	Surrogate Recovery	QC Limits
8270C	**2-Fluorophenol**	**STP-1-NW**	**2.30%**	**15-87%**
8270C	**Phenol-d_5**	**STP-1-NW**	**11.2%**	**15-67.5%**
8270C	**2,4,6-Tribromophenol**	**STP-1-NW**	**3.50%**	**15-122%**
8270C	**2-Fluorophenol**	**OW-59**	**0.842%**	**15-87%**
8270C	**Phenol-d_5**	**OW-59**	**1.92%**	**15-67.5%**
8270C	**2,4,6-Tribromophenol**	**OW-59**	**2.74%**	**15-122%**
8270C SIM	Nitrobenzene-d_5	OW-59	154%	21.9-89.8%
8270C SIM	2-Fluorobiphenyl	OW-59	120%	15-84.5%
8270C SIM	4-Terphenyl-d_{14}	OW-59	254%	73.1-152%
8270C	**2-Fluorophenol**	**DUP-09-22-21**	**1.54%**	**15-87%**
8270C	**Phenol-d_5**	**DUP-09-22-21**	**6.08%**	**15-67.5%**
8270C	**2,4,6-Tribromophenol**	**DUP-09-22-21**	**3.21%**	**15-122%**

The analyte associated with the non-compliant Method 8270C surrogates, phenol, was not detected in samples in samples STP-1-NW, OW-59, and DUP-09-22-21, and the results were qualified as R due to evidence of extreme low bias (recoveries less than 10%). Qualification was not required for analytes not associated with the non-compliant surrogates.

Qualification was not required for the Method 8270C SIM surrogates based on the evidence of potential high bias as the associated analytes were not detected in sample OW-59.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One field blank sample, FB-09-22-21, and one equipment blank sample, EB-09-22-21, were collected as part of this sample set.

VALIDATION CRITERIA CHECKLIST

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were reported as not detected in the trip, field, and equipment blanks, with the exceptions listed in the following table.

Blank Sample ID	Method	Analyte	Concentration
EB-09-22-21	8260B	Acetone	2.7 µg/L
EB-09-22-21	**300.0**	**Nitrate**	**0.07 mg/L**
EB-09-22-21	**200.7**	**Zinc, Dissolved**	**0.009 mg/L**
FB-09-22-21	**8260B**	**Acetone**	**4.6 µg/L**

Detections of the identified analytes in the associated samples that were less than the reporting limits were qualified as U. Dissolved zinc was detected in sample STP-1-NW at a concentration greater than the blank detection but less than 10 times the blank concentration and the result was qualified as JB.

Non-detections of the identified analytes in the associated samples and results greater than 10 times the blank detections did not require qualification.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP-09-22-21 was collected as a field duplicate of sample OW-59.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exceptions.

The RPD values for total barium and iron greatly exceeded the data validation QC limit for samples OW-59 and DUP-09-22-21 at 149.2% and 158.2%, respectively. Total barium and iron were qualified as J and UJ for the associated samples due to evidence of extreme poor precision (RPD greater than 100%).

The RPD values for dissolved iron, total manganese, and total copper exceeded the data validation QC limit of 30%, which was evidence of poor precision. Dissolved iron, total manganese, and total copper were qualified as J for samples OW-59 and DUP-09-22-21 due to evidence of poor precision.

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? N/A

Comments: Laboratory duplicate samples were not prepared/reported for this sample set.

VALIDATION CRITERIA CHECKLIST

23. Were the following data relationships realistic and acceptable?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270), and the results were in agreement? Yes

Comments: Target analytes were not reported by more than one method in this data set, with the following exception.

Target analyte 1,4-dichlorobenzene was reported by both Method 8260B and Method 8270C. This analyte was reported as not detected in the project samples by both methods.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The total metals concentrations were greater than or equal to the dissolved fractions, with the following exceptions.

Sample ID	Analyte	Total Result	Dissolved Result	Reporting Limit	Units	RPD
STP-1-NW	Arsenic	0.0025	0.0027	0.0010	mg/L	7.7%
DUP-09-22-21	Arsenic	0.0043	0.0045	0.0010	mg/L	4.5%
STP-1-NW	Selenium	0.0063	0.0081	0.0010	mg/L	25.0%
DUP-09-22-21	**Selenium**	**ND**	**0.0027**	**0.0010**	**mg/L**	**-----**
EB-09-22-21	Zinc	ND	0.009	0.010	mg/L	----- ♦
MKTF-09-22-21	Zinc	0.0069	0.0080	0.010	mg/L	14.8% ♦
STP-1-NW	Zinc	ND	0.013	0.010	mg/L	----- ♦

♦ = *Both of the detections were less than 2 times the applicable reporting limits and qualification of data was not required.*

The analytical results greater than 2 times the applicable RLs for total and dissolved metals fractions were within the RPD limit of 30% indicating that the results were comparable, and qualification of the data was not required.

An RPD value could not be calculated for total and dissolved selenium because the total fraction was not detected in sample DUP-09-22-21. As the detection of dissolved selenium was greater than two times the reporting limits in the identified sample, the dissolved and total selenium results were qualified as J and UJ, respectively.

FIELD DUPLICATE SUMMARY

Client Sample ID: OW-59 Field Duplicate Sample ID: DUP-09-22-21				
Analyte	**Method**	**Laboratory Result**	**Duplicate Result**	**Relative Percent Difference (RPD)**
Acetone	8260B	2.9 µg/L	3.3 µg/L	12.9% +/-RL
MTBE	8260B	15 µg/L	15 µg/L	0.0%
TPH DRO	8015D	0.36 mg/L	0.32 mg/L	11.8%
TPH GRO	8015D	2.7 mg/L	2.7 mg/L	0.0%
Barium, Dissolved	200.7	0.011 mg/L	0.011 mg/L	0.0% +/-RL
Barium, Total	**200.7**	**0.11 mg/L**	**0.016 mg/L**	**149.2%**
Iron, Dissolved	**200.7**	**0.046 mg/L**	**0.016 mg/L**	**96.8%**
Iron, Total	**200.7**	**3.6 mg/L**	**0.42 mg/L**	**158.2%**
Manganese, Dissolved	200.7	0.045 mg/L	0.045 mg/L	0.0%
Manganese, Total	**200.7**	**0.14 mg/L**	**0.054 mg/L**	**88.7%**
Zinc, Total	200.7	0.0072 mg/L	ND (0.050 mg/L)	DL
Arsenic, Dissolved	200.8	0.0040 mg/L	0.0045 mg/L	11.8% +/-RL
Arsenic, Total	200.8	0.0054 mg/L	0.0043 mg/L	22.7% +/-RL
Copper, Dissolved	200.8	ND (0.0050 mg/L)	0.0011 mg/L	DL
Copper, Total	**200.8**	**0.0033 mg/L**	**0.0012 mg/L**	**93.3%**
Lead, Total	200.8	0.0021 mg/L	ND (0.0025 mg/L)	DL
Selenium, Dissolved	200.8	0.0024 mg/L	0.0027 mg/L	11.8% +/-RL
Selenium, Total	200.8	0.0028 mg/L	ND (0.0050 mg/L)	DL
Chloride	300.0	2,400 mg/L	2,400 mg/L	0.0%
Nitrogen, Nitrate	300.0	0.20 mg/L	ND (0.50) mg/L	DL
Sulfate	300.0	2,500 mg/L	2,500 mg/L	0.0%

Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

The RPD values for total barium and iron greatly exceeded the data validation QC limit and the results were qualified as J and UJ for the associated samples due to evidence of extremely poor precision.

The RPD values for dissolved iron, total manganese, and total copper exceeded the data validation QC limit and was qualified as J for samples OW-59 and DUP-09-22-21 due to evidence of poor precision.

DATA QUALIFICATION SUMMARY

Abbreviation	Reason
MBD	Method blank detection
HR-MS	The MS and/or MSD percent recovery was greater than the upper acceptable limit indicating possible matrix interference.
HR-LCS	The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias.
LR-SUR	The surrogate percent recovery was less than the lower acceptable limit indicating a possible low bias.
FBD	Field blank detection
EBD	Equipment blank detection
ERPD-FD	High field duplicate RPD.
DIS-TOT	Dissolved metals concentration was greater than the associated total metals result
MDLRL	Flagged by the laboratory: The result was greater than the MDL but less than the RL.

Tier II Data Validation Report Summary

Client: Marathon Oil	Laboratory: Hall Environmental Analysis Laboratory
Project Name: Western Refining Southwest, Quarterly GW	Sample Matrix: Groundwater
Project Number: 697-080-002 Task: 0006	Sample Start Date: 12/16/2021
Date Validated: 02/07/2022	Sample End Date: 12/16/2021

Parameters Included:

- Volatile Organic Compounds (VOC) by Environmental Protection Agency (EPA) Test Methods for Evaluating Solid Waste (SW-846) Method 8260B
- 1,2-Dibromoethane (EDB) by EPA Method 504.1
- Semivolatile Organic Compounds (SVOC) by SW-846 Methods 8270C and 8270C with Selective Ion Monitoring (SIM)
- Total Petroleum Hydrocarbons (TPH) Gasoline Range Organics (GRO) by SW-846 Method 8015D
- TPH Diesel Range Organics (DRO) and Motor Oil Range Organics (MRO) by SW-846 Method 8015D Modified
- Total and Dissolved Metals by EPA Methods 200.7 and 200.8
- Total and Dissolved Mercury by EPA Method 245.1
- Anions by EPA Method 300.0
- Total Cyanide by EPA Method 335.4

Laboratory Project ID: 2112A87

Data Validator: Daran O'Hollearn, Lead Project Scientist

Reviewer: Mike Phillips, Senior Chemist

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Anatek Labs of Moscow, Idaho evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Equipment blanks

Tier II Data Validation Report Summary

- Field blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

Client Sample ID	Laboratory Sample Number
MKTF-24	2112A87-001
MKTF-2R	2112A87-002
MKTF-31	2112A87-003
MKTF-11	2112A87-004
MKTF-10	2112A87-005
PW-3	2112A87-006
DUP 12/16/2021	2112A87-007
EB 12/16/2021	2112A87-008
FB 12/16/2021	2112A87-009

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- ○ Initial and Continuing Calibrations (Items 9 and 10)
- ✓ Laboratory Blanks (Items 11 and 12)
- ⊗ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ✓ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Equipment and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ○ Laboratory Duplicates (Item 22)
- ⊗ Data Relationships (Item 23)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, February 2021.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

Qualifier	Definition
J	Estimated concentration
J+	The result is an estimated concentration, but may be biased high
U	Evaluated to be undetected at the reporting limit
JB	Estimated concentration due to blank contamination

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 612 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

Method 8270: Pyridine is reported with an "E" flag. The "E" flag is used to represent an estimated value. Pyridine was not detected in the sample, but the calibration curve for this compound did not meet the method requirements.

"S" flags denote that the sample surrogate or spike result is outside of the acceptable limits due to sample dilution or matrix interferences.

2. Were the data free of data qualification flags and/or notes used by the laboratory? If no, define. No

Comments: The laboratory used the following data qualification flags with this data set.

D – Sample Diluted Due to Matrix.

E – Estimated value. *This laboratory flag was applied only to QC sample results in the laboratory report, and qualification of sample data was not required.*

J – Analyte detected below quantitation limits.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds Maximum Contaminant Level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

Method	Sample(s)	Analyte(s)	Dilution Factor
200.7	MKTF-24. MKTF-11, MKTF-10	Select Dissolved and Total Metals	5
200.8	MKTF-2R, MKTF-31, MKTF-11	Select Dissolved and Total Metals	5
300.0	MKTF-11, MKTF-10	Select Anions	5
504.1	MKTF-2R	1,2-Dibromoethane	5
8015D	MKTF-31	GRO	5
8260B	MKTF-31	VOCs	5
200.7	MKTF-24	Dissolved Manganese	10
200.7	MKTF-11	Total Iron, Total Manganese	10
8015D	MKTF-24, MKTF-11, MKTF-10	GRO	10
8260B	Multiple Samples	Select VOCs	10
8270C	Multiple Samples	Select SVOCs	10
200.7	MKTF-10	Select Dissolved and Total Metals	20
300.0	MKTF-24, MKTF-2R, MKTF-31	Select Anions	20
300.0	MKTF-31	Chloride	50
300.0	MKTF-24, MKTF-10	Chloride	100
8260B	MKTF-24, MKTF-11, MKTF-10	Select VOCs	100
300.0	MKTF-2R, MKTF-11	Chloride	200

VALIDATION CRITERIA CHECKLIST

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? Yes

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC.

6. Were samples received in good condition within method-specified requirements? No

Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of 4°C ± 2°C between 4.1°C and 8.1°C as noted on the CoC and Sample Log-in Check List. Samples transferred to Anatek Labs of Moscow, Idaho were received in good condition with the cooler temperature within the recommended range at 2.0°C as noted on the Sample Receipt and Preservation Form.

The cooler temperature above 6°C was evaluated to be acceptable since the samples were received at the laboratory on the same day (within 24 hours) of the last sample collection time, and temperature equilibrium had not been established.

7. Were samples extracted/digested and analyzed within method-specified or technical holding times? Yes

Comments: The samples were extracted/digested and analyzed within method-specific holding times.

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. Yes

Comments: The results were reported in concentration units of micrograms per liter (µg/L) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.

9. Did the laboratory provide any specific initial and/or continuing calibration results? No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks? Yes

Comments: Target analytes were reported as not detected in the laboratory blanks.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

Method	Analytes	Batch	MS Sample Source
200.7	Total Metals	64647	Not Prepared
200.7	Total Metals	64648	MKTF-10
200.7	Dissolved Metals	B84630	EB 12/16/2021
200.8	Total Metals	64647	Not Prepared
200.8	Total Metals	64648	MKTF-11

8260B	VOCs	R84851	Not Prepared
8270C	SVOCs	64594	Not Prepared
8270C	SVOCs	64659	Not Prepared
8270 SIM	SVOCs	64684	Not Prepared

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? No

Comments: The percent recoveries and RPDs for MS/MSDs prepared from project samples were within data validation and laboratory QC limits or were not applicable because the unspiked amount was more than four times the spike added, with the following exception.

The MS and MSD percent recoveries for GRO in Method 8015D batch G84721 were outside the QC limits of 70-130% at 144% and 131%, respectively. GRO detections in the associated samples were qualified as J+ to indicate estimated concentrations. Non-detections in the associated samples did not require qualification due to this non-conformance.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exception.

The LCS recovery for total copper in Method 200.7 batch 64647 was outside the data validation acceptance limits of 70-130% at 139% indicating a potential high bias. Total copper was detected in the associated samples, and these results were qualified with J+ flags.

VALIDATION CRITERIA CHECKLIST

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

Since Method 8270C and 8270 SIM surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the samples MKTF-24 and MKTF-10, and qualification of sample data was not required.

The SVOC results for samples MKTF-10 and MKTF-11 were not qualified based on the surrogate non-conformances in the Method 8270 SIM analyses since the applied dilutions of 10 times for both of these samples resulted in surrogate concentrations below routinely calibrated levels, and those results were deemed unreliable and possibly inaccurate.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One field blank sample, FB 12/16/2021, and one equipment blank sample, EB 12/16/2021, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were reported as not detected in the trip, field, and equipment blanks, with the exceptions listed in the following table.

Blank Sample ID	Method	Analyte	Concentration
FB 12/16/2021	**8260B**	**Acetone**	**4.2 µg/L**
EB 12/16/2021	**200.7**	**Dissolved Zinc**	**0.024 mg/L**
EB 12/16/2021	**300.0**	**Nitrate**	**0.031 mg/L**
EB 12/16/2021	**8260B**	**1,2,4-Trimethylbenzene**	**0.12 µg/L**
EB 12/16/2021	8260B	Acetone	3.9 µg/L

Detections of the identified analytes in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of the identified analytes in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP 12/16/2021 was collected as a field duplicate of sample PW-3.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exceptions.

The RPD values for total iron, dissolved zinc, total zinc, and total copper exceeded the data validation limit of 30% at 73.4%, 82.4%, 79.1%, and 100.0%, respectively, which was evidence of poor precision. These analyte results were qualified as J for samples PW-3 and DUP 12/16/2021.

VALIDATION CRITERIA CHECKLIST

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? N/A

Comments: Laboratory duplicate samples were not prepared for this sample set.

23. Were the following data relationships realistic and acceptable?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270), and the results were in agreement? No

Comments: Target analytes were not reported by more than one method in this data set, with the following exceptions.

Target analytes 1,4-dichlorobenzene, 1-methylnaphthalene, 2-methylnaphthalene, and naphthalene were reported by both Method 8260B and Method 8270C. These analytes were reported as not detected by both methods, or one or both results were within 5 times the applicable reporting limit, with the following exception.

The naphthalene results for sample MKTF-10 were detected by Method 8260B and 8270C at more than 5 times the applicable reporting limits. The difference was not within the variability of the analytical methods, with an RPD% of 42.9%. Given the differences between the findings, the results were assigned J qualifiers.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The total metals concentrations were greater than or equal to the dissolved fractions, with the following exceptions.

Sample ID	Analyte	Total Result	Dissolved Result	Reporting Limit	Units	RPD
MKTF-24	Mercury	ND	0.00015	0.0002	mg/L	----- ♦
MKTF-10	Uranium	0.00043	0.00044	0.0005	mg/L	2.3% ♦
MKTF-24	Zinc	ND	0.011	0.010	mg/L	----- ♦
MKTF-2R	Zinc	0.0088	0.017	0.010	mg/L	63.6% ♦
MKTF-31	Zinc	ND	0.0080	0.010	mg/L	----- ♦
MKTF-11	Zinc	ND	0.010	0.010	mg/L	----- ♦
MKTF-10	Zinc	0.0071	0.010	0.010	mg/L	33.9% ♦
PW-3	Zinc	0.0091	0.015	0.010	mg/L	49.0% ♦
DUP 12/16/2021	Zinc	0.021	0.036	0.010	mg/L	52.6% ♦
EB 12/16/2021	Zinc	ND	0.024	0.010	mg/L	----- ♦

----- *RPD could not be calculated.*

♦ *= One or both of the detections were less than 2 times the applicable reporting limits and qualification of data was not required.*

The differences for the corresponding analytical results were within five times the applicable reporting limits, and validation action was not required.

FIELD DUPLICATE SUMMARY

Client Sample ID: PW-3 Field Duplicate Sample ID: DUP 12/16/2021				
Analyte	**Method**	**Laboratory Result**	**Duplicate Result**	**Relative Percent Difference (RPD)**
Barium, Dissolved	E 200.7	0.012 mg/L	0.012 mg/L	0.0%

Selenium, Total	E200.8	0.00096 mg/L	0.00092 mg/L	4.3% +/-RL
Uranium, Dissolved	E200.8	0.0014 mg/L	0.0014 mg/L	0.0%
Uranium, Total	E200.8	0.0015 mg/L	0.0015 mg/L	0.0%
Mercury, Total	E245.1	0.00016 mg/L	ND (0.00020 mg/L)	DL
TPH GRO	SW8015	0.014 mg/L	ND (0.050 mg/L)	DL
1,2,4-Trimethylbenzene	SW8260B	0.33 µg/L	ND (1.0 µg/L)	DL
Benzene	SW8260B	0.34 µg/L	ND (1.0 µg/L)	DL
Ethylbenzene	SW8260B	0.23 µg/L	ND (1.0 µg/L)	DL
Xylenes, Total	SW8260B	0.94 µg/L	ND (1.5 µg/L)	DL

Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

The RPD values for total iron, dissolved zinc, total zinc, and total copper exceeded the data validation limit of 30% at 73.4%, 82.4%, 79.1%, and 100.0%, respectively, which was evidence of poor precision. These analyte results were qualified as J for samples PW-3 and DUP 12/16/2021.

DATA QUALIFICATION SUMMARY

Abbreviation	Reason
DATA-COMP	Analytical results for analyte by different methods did not meet comparability limits.
EBD	Equipment blank detection
ERPD-FD	High field duplicate RPD.
FBD	Field blank detection
HR-LCS	The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias.
HR-MS	The MS and/or MSD percent recovery was greater than the upper acceptable limit indicating possible matrix interference.
MDLRL	Flagged by the laboratory: The result was greater than the MDL but less than the RL.

Tier II Data Validation Report Summary

Client: Marathon Oil	Laboratory: Hall Environmental Analysis Laboratory
Project Name: Western Refining Southwest, Quarterly GW	Sample Matrix: Groundwater
Project Number: 697-080-002 Task: 0006	Sample Start Date: 12/17/2021
Date Validated: 02/10/2022	Sample End Date: 12/17/2021
Parameters Included: ▪ Volatile Organic Compounds (VOC) by Environmental Protection Agency (EPA) Test Methods for Evaluating Solid Waste (SW-846) Method 8260B ▪ 1,2-Dibromoethane (EDB) by EPA Method 504.1 ▪ Semivolatile Organic Compounds (SVOC) by SW-846 Methods 8270C and 8270C with Selective Ion Monitoring (SIM) ▪ Total Petroleum Hydrocarbons (TPH) Gasoline Range Organics (GRO) by SW-846 Method 8015D ▪ TPH Diesel Range Organics (DRO) and Motor Oil Range Organics (MRO) by SW-846 Method 8015D Modified ▪ Total and Dissolved Metals by EPA Methods 200.7 and 200.8 ▪ Total and Dissolved Mercury by EPA Method 245.1 ▪ Anions by EPA Method 300.0 ▪ Per- and Polyfluorinated Alkyl Substances (PFAS) by Liquid Chromatography with Tandem Mass Spectrometry (LC-MS/MS) and Isotope Dilution (ID)	
Laboratory Project ID: 2112B70	
Data Validator: Daran O'Hollearn, Lead Project Scientist	
Reviewer: Mike Phillips, Senior Chemist	

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Vista Analytical Laboratory of El Dorado Hills, California, evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Equipment blanks
- Field blanks
- Trip blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

Client Sample ID	Laboratory Sample Number
OW-63	2112B70-001
MKTF-25	2112B70-002
MKTF-40	2112B70-003
West LDU	2112B70-004
East LDU	2112B70-005
DUP 12/17/2021	2112B70-006
EB 12/17/2021	2112B70-007
FB PFAS	2112B70-009
Trip Blank	2112B70-010

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ⊗ Holding Times and Preservation (Items 6 and 7)
- ⊗ Initial and Continuing Calibrations (Items 9 and 10)
- ✓ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ✓ LCS/LCSD (Items 15 and 16)
- ✓ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ○ Laboratory Duplicates (Item 22)
- ✓ Data Relationships (Item 23)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537, United States Environmental Protection Agency (USEPA), document number EPA 910-R-18-001, November 2018.
- Data Validation Guidelines Module 3: Data Validation Procedure for Per- and Polyfluoroalkyl Substances Analysis by QSM Table B-15, United States Department of Defense, Environmental Data Quality Workgroup, May 1, 2020.
- General Data Validation Guidelines, United States Department of Defense, Environmental Data Quality Workgroup, November 4, 2019.

Tier II Data Validation Report Summary

- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, February 2021.

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

Qualifier	Definition
J	Estimated concentration
UJ	Estimated reporting limit
U	Evaluated to be undetected at the reporting limit
JB	Estimated concentration due to blank contamination
R	Rejected, data not usable

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 447 data points. The data completeness calculation does not include any submitted blank sample results. Three data points were rejected. The data completeness measure for this data package is calculated to be 99.33% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

Method 8270: Pyridine is reported with an "E" flag. The "E" flag is used to represent an estimated value. Pyridine was not detected in the sample, but the calibration curve for this compound did not meet the method requirements.

“S" flags denote that the sample surrogate or spike result is outside of the acceptable limits due to sample dilution or matrix interferences.

2. Were the data free of data qualification flags and/or notes used by the laboratory? If no, define. No

Comments: The laboratory used the following data qualification flags with this data set.

E – Estimated value.

J – Analyte detected below quantitation limits.

S – % Recovery outside of range due to dilution or matrix.

* – Value exceeds Maximum Contaminant Level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

Method	Sample(s)	Analyte(s)	Dilution Factor
8015D	West LDU	GRO	2
8260B	West LDU	VOCs	2
200.7	OW-63, MKTF-25	Select Total Metals	5
200.8	Multiple Samples	Select Dissolved and Total Metals	5
300.0	OW-63, MKTF-25, MKTF-40	Select Anions	5
200.7	OW-63, MKTF-25, East LDU	Select Dissolved and Total Metals	10
200.8	MKTF-40	Total Copper	10
8015D	MKTF-25, East LDU	GRO	10
8260B	MKTF-25, East LDU	VOCs	10
8270C	OW-63	1-Methylnaphthalene, 2-Methylnaphthalene	10
8270C	MKTF-25	1,4-Dioxane	10
200.7	West LDU, East LDU, DUP 12/17/2021	Dissolved and Total Manganese	20
200.8	West LDU, East LDU, DUP 12/17/2021	Select Dissolved and Total Metals	20
300.0	MKTF-40	Nitrate+Nitrite as N, Sulfate	20
8270C	OW-63	Naphthalene	20
300.0	MKTF-25	Chloride	50
8015D	OW-63	GRO	50
8260B	OW-63	VOCs	50
200.7	West LDU, DUP 12/17/2021	Dissolved and Total Iron	500

VALIDATION CRITERIA CHECKLIST

Method	Sample(s)	Analyte(s)	Dilution Factor
300.0	MKTF-40	Chloride	500
8260B	OW-63	Benzene	500
200.7	East LDU	Dissolved Iron	1,000
200.7	East LDU	Total Iron	2,000

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? Yes

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC.

6. Were samples received in good condition within method-specified requirements? No

Comments: Samples were received on ice, in good condition, and with the cooler temperatures within the recommended temperature range of 4°C ± 2°C between 3.3°C and 5.8°C as noted on the CoC and Sample Log-in Check List. Samples transferred to Vista Analytical Laboratories of El Dorado Hills, California were received in good condition with the cooler temperature outside the recommended range at 0.4°C as noted on the Sample Log-In Checklist.

The cooler temperature below 2.0°C was judged as acceptable since the laboratory did not report the sample containers as broken or frozen.

7. Were samples extracted/digested and analyzed within method-specified or technical holding times? No

Comments: The samples were extracted/digested and analyzed within method-specific holding times, with the following exceptions.

Method 300.0: Samples OW-63, MKTF-25, and MKTF-40 were analyzed for nitrate and nitrite outside the defined holding time of 48 hours by approximately 1 day and 17 days. Nitrate and nitrate were not detected in samples OW-63, MKTF-25, and MKTF-40. These results were assigned R to indicate that the data were rejected due to the holding time being exceeded.

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. Yes

Comments: The results were reported in concentration units of nanograms per liter (ng/L), micrograms per liter (µg/L), and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.

9. Did the laboratory provide any specific initial and/or continuing calibration results? No

Comments: Detailed initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? No

Comments: Detailed initial and continuing calibration data were not included as part of this data set.

For sample MKTF-40, the laboratory applied the E qualifier to the pyridine result in Method 8270C indicating that this compound was recovered outside the laboratory acceptance limits for the continuing calibration. Pyridine was not detected in sample MKTF-40, and this result was qualified with a UJ flag.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

12. Were target analytes reported as not detected in the laboratory blanks? Yes

Comments: Target analytes were reported as not detected in the laboratory blanks.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

Method	Analytes	Batch	MS Sample Source
200.7	Total Metals	64661	Not Prepared
200.7	Dissolved Metals	A84736	EB 12/17/2021
200.8	Total Metals	64661	OW-3, MKTF-25
200.8	Dissolved Metals	A84953	Not Prepared
200.8	Dissolved Uranium	A84995	Not Prepared
200.8	Dissolved Metals	B84856	Not Prepared
200.8	Dissolved Metals	B84886	Not Prepared
245.1	Total Mercury	64935	Not Prepared
245.1	Dissolved and Total Mercury	64979	Not Prepared
300.0	Anions	A84688	Not Prepared
300.0	Chloride	R84924	Not Prepared
300.0	Nitrate+Nitrite as N	R84955	Not Prepared
504.1	EDB	64767	Not Prepared
PFAS Method	PFAS	B1L0170	Not Prepared
8015D	TPH DRO and MRO	64698	Not Prepared
8015D	GRO	G84721	Not Prepared
8015D	GRO	G84851	Not Prepared
8260B	VOCs	R84721	Not Prepared
8260B	VOCs	R84759	West LDU
8260B	VOCs	R84851	Not Prepared
8270C	SVOCs	64659	Not Prepared
8270 SIM	SVOCs	64693	Not Prepared

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The percent recoveries and RPDs for MS/MSDs prepared from project samples were within data validation and laboratory QC limits.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? Yes

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

Since Method 8270 SIM surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the samples OW-63 and MKTF-25, and qualification of sample data was not required.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB PFAS, and one equipment blank sample, EB 12/17/2021, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were reported as not detected in the trip, field, and equipment blanks, with the exceptions listed in the following table.

Blank Sample ID	Method	Analyte	Concentration
Trip Blank	8260B	Chloromethane	0.43 µg/L
EB 12/17/2021	**200.7**	**Dissolved Zinc**	**0.012 mg/L**
EB 12/17/2021	**8015D**	**DRO**	**0.018 mg/L**
EB 12/17/2021	**8260B**	**Acetone**	**4.1 µg/L**

Detections of the identified analytes in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of the identified analytes in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP 12/17/2021 was collected as a field duplicate of sample West LDU.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exception.

The RPD value for total chromium exceeded the data validation limit of 30% at 59.7%, which was evidence of poor precision. The total chromium results were qualified as J for samples West LDU and DUP 12/17/2021.

VALIDATION CRITERIA CHECKLIST

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? N/A

Comments: Laboratory duplicate samples were not prepared for this sample set.

23. Were the following data relationships realistic and acceptable?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270), and the results were in agreement? Yes

Comments: Target analytes were not reported by more than one method in this data set, with the following exceptions.

Target analytes 1,4-dichlorobenzene, 1-methylnaphthalene, 2-methylnaphthalene, and naphthalene were reported by both Method 8260B and Method 8270C. These analytes were reported as not detected by both methods, or one or both results were within 5 times the applicable reporting limit. Qualification of data was not required.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The total metals concentrations were greater than or equal to the dissolved fractions, with the following exceptions.

Sample ID	Analyte	Total Result	Dissolved Result	Reporting Limit	Units	RPD
East LDU	Cadmium	0.051	0.052	0.0020 / 0.0020	mg/L	1.9%
MKTF-40	Copper	ND	0.00070	0.010 / 0.0010	mg/L	----- ♦
East LDU	Iron	970	990	100 / 20	mg/L	2.0%
OW-63	Uranium	ND	0.00031	0.00050 / 0.00050	mg/L	----- ♦
West LDU	Uranium	ND	0.00035	0.00050 / 0.0025	mg/L	----- ♦
OW-63	Zinc	ND	0.020	0.010 / 0.010	mg/L	----- ♦
MKTF-25	Zinc	ND	0.0075	0.010 / 0.010	mg/L	----- ♦
MKTF-40	Zinc	ND	0.0074	0.010 / 0.010	mg/L	----- ♦
West LDU	Zinc	ND	0.013	0.010 / 0.010	mg/L	----- ♦
DUP 12/17/2021	Zinc	ND	0.0055	0.010 / 0.010	mg/L	----- ♦
EB 12/17/2021	Zinc	ND	0.012	0.010 / 0.010	mg/L	----- ♦

----- *RPD could not be calculated.*

♦ *= One or both of the detections were less than 2 times the applicable reporting limits, and qualification of data was not required.*

The differences for the corresponding analytical results were within five times the applicable reporting limits and validation action was not required, or the differences between the results were less than 30% indicating that the data were within the measurement uncertainty for the methods and qualification of results was not required based on the analytical inconsistencies.

FIELD DUPLICATE SUMMARY

Client Sample ID: West LDU Field Duplicate Sample ID: DUP 12/17/2021				
Analyte	**Method**	**Laboratory Result**	**Duplicate Result**	**Relative Percent Difference (RPD)**
Barium, Dissolved	E 200.7	0.074 mg/L	0.074 mg/L	0.0%

Isopropylbenzene	SW8260B	0.89 µg/L	0.88 ug/L	1.1% +/-RL
MTBE	SW8260B	5.2 µg/L	5.2 ug/L	0.0%
Naphthalene	SW8260B	ND (4.0 µg/L)	0.77 µg/L	DL
n-Propylbenzene	SW8260B	0.79 µg/L	0.68 µg/L	15.0% +/-RL
p-Isopropyltoluene	SW8260B	0.50 µg/L	0.42 µg/L	17.4% +/-RL
sec-Butylbenzene	SW8260B	0.47 µg/L	0.34 µg/L	32.1% +/-RL
Toluene	SW8260B	0.65 µg/L	0.66 µg/L	1.5% +/-RL
Xylenes, Total	SW8260B	ND (3.0 µg/L)	0.73 µg/L	DL

Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

The RPD value for total chromium exceeded the data validation limit of 30% at 59.7%, which was evidence of poor precision. The total chromium results were qualified as J for samples West LDU and DUP 12/17/2021.

DATA QUALIFICATION SUMMARY

Abbreviation	Reason
EBD	Equipment blank detection
ERPD-FD	High field duplicate RPD.
HDRRF	The %D between the initial calibration RRF and the opening CCV RRF was outside the acceptable limits.
HT-AN	Sample was analyzed outside of the method holding time.
MDLRL	Flagged by the laboratory: The result was greater than the MDL but less than the RL.

Analyte	Method	Field Sample ID	Lab Sample ID	Result	Limit	Units	Reviewer Qualifier	DV Flag Reasons

Tier II Data Validation Report Summary

Client: Marathon Oil	Laboratory: Hall Environmental Analysis Laboratory
Project Name: Western Refining Southwest, Quarterly GW	Sample Matrix: Groundwater
Project Number: 697-080-002 Task: 0006	Sample Start Date: 12/17/2021
Date Validated: 02/10/2022	Sample End Date: 12/21/2021
Parameters Included: ▪ Volatile Organic Compounds (VOC) by Environmental Protection Agency (EPA) Test Methods for Evaluating Solid Waste (SW-846) Method 8260B ▪ 1,2-Dibromoethane (EDB) by EPA Method 504.1 ▪ Semivolatile Organic Compounds (SVOC) by SW-846 Methods 8270C and 8270C with Selective Ion Monitoring (SIM) ▪ Total Petroleum Hydrocarbons (TPH) Gasoline Range Organics (GRO) by SW-846 Method 8015D ▪ TPH Diesel Range Organics (DRO) and Motor Oil Range Organics (MRO) by SW-846 Method 8015D Modified ▪ Total and Dissolved Metals by EPA Methods 200.7 and 200.8 ▪ Total and Dissolved Mercury by EPA Method 245.1 ▪ Anions by EPA Method 300.0	
Laboratory Project ID: 2112C34	
Data Validator: Daran O'Hollearn, Lead Project Scientist	
Reviewer: Mike Phillips, Senior Chemist	

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

Tier II Data Validation Report Summary

- Equipment blanks
- Field blanks
- Trip blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

Client Sample ID	Laboratory Sample Number
EB-12-21-21	2112C34-001
MKTF-17R	2112C34-002
MKTF-18R	2112C34-003
MKTF-35	2112C34-004
MKTF-38	2112C34-005
FB-12-21-21	2112C34-006
DUP-12-21-21	2112C34-007
FB-12-17-21	2112C34-008
Trip blank	2112C34-009

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- ○ Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ✓ LCS/LCSD (Items 15 and 16)
- ✓ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ✓ Field Duplicates (Items 20 and 21)
- ○ Laboratory Duplicates (Item 22)
- ⊗ Data Relationships (Item 23)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, February 2021.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

Qualifier	Definition
J	Estimated concentration
U	Evaluated to be undetected at the reporting limit
JB	Estimated concentration due to blank contamination

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 507 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

Method 8270: Pyridine is reported with an "E" flag. The "E" flag is used to represent an estimated value. Pyridine was not detected in the sample, but the calibration curve for this compound did not meet the method requirements. *Due to the data reported in this SDG, this comment was mistakenly placed in the narrative.*

"S" flags denote that the sample surrogate or spike result is outside of the acceptable limits due to sample dilution or matrix interferences.

2. Were the data free of data qualification flags and/or notes used by the laboratory? If no, define. No

Comments: The laboratory used the following data qualification flags with this data set.

D – Sample diluted due to matrix.

J – Analyte detected below quantitation limits.

S – % Recovery outside of range due to dilution or matrix.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

Method	Sample(s)	Analyte(s)	Dilution Factor
200.7	Multiple Samples	Select Dissolved and Total Metals	5
200.8	MKTF-38	Total Uranium	5
300.0	Multiple Samples	Select Anions	5
200.7	MKTF-35	Select Dissolved and Total Metals	10
8015D	Multiple Sample	GRO	10
8015D	MKTF-18R	DRO and MRO	10
8260B	Multiple Samples	VOCs	10
8270C	MKTF-17R, MKTF-35, DUP-12-21-21	Select SVOCs	10
300.0	Multiple Samples	Chloride	20
300.0	MKTF-38	Sulfate	20
8270C	MKTF-18R	Select SVOCs	20
300.0	MKTF-35	Chloride	50
8260B	Multiple Samples	Select VOCs	100

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? Yes

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC.

VALIDATION CRITERIA CHECKLIST

6. Were samples received in good condition within method-specified requirements? No

Comments: Samples were received on ice, in good condition, and with the cooler temperatures outside the recommended temperature range of 4°C ± 2°C at 6.5°C, 6.9°C, and 7.0°C as noted on the CoC and Sample Log-in Check List.

The cooler temperatures above 6°C were evaluated to be acceptable since the samples were received at the laboratory on the same day (within 24 hours) of the last sample collection time, and temperature equilibrium had not been established.

7. Were samples extracted/digested and analyzed within method-specified or technical holding times? Yes

Comments: The samples were extracted/digested and analyzed within method-specific holding times.

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. Yes

Comments: The results were reported in concentration units of micrograms per liter (µg/L) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.

9. Did the laboratory provide any specific initial and/or continuing calibration results? No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following, exception.

DRO was detected in the laboratory blank for Method 8015D batch 64709 at a concentration of 0.020 mg/L. Results greater than the blank detection and/or the laboratory reporting limit but less than 10 times the blank concentration were qualified with a JB flag. Detections of DRO in the associated samples greater than ten times the blank concentration did not require qualification.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

Method	Analytes	Batch	MS Sample Source
200.7	Total Metals	64738	Not Prepared
200.7	Dissolved Metals	A84736	Not Prepared
200.8	Total Metals	64738	Not Prepared
200.8	Dissolved Metals	A84886	Not Prepared
245.1	Dissolved and Total Mercury	64998	Not Prepared
245.1	Dissolved and Total Mercury	64979	DUP-12-21-21
300.0	Anions	R84761	EB-12-21-21

VALIDATION CRITERIA CHECKLIST

Method	Analytes	Batch	MS Sample Source
300.0	Chloride	R85016	Not Prepared
504.1	EDB	64768	Not Prepared
8015D	DRO and MRO	64698	Not Prepared
8015D	DRO and MRO	64709	Not Prepared
8015D	GRO	G84831	MKTF-17R
8260B	VOCs	R84831	EB-12-21-21
8260B	VOCs	R84851	Not Prepared
8270 SIM	SVOCs	64693	Not Prepared
8270C	SVOCs	64740	Not Prepared

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The percent recoveries and RPDs for MS/MSDs prepared from project samples were within data validation and laboratory QC limits.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? Yes

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

Since Methods 8270C and 8270 SIM surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the samples MKTF-17R, MKTF-35, and DUP-12-21-21, and qualification of sample data was not required.

The DRO and MRO results for sample MKTF-18R were not qualified based on the surrogate non-conformances in the Method 8015D analysis since the applied dilution of 10 times resulted in a surrogate concentration below routinely calibrated levels, and those results were deemed unreliable and possibly inaccurate.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip blank, two field blank samples, FB-12-17-21 and FB-12-21-21, and one equipment blank sample, EB-12-21-21, were collected as part of this sample set.

VALIDATION CRITERIA CHECKLIST

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were reported as not detected in the trip, field, and equipment blanks, with the exceptions listed in the following table.

Blank Sample ID	Method	Analyte	Concentration
Trip blank	**8260B**	**1,2,4-Trimethylbenzene**	**0.12 µg/L**
FB-12-17-21	8015D	GRO	0.013 mg/L
FB-12-17-21	8260B	1,2,4-Trimethylbenzene	0.20 µg/L
FB-12-17-21	8260B	Acetone	3.20 µg/L
FB-12-21-21	**8260B**	**Acetone**	**3.60 µg/L**
FB-12-17-21	8260B	Toluene	0.62 µg/L
FB-12-17-21	8260B	Total Xylenes	0.43 µg/L
EB-12-21-21	**200.7**	**Dissolved Zinc**	**0.0043 mg/L**
EB-12-21-21	**300.0**	**Nitrate as N**	**0.038 mg/L**
EB-12-21-21	8015D	DRO	0.017 mg/L
EB-12-21-21	8260B	Acetone	3.50 µg/L

Detections of the identified analytes in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of the identified analytes in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

The DRO results for the samples in batch 64709 were previously qualified due to laboratory blank contamination; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP-12-21-2021 was collected as a field duplicate of sample MKTF-17R.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? Yes

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples.

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? N/A

Comments: Laboratory duplicate samples were not prepared for this sample set.

VALIDATION CRITERIA CHECKLIST

23. Were the following data relationships realistic and acceptable?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270), and the results were in agreement? No

Comments: Target analytes were not reported by more than one method in this data set, with the following exceptions.

Target analytes 1,4-dichlorobenzene, 1-methylnaphthalene, 2-methylnaphthalene, and naphthalene were reported by both Method 8260B and Method 8270C. 1,2-Dibromoethane was reported from analyses by both Method 8260B and 504.1. These analytes were reported as not detected by both methods, or one or both results were within 5 times the applicable reporting limit, with the following exceptions.

The 2-methylnaphthalene and naphthalene results in sample MKTF-18R were detected by Method 8260B and 8270C at more than 5 times the applicable reporting limits. The differences were not within the variability of the analytical methods, with RPD% of 46.2% and 57.4%, respectively. Given the differences between the findings, the results were assigned J qualifiers.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The total metals concentrations were greater than or equal to the dissolved fractions, with the following exceptions.

Sample ID	Analyte	Total Result	Dissolved Result	Reporting Limit	Units	RPD
MKTF-18R	Barium	1.5	1.6	0..015 / 0.010	mg/L	6.5%
DUP-12-21-21	Barium	0.34	0.35	0.0030 / 0.0020	mg/L	2.9%
MKTF-35	Iron	6.9	7.1	0.50 / 0.20	mg/L	2.9%
DUP-12-21-21	Manganese	3.4	3.5	0.0010 / 0.0010	mg/L	2.9%
EB-12-21-21	Zinc	ND	0.0043	0.010 / 0.010	mg/L	----- ♦
MKTF-17R	Zinc	ND	0.0078	0.010 / 0.010	mg/L	----- ♦
MKTF-18R	Zinc	ND	0.015	0.010 / 0.010	mg/L	----- ♦
MKTF-35	Zinc	ND	0.075	0.010 / 0.010	mg/L	----- ♦
MKTF-38	Zinc	ND	0.094	0.010 / 0.010	mg/L	----- ♦
DUP-12-21-21	Zinc	ND	0.012	0.010 / 0.010	mg/L	----- ♦

----- *RPD could not be calculated.*

♦ *= One or both of the detections were less than 2 times the applicable reporting limits and qualification of data was not required.*

The differences for the corresponding analytical results were within five times the applicable reporting limits and validation action was not required, or the differences between the results were less than 30% indicating that the data were within the measurement uncertainty for the methods and qualification of results was not required based on the analytical inconsistencies.

FIELD DUPLICATE SUMMARY

Client Sample ID: MKTF-17R Field Duplicate Sample ID: DUP-12-21-21				
Analyte	**Method**	**Laboratory Result**	**Duplicate Result**	**Relative Percent Difference (RPD)**

Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

DATA QUALIFICATION SUMMARY

Abbreviation	Reason
DATA-COMP	Analytical results for analyte by different methods did not meet comparability limits.
EBD	Equipment blank detection
FBD	Field blank detection
MBD	Method blank detection
MDLRL	Flagged by the laboratory: The result was greater than the MDL but less than the RL.
TBD	Trip blank detection

Tier II Data Validation Report Summary

Client: Marathon Oil	Laboratory: Hall Environmental Analysis Laboratory
Project Name: Western Refining Southwest, Quarterly GW	Sample Matrix: Groundwater
Project Number: 697-080-002 Task: 0006	Sample Start Date: 12/22/2021
Date Validated: 02/10/2022	Sample End Date: 12/22/2021
Parameters Included: ▪ Volatile Organic Compounds (VOC) by Environmental Protection Agency (EPA) Test Methods for Evaluating Solid Waste (SW-846) Method 8260B ▪ Semivolatile Organic Compounds (SVOC) by SW-846 Methods 8270C and 8270C with Selective Ion Monitoring (SIM) ▪ Total Petroleum Hydrocarbons (TPH) Gasoline Range Organics (GRO) by SW-846 Method 8015D ▪ TPH Diesel Range Organics (DRO) and Motor Oil Range Organics (MRO) by SW-846 Method 8015D Modified ▪ Total and Dissolved Metals by EPA Methods 200.7 and 200.8 ▪ Total and Dissolved Mercury by EPA Method 245.1 ▪ Anions by EPA Method 300.0	
Laboratory Project ID: 2112D00	
Data Validator: Daran O'Hollearn, Lead Project Scientist	
Reviewer: Mike Phillips, Senior Chemist	

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Equipment blanks
- Field blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Tier II Data Validation Report Summary

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

Client Sample ID	Laboratory Sample Number
EB-12-22-21	2112D00-001
MKTF-04R	2112D00-002
MKTF-01R	2112D00-003
NDD-MW-1	2112D00-004
NDD-MW-2	2112D00-005
FB-12-22-21	2112D00-006
DUP-12-22-21	2112D00-007

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- ○ Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ○ Matrix Spikes (MS) and Matrix Spike Duplicates (MSD) (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field and Equipment Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ○ Laboratory Duplicates (Item 22)
- ⊗ Data Relationships (Item 23)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, February 2021.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

Qualifier	Definition
J	Estimated concentration
J+	The result is an estimated concentration, but may be biased high
JB	Estimated concentration due to blank contamination
U	Evaluated to be undetected at the reporting limit
UJ	Estimated reporting limit

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 451 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

Method 8270: Pyridine is reported with an "E" flag. The "E" flag is used to represent an estimated value. Pyridine was not detected in the sample, but the calibration curve for this compound did not meet the method requirements. *According to the data reported in this SDG, this comment was mistakenly placed in the case narrative.*

"S" flags denote that the sample surrogate or spike result is outside of the acceptable limits due to sample dilution or matrix interferences.

2. Were the data free of data qualification flags and/or notes used by the laboratory? If no, define. No

Comments: The laboratory used the following data qualification flags with this data set.

J – Analyte detected below quantitation limits.

S – % Recovery outside of range due to dilution or matrix.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

Method	Sample(s)	Analyte(s)	Dilution Factor
200.7	MKTF-04R, MKTF-01R, DUP-12-22-21	Select Dissolved and Total Metals	5
200.8	MKTF-01R, NDD-MW-2, DUP-12-22-21	Select Dissolved and Total Metals	5
300.0	Multiple Samples	Select Anions	5
8015D	MKTF-04R, DUP-12-22-21	GRO	5
8260B	MKTF-04R, DUP-12-22-21	VOCs	5
200.7	MKTF-01R	Select Dissolved and Total Metals	10
8015D	MKTF-01R, NDD-MW-2	GRO	10
8260B	MKTF-01R, NDD-MW-2	Select VOCs	10
8270C	MKTF-04R	1,4-Dioxane	10
8270C	MKTF-01R	Naphthalene	10
8270C	DUP-12-22-21	Select SVOCs	10
300.0	MKTF-04R, NDD-MW-1, DUP-12-22-21	Chloride	20
300.0	MKTF-01R, NDD-MW-2	Chloride	100
8260B	MKTF-01R	Benzene	100

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? Yes

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC.

VALIDATION CRITERIA CHECKLIST	
6. Were samples received in good condition within method-specified requirements?	No
Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of 4°C ± 2°C at 1.7°C, 3.0°C, and 8.2°C as noted on the CoC and Sample Log-in Check List. The cooler temperature above 6°C was evaluated to be acceptable since the samples were received at the laboratory on the same day (within 24 hours) of the last sample collection time, and temperature equilibrium had not been established. The cooler temperature below 2.0°C was judged as acceptable since the laboratory did not report the sample containers as broken or frozen.	
7. Were samples extracted/digested and analyzed within method-specified or technical holding times?	Yes
Comments: The samples were extracted/digested and analyzed within method-specific holding times.	
8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil.	Yes
Comments: The results were reported in concentration units of micrograms per liter (µg/L) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.	
9. Did the laboratory provide any specific initial and/or continuing calibration results?	No
Comments: Initial and continuing calibration data were not included as part of this data set.	
10. If initial and/or continuing calibration results were provided, were the results within acceptable limits?	N/A
Comments: Initial and continuing calibration data were not included as part of this data set.	
11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method?	Yes
Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.	
12. Were target analytes reported as not detected in the laboratory blanks?	No
Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exception. **DRO was detected in the laboratory blank for Method 8015D batch 64709 at a concentration of 0.020 mg/L. Sample results detected below the blank concentration and the laboratory reporting limit were qualified with a U flag.** Detections of DRO in the associated samples greater than ten times the blank concentration did not require qualification.	
13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method?	No
Comments: The total number of matrix spike samples prepared was not equal to at least 5% of the total number of samples. Matrix spikes were not prepared for the analyses in this data set.	
14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits?	N/A
Comments: MS/MSD samples were not prepared using project samples as the sample source.	
15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method?	Yes
Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.	

VALIDATION CRITERIA CHECKLIST	
16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits?	No
Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits., with the following exception. **The recovery for dissolved cadmium in Method 200.7 batch A84839 was outside the data validation acceptance limits of 70-130% at 65.9% indicating a potential low bias. Dissolved cadmium was not detected in the associated samples, and these results were qualified with UJ flags.**	
17. Were surrogate recoveries within laboratory QC limits?	No
Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions. **The recoveries of Method 8270 SIM surrogates nitrobenzene-d_5, 2-fluorobiphenyl, and 4-terphenyl-d_{14} for sample NDD-MW-2 were outside the laboratory acceptance ranges of 21.9-89.8%, 15-84.5%, and 73.1-152% at 13.5%, 5.50%, and 11.0%, respectively. The target analytes associated with these surrogates were not detected in sample NDD-MW-2, and the results were assigned UJ qualifiers due to evidence of potential low bias.** **The Method 8270 SIM surrogates nitrobenzene-d_5, 2-fluorobiphenyl, and 4-terphenyl-d_{14} were recovered in sample DUP-12-22-21 above the acceptance limits of 21.9-89.8%, 15-84.5%, and 73.1-152% at 695%, 565%, and 1,020%, respectively. The target analytes associated with these surrogates that were detected in sample DUP-12-22-21were assigned J+ qualifiers due to evidence of potential high bias.** The associated analytes that were not detected in the sample did not require qualification. Since Methods 8270C and 8270 SIM surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the samples MKTF-01R and NDD-MW-2, and qualification of sample data was not required. Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.	
18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit?	Yes
Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One field blank sample, FB-12-22-21, and one equipment blank sample, EB-12-22-21, were collected as part of this sample set.	

VALIDATION CRITERIA CHECKLIST

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were reported as not detected in the trip, field, and equipment blanks, with the exceptions listed in the following table.

Blank Sample ID	Method	Analyte	Concentration
FB-12-22-21	8015D	TPH GRO	0.023 mg/L
FB-12-22-21	**8260B**	**1,1,2-Trichloroethane**	**0.25 µg/L**
FB-12-22-21	**8260B**	**1,2,4-Trimethylbenzene**	**0.42 µg/L**
FB-12-22-21	**8260B**	**1,3,5-Trimethylbenzene**	**0.26 µg/L**
FB-12-22-21	**8260B**	**Acetone**	**4.0 µg/L**
FB-12-22-21	8260B	Benzene	0.24 µg/L
FB-12-22-21	**8260B**	**Toluene**	**0.30 µg/L**
EB-12-22-21	**200.7**	**Dissolved Zinc**	**0.0078 mg/L**
EB-12-22-21	**300.0**	**Nitrate as N**	**0.066 mg/L**
EB-12-21-21	8015D	DRO	0.017 mg/L
EB-12-21-21	8260B	Acetone	3.7 µg/L

Detections of the identified analytes in the associated samples that were less than or equal to the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of the identified analytes in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

The DRO results for the samples in batch 64709 were previously qualified due to laboratory blank contamination; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP-12-22-2021 was collected as a field duplicate of sample MKTF-04R.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exceptions.

The RPD values for total lead and 1,4-dioxane exceeded the data validation limit of 30% at 34.1% and 87.5%, which was evidence of poor precision. The total lead and 1,4-dioxane results were qualified as J for samples MKTF-04R and DUP-12-22-21.

The RPD values for multiple analytes greatly exceeded the data validation limit of 30%. These analyte results were qualified as J for the parent and duplicate samples, MKTF-04R and DUP-12-22-21, as well as the remaining associated samples with detections, based on evidence of extremely poor precision (RPD > 100%). Non-detect results were qualified as UJ in the associated samples.

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? N/A

Comments: Laboratory duplicate samples were not prepared for this sample set.

VALIDATION CRITERIA CHECKLIST

23. Were the following data relationships realistic and acceptable?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270), and the results were in agreement? Yes

Comments: Target analytes were not reported by more than one method in this data set, with the following exceptions.

Target analytes 1,4-dichlorobenzene, 1-methylnaphthalene, 2-methylnaphthalene, and naphthalene were reported by both Method 8260B and Method 8270C. These analytes were reported as not detected by both methods, or one or both results were within 5 times the applicable reporting limit. Qualification of data was not required.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The total metals concentrations were greater than or equal to the dissolved fractions, with the following exceptions.

Sample ID	Analyte	Total Result	Dissolved Result	Reporting Limit	Units	RPD
NDD-MW-1	Barium	0.61	0.62	0..0030 / 0.0020	mg/L	1.6%
NDD-MW-1	Manganese	0.31	0.32	0.0020 / 0.0020	mg/L	3.2%
NDD-MW-2	Selenium	0.0014	0.0015	0.0010 / 0.0010	mg/L	6.9% ♦
MKTF-01R	Uranium	0.0017	0.0020	0.0025 / 0.0050	mg/L	16.2% ♦
NDD-MW-2	Uranium	0.033	0.036	0.0025 / 0.0025	mg/L	8.7%
DUP-12-22-21	Uranium	0.020	0.021	0.0025 / 0.00050	mg/L	4.9%
EB-12-22-21	Zinc	ND	0.0078	0.010 / 0.010	mg/L	----- ♦
MKTF-04R	**Zinc**	**0.030**	**0.075**	**0.010 / 0.010**	**mg/L**	**85.7%**
MKTF-01R	Zinc	ND	0.0088	0.010 / 0.010	mg/L	----- ♦
NDD-MW-1	Zinc	ND	0.016	0.010 / 0.010	mg/L	----- ♦
NDD-MW-2	Zinc	0.014	0.16	0.010 / 0.010	mg/L	167.8% ♦
DUP-12-22-21	Zinc	0.0085	0.016	0.010 / 0.010	mg/L	61.2% ♦

----- *RPD could not be calculated.*

♦ = *One or both of the detections were less than 2 times the applicable reporting limits, and qualification of data was not required.*

The differences for the corresponding analytical results were within five times the applicable reporting limits and validation action was not required, or the differences between the results were less than 30% indicating that the data were within the measurement uncertainty for the methods, and qualification of results was not required based on the analytical inconsistencies, with the following exception.

For sample MKTF-04R, the RPD value for zinc was greater than the field duplicate limit of 30%. The discrepancy was evaluated to be significant, and the total and dissolved zinc results for sample MKTF-04R were assigned J qualifiers.

FIELD DUPLICATE SUMMARY

Client Sample ID: MKTF-04R Field Duplicate Sample ID: DUP-12-22-21				
Analyte	**Method**	**Laboratory Result**	**Duplicate Result**	**Relative Percent Difference (RPD)**
Barium, Dissolved	E 200.7	0.55 mg/L	0.55 mg/L	0.0%
Barium, Total	E 200.7	0.60 mg/L	0.63 mg/L	4.9%

Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

The RPD values for total lead and 1,4-dioxane exceeded the data validation limit of 30% at 34.1% and 87.5%, which was evidence of poor precision. The total lead and 1,4-dioxane results were qualified as J for samples MKTF-04R and DUP-12-22-21.

The RPD values for multiple analytes greatly exceeded the data validation limit of 30%. These analyte results were qualified as J for the parent and duplicate samples, MKTF-04R and DUP-12-22-21, as well as the remaining associated samples with detections, based on evidence of extremely poor precision (RPD > 100%). Non-detect results were qualified as UJ in the associated samples.

DATA QUALIFICATION SUMMARY

Abbreviation	Reason
EBD	Equipment blank detection
ERPD-FD	High field duplicate RPD.
FBD	Field blank detection
HR-SUR	The surrogate percent recovery was greater than the upper acceptable limit indicating a possible high bias.
LR-LCS	The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias.
LR-SUR	The surrogate percent recovery was less than the lower acceptable limit indicating a possible low bias.
MBD	Method blank detection
DATA-COMP	Analytical results for analyte by different methods did not meet comparability limits.
MDLRL	Flagged by the laboratory: The result was greater than the MDL but less than the RL.

Tier II Data Validation Report Summary

Client: Marathon Oil	Laboratory: Hall Environmental Analysis Laboratory
Project Name: Western Refining Southwest, Quarterly GW	Sample Matrix: Groundwater
Project Number: 697-080-002 Task: 0006	Sample Start Date: 12/28/2021
Date Validated: 02/15/2022	Sample End Date: 12/28/2021
Parameters Included: ▪ Volatile Organic Compounds (VOC) by Environmental Protection Agency (EPA) Test Methods for Evaluating Solid Waste (SW-846) Method 8260B ▪ Semivolatile Organic Compounds (SVOC) by SW-846 Methods 8270C and 8270C with Selective Ion Monitoring (SIM) ▪ Total Petroleum Hydrocarbons (TPH) Gasoline Range Organics (GRO) by SW-846 Method 8015D ▪ TPH Diesel Range Organics (DRO) and Motor Oil Range Organics (MRO) by SW-846 Method 8015D Modified ▪ Total and Dissolved Metals by EPA Methods 200.7 and 200.8 ▪ Total and Dissolved Mercury by EPA Method 245.1 ▪ Anions by EPA Method 300.0 ▪ Chemical Oxygen Demand (COD) by EPA Method 410.4 ▪ Total Cyanide by Standard Methods for the Examination of Water and Wastewater (SM) Method 4500 CN E ▪ Biochemical Oxygen Demand (BOD) by SM Method 5210B ▪ E.Coli and Total Coliforms by SM Method 9223B	
Laboratory Project ID: 2112E16	
Data Validator: Daran O'Hollearn, Lead Project Scientist	
Reviewer: Mike Phillips, Senior Chemist	

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

Tier II Data Validation Report Summary

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Equipment blanks
- Field blanks
- Trip blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

Client Sample ID	Laboratory Sample Number
EB-12-28-21	2112E16-001
MKTF-16	2112E16-002
PW-4	2112E16-003
EP-8	2112E16-004
FB-12-28-21	2112E16-005
DUP-12-28-21	2112E16-006
Trip Blank	2112E16-007

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- ⊗ Initial and Continuing Calibrations (Items 9 and 10)
- ✓ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ✓ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ✓ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)
- ✓ Data Relationships (Item 23)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, February 2021.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

Qualifier	Definition
J	Estimated concentration
JB	Estimated concentration due to blank contamination
U	Evaluated to be undetected at the reporting limit
UJ	Estimated reporting limit

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 289 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

Method 8270: Pyridine is reported with an "E" flag. The "E" flag is used to represent an estimated value. Pyridine was not detected in the sample, but the calibration curve for this compound did not meet the method requirements.

“S" flags denote that the sample surrogate or spike result is outside of the acceptable limits due to sample dilution or matrix interferences.

2. Were the data free of data qualification flags and/or notes used by the laboratory? If no, define. No

Comments: The laboratory used the following data qualification flags with this data set.

D – Sample diluted due to matrix.

E – Estimated value.

J – Analyte detected below quantitation limits.

P – Sample pH not in range.

P1 – RPD value not applicable for sample concentrations less than 5 times the reporting limit.

R – RPD% outside of range.

S – % Recovery outside of range due to dilution or matrix.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

Method	Sample(s)	Analyte(s)	Dilution Factor
8260B	EP-8	VOCs	2
200.8	PW-4, DUP-12-2-21	Dissolved Metals	5
300.0	MKTF-16	Anions	5
200.7	MKTF-16	Total Iron	10
8270C	MKTF-16, EP-8	SVOCs	10
9223B	EP-8	E.Coli, Total Coliform	10
200.7	EP-8	Dissolved Iron	20
200.7	EP-8	Dissolved and Total Metals	50
200.8	EP-8	Dissolved and Total Metals	100
300.0	EP-8	Fluoride, Nitrate as N	100
300.0	EP-8	Bromide, Nitrite as N, Sulfate	1,000
410.4	EP-8	COD	1,000
300.0	EP-8	Chloride	20,000

VALIDATION CRITERIA CHECKLIST	
5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC?	No
Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exception. On the CoC pesticides were requested to be analyzed for sample EP-8, the laboratory did not report.	
6. Were samples received in good condition within method-specified requirements?	No
Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of 4°C ± 2°C at 0.8°C, 2.0°C, and 3.2°C as noted on the CoC and Sample Log-in Check List. Samples transferred to Pace Analytical National of Mount Juliet, Tennessee were received in good condition with the cooler temperature within the recommended range at 3.6°C as noted on the Sample Receipt Checklist. The cooler temperature below 2.0°C was judged as acceptable since the laboratory did not report the sample containers as broken or frozen. A preserved vial was submitted for the Method 8260B analysis for sample EP-8 but the pH at the time of analysis was greater than 2. Following EPA defined actions, the holding time for this sample was reduced from 14 days to 7 days from sampling to analysis.	
7. Were samples extracted/digested and analyzed within method-specified or technical holding times?	Yes
Comments: The samples were extracted/digested and analyzed within method-specific and reduced holding times.	
8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil.	Yes
Comments: The results were reported in concentration units of micrograms per liter (µg/L), milligrams per liter (mg/L), and most probable number per 100 mL (MPN/100mL), which were acceptable for the sample matrix and the analyses requested.	
9. Did the laboratory provide any specific initial and/or continuing calibration results?	No
Comments: Detailed initial and continuing calibration data were not included as part of this data set.	
10. If initial and/or continuing calibration results were provided, were the results within acceptable limits?	No
Comments: Detailed initial and continuing calibration data were not included as part of this data set. **For sample EP-8, the laboratory applied the E qualifier to the pyridine result in Method 8270C indicating that this compound was recovered outside the laboratory acceptance limits for the continuing calibration. Pyridine was not detected in sample EP-8, and this result was qualified with a UJ flag.**	
11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method?	Yes
Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.	
12. Were target analytes reported as not detected in the laboratory blanks?	No
Comments: Target analytes were reported as not detected in the laboratory blanks, with the following, exception. DRO was detected in the laboratory blank for Method 8015D batch 64796 at a concentration of 0.017 mg/L. Non-detections of this analyte in the associated samples and results greater than ten times the blank concentration did not require qualification.	

VALIDATION CRITERIA CHECKLIST

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

Method	Analytes	Batch	MS Sample Source
200.7	Total Metals	64812	Not Prepared
200.7	Dissolved Metals	B84839	EB-12-28-21
200.8	Total Metals	64812	EB-12-28-21
200.8	Dissolved Metals	A84886	EB-12-28-21
200.8	Dissolved Metals	A84953	MKTF-16
200.8	Dissolved Metals	B84912	Not Prepared
245.1	Dissolved and Total Mercury	65003	Not Prepared
245.1	Total Mercury	65021	Not Prepared
300.0	Anions	R84860	Not Prepared
300.0	Chloride	R85057	Not Prepared
410.4	COD	WG1796965	Not Associated
4500CN E	Cyanide	WG1796773	Not Associated
4500CN E	Cyanide	WG1797070	DUP-12-28-21
5210B	BOD	64772	Not Prepared
8015D	TPH DRO and MRO	64796	Not Prepared
8015D	GRO	G84851	Not Prepared
8015D	GRO	G84952	Not Prepared
8260B	VOCs	R84851	Not Prepared
8260B	VOCs	R84952	Not Prepared
8270C	SVOCs	64785	Not Prepared
8270 SIM	SVOCs	64771	Not Prepared
8270 SIM	SVOCs	64805	Not Prepared
9223B	E.Coli, Total Coliforms	64765	Not Prepared

Not Associated – The MS sample source was not associated with this project.
Not Prepared – Matrix spikes were not prepared for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The percent recoveries and RPDs for MS/MSDs prepared from project samples were within data validation and laboratory QC limits.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered, but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits., with the following exceptions.

The LCS/LCSD RPD values for 1-methylnaphthalene and 2-methylnaphthalene by Method 8270SIM in batch 64805 exceeded the QC limits of 33.1% and 35.4% at 35.1% and 38.3%, respectively. The analytes 1-methylnaphthalene and 2-methylnaphthalene were not detected in the associated samples. These results were qualified as UJ due to evidence of poor precision.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

The SVOC results for MKTF-16 and EP-8 were not qualified based on the surrogate non-conformances in the Method 8270C and/or Method 8270SIM analyses since the applied dilution of 10 times resulted in surrogate concentrations below routinely calibrated levels, and those results were deemed unreliable and possibly inaccurate.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB-12-28-21, and one equipment blank sample, EB-12-18-21, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were reported as not detected in the trip, field, and equipment blanks, with the exceptions listed in the following table.

Blank Sample ID	Method	Analyte	Concentration
Trip Blank	**8260B**	**Chloromethane**	**0.47 µg/L**
FB-12-28-21	**8260B**	**Acetone**	**3.50 µg/L**
FB-12-28-21	8260B	Chloromethane	0.74 µg/L
EB-12-28-21	**200.7**	**Dissolved Zinc**	**0.0046 mg/L**
EB-12-28-21	**200.8**	**Dissolved Uranium**	**0.00038 mg/L**
EB-12-28-21	300.0	Nitrate as N	0.061 mg/L
EB-12-28-21	8260B	Acetone	3.60 µg/L
EB-12-28-21	8260B	Chloromethane	0.61 µg/L

Detections of acetone, chloromethane, and dissolved uranium in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of dissolved zinc and dissolved uranium in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

VALIDATION CRITERIA CHECKLIST

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP-12-28-2021 was collected as a field duplicate of sample PW-4.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? Yes

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples.

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for these analyses, and the laboratory duplicate sample sources are summarized in the following table.

Method	Analytes	Batch	Laboratory Duplicate Sample Source
410.4	COD	WG1796965	Not Associated
4500CN E	Cyanide	WG1796773	Not Associated
4500CN E	Cyanide	WG1797070	Not Associated

Not Associated – The laboratory duplicate sample source was not associated with this project.

The RPD values for laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic and acceptable?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270), and the results were in agreement? Yes

Comments: Target analytes were not reported by more than one method in this data set, with the following exceptions.

Target analytes 1,4-dichlorobenzene, 1-methylnaphthalene, 2-methylnaphthalene, and naphthalene were reported by both Method 8260B and Method 8270C. These analytes were reported as not detected by both methods.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The total metals concentrations were greater than or equal to the dissolved fractions, with the following exceptions.

Sample ID	Analyte	Total Result	Dissolved Result	Reporting Limit	Units	RPD
PW-4	Manganese	0.0051	0.0052	0.0020 / 0.0020	mg/L	1.9 %
EP-8	Manganese	15	16	0.10 / 0.10	mg/L	6.5 %
DUP-12-28-21	Manganese	0.0050	0.0052	0.0020 / 0.0020	mg/L	3.9 %
EB-12-28-21	Uranium	ND	0.00038	0.00050 / 0.00050	mg/L	----- ♦
PW-4	Uranium	0.0015	0.0017	0.00050 / 0.0025	mg/L	12.5% ♦
EB-12-28-21	Zinc	ND	0.0046	0.010 / 0.010	mg/L	----- ♦
PW-4	Zinc	0.013	0.019	0.010 / 0.010	mg/L	37.5% ♦

VALIDATION CRITERIA CHECKLIST

Sample ID	Analyte	Total Result	Dissolved Result	Reporting Limit	Units	RPD
DUP-12-28-21	Zinc	0.011	0.017	0.010 / 0.010	mg/L	42.9% ♦

----- *RPD could not be calculated.*

♦ *= One or both of the detections were less than 2 times the applicable reporting limits, and qualification of data was not required.*

The differences for the corresponding analytical results were within five times the applicable reporting limits, and validation action was not required, or the differences between the results were less than 30% indicating that the data were within the measurement uncertainty for the methods, and qualification of results was not required based on the analytical inconsistencies.

FIELD DUPLICATE SUMMARY

Client Sample ID: PW-4 Field Duplicate Sample ID: DUP-12-28-21				
Analyte	**Method**	**Laboratory Result**	**Duplicate Result**	**Relative Percent Difference (RPD)**
Barium, Dissolved	E 200.7	0.014 mg/L	0.014 mg/L	0.0%
Barium, Total	E 200.7	0.014 mg/L	0.014 mg/L	0.0%
Iron, Dissolved	E 200.7	0.16 mg/L	0.16 mg/L	0.0%
Iron, Total	E 200.7	0.17 mg/L	0.18 mg/L	5.7%

Arsenic, Total	E200.8	0.0014 mg/L	0.0013 mg/L	7.4% +/-RL
Selenium, Total	E200.8	0.00093 mg/L	0.00079 mg/L	16.3% +/-RL
Uranium, Dissolved	E200.8	0.0017 mg/L	0.0014 mg/L	19.4% +/-RL
Uranium, Total	E200.8	0.0015 mg/L	0.0014 mg/L	6.9%

Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

DATA QUALIFICATION SUMMARY

Abbreviation	Reason
EBD	Equipment blank detection
ERPD-LCS	The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision.
FBD	Field blank detection
TBD	Trip blank detection
HDRRF	The %D between the initial calibration RRF and the opening CCV RRF was outside the acceptable limits.
MDLRL	Flagged by the laboratory: The result was greater than the MDL but less than the RL.

Analyte	Method	Field Sample ID	Lab Sample ID	Result	Limit	Units	Reviewer Qualifier	DV Flag Reasons
1,2,4-Trimethylbenzene	SW8260B	EP-8	2112e16-004a	1.8	2.0	µg/L	J	MDLRL

Tier II Data Validation Report Summary

Client: Marathon Oil	Laboratory: Hall Environmental Analysis Laboratory
Project Name: Western Refining Southwest, Quarterly GW	Sample Matrix: Groundwater
Project Number: 697-080-001 Task: 0016	Sample Start Date: 03/05/2021
Date Validated: 01/31/2022	Sample End Date: 03/05/2021
Parameters Included: ▪ Volatile Organic Compounds (VOC) by Environmental Protection Agency (EPA) Test Methods for Evaluating Solid Waste (SW-846) Method 8260B ▪ 1,2-Dibromoethane (EDB) by EPA Method 504.1 ▪ Semivolatile Organic Compounds (SVOC) by SW-846 Methods 8270C and 8270C with Selective Ion Monitoring (SIM) ▪ Total Petroleum Hydrocarbons (TPH) Gasoline Range Organics (GRO) by SW-846 Method 8015D ▪ TPH Diesel Range Organics (DRO) and Motor Oil Range Organics (MRO) by SW-846 Method 8015D Modified ▪ Total and Dissolved Metals by EPA Methods 200.7 and 200.8 ▪ Total and Dissolved Mercury by EPA Method 245.1 ▪ Anions by EPA Method 300.0	
Laboratory Project ID: 2103354	
Data Validator: Daran O'Hollearn, Lead Project Scientist	
Reviewer: Mike Phillips, Senior Chemist	

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Field blanks
- Equipment blanks
- Trip blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

Client Sample ID	Laboratory Sample Number
MKTF-31	2103354-001
MKTF-40	2103354-002
MKTF-28	2103354-003
MKTF-27	2103354-004
MKTF-25	2103354-005
DUP 3-5-21	2103354-006
EB 3-5-21	2103354-007
FB 3-5-21	2103354-008
TB	2103354-009

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- ○ Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ⊗ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ✓ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ○ Laboratory Duplicates (Item 22)
- ✓ Data Relationships (Item 23)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, February 2021.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

Qualifier	Definition
J	Estimated concentration
J+	The result is an estimated concentration, but may be biased high
UJ	Estimated reporting limit
U	Evaluated to be undetected at the reporting limit
JB	Estimated concentration due to blank contamination

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 1,145 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

Method 8015D DRO: The samples listed below had a single contaminant peak that was identified in the QC and the samples listed below. The contaminant peak was manually removed from the summation of the diesel range organics results. The concentration of the contaminant peak, in the samples that was removed, is listed next to the sample name: MKTF-31 (0.03mg/L), MKTF-40 (0.085mg/L), MKTF-28 (0.033mg/L), MKTF-27 (0.02mg/L), MKTF-25 (0.1mg/L), Dup 3-5-21 (0.11mg/L), LCS 58585 (0.06mg/L), LCSD 58585 (0.01mg/L). The laboratory is researching the source of the contamination to prevent this peak from appearing in the future.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

D – Sample diluted due to matrix.

J – Analyte detected below quantitation limits.

R – % RPD outside of range. *Mistakenly applied according to the DRO LCS/LCSD results in batch 58585.*

S – % Recovery outside of range due to dilution or matrix.

* – Value exceeds Maximum Contaminant Level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

Method	Sample(s)	Analyte(s)	Dilution Factor
200.7	Multiple Samples	Total and Dissolved Metals	5
200.8	Multiple Samples	Total and Dissolved Metals	5
300.0	Multiple Samples	Select Anions	5
8015D	MKTF-31	GRO	5
8260B	MKTF-31	VOC	5
200.7	Multiple Samples	Total and Dissolved Metals	10
8015D	MKTF-25	GRO	10
8260B	MKTF-25	VOC	10
300.0	Multiple Samples	Nitrite, Sulfate	20
300.0	MKTF-31, MKTF-28, MKTF-25	Chloride	50
300.0	MKTF-40, MKTF-27, DUP 3-5-21	Sodium	50
300.0	MKTF-40, MKTF-27, DUP 3-5-21	Chloride	500

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? Yes

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC.

VALIDATION CRITERIA CHECKLIST

6. Were samples received in good condition within method-specified requirements? No

Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of 4°C ± 2°C at 3.1°C, 5.3°C, and 7.5°C as noted on the CoC and Sample Log-in Check List.

The cooler temperature above 6°C was evaluated to be acceptable since the samples were received at the laboratory on the same day (within 24 hours) of the last sample collection time, and temperature equilibrium had not been established.

7. Were samples extracted/digested and analyzed within method-specified or technical holding times? Yes

Comments: The samples were extracted/digested and analyzed within method-specific holding times.

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. Yes

Comments: The results were reported in concentration units of micrograms per liter (µg/L) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.

9. Did the laboratory provide any specific initial and/or continuing calibration results? No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

Bis(2-ethylhexyl)phthalate was detected in the laboratory blank for Method 8270C batch 58560 at a concentration of 4.8 µg/L. Sample results detected below the blank concentration and/or the laboratory reporting limit were qualified with a U flag. Non-detections of this analyte in the associated samples did not require qualification.

GRO was detected in the laboratory blanks for Method 8015D batches B75848 and B75890 at concentrations of 0.023 mg/L and 0.022mg/L, respectively. Sample results detected below or equal to the blank concentration and/or the laboratory reporting limit were qualified with a U flag. Detection of this analyte in the associated samples greater than ten times the blank concentration did not require qualification.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

Method	Analytes	Batch	MS Sample Source
200.7	Total Metals	58618	MKTF-40
200.7	Total and Dissolved Metals	A75766	Not Prepared
200.7	Total and Dissolved Metals	A75785	Not Prepared
200.7	Dissolved Metals	B75766	EB 3-5-21

VALIDATION CRITERIA CHECKLIST

Method	Analytes	Batch	MS Sample Source
200.8	Total Metals	58618	MKTF-31
200.8	Dissolved Metals	A75856	Not Prepared
200.8	Total Metals	A75881	Not Prepared
200.8	Dissolved Metals	B75975	EB 3-5-21
245.1	Dissolved and Total Mercury	58666	DUP 3-5-21
300.0	Anions	R75758	Not Prepared
300.0	Chloride	R75784	Not Prepared
504.1	EDB	58710	Not Prepared
504.1	EDB	58711	Not Prepared
8015D	DRO and MRO	58585	Not Prepared
8015D	GRO	B75848	Not Prepared
8015D	GRO	B75890	EB 3-5-21
8260B	VOC	A75848	Not Prepared
8260B	VOC	A75890	EB 3-5-21
8270C	SVOC	58560	Not Prepared
8270C SIM	SVOC	58576	Not Prepared

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? No

Comments: The percent recoveries and RPDs for MS/MSDs prepared from project samples were within data validation and laboratory QC limits or were not applicable because the unspiked amount was more than four times the spike added, with the following exceptions.

The MS and MSD percent recoveries for total iron in Method 200.7 batch 58618 were outside the QC limits of 75-125% at 167% and 155%, respectively. Total iron was detected in the associated samples. These total iron results were qualified as J+ due to potential high bias.

The MSD percent recovery for total arsenic in Method 200.8 batch 58618 was outside the QC limits of 75-125% at 126%. The detected total arsenic results in the associated samples in batch 58618 were qualified as J+ due to potential high bias. Non-detected results for total arsenic in this batch did not require qualification.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits — No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPD values were within laboratory QC limits, with the following exceptions.

Method	Analyte	Batch	LCS Recovery	LCS/LCSD QC Limits
200.7	**Total Nickel**	**A75766**	**59.6%**	**70-130%**
200.7	**Total Aluminum**	**58618**	**133%**	**70-130%**
200.7	**Total Iron**	**58618**	**135%**	**70-130%**
200.7	**Dissolved Cadmium**	**B75766**	**65.1%**	**70-130%**

Detections of total aluminum and total iron in the associated samples were qualified as J+ due to evidence of potential high bias.

The LCS percent recoveries for total nickel and dissolved cadmium were less than the lower laboratory QC limits. These analytes were not detected in the associated samples and were qualified as UJ due to evidence of potential low bias.

The laboratory mistakenly applied the 'R' qualifier to the DRO LCS/LCSD results in batch 58585. Qualification of data was not required.

17. Were surrogate recoveries within laboratory QC limits? — No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

Since Method 8270 SIM surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the sample MKTF-25, and qualification of sample data was not required.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? — Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, TB, one field blank sample, FB 3-5-21, and one equipment blank sample, EB 3-5-21, were collected as part of this sample set.

VALIDATION CRITERIA CHECKLIST

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were reported as not detected in the trip, field, and equipment blanks, with the exceptions listed in the following table.

Blank Sample ID	Method	Analyte	Concentration
TB	8260B	2-Butanone	1.1 µg/L
TB	**8260B**	**Acetone**	**3.1 µg/L**
FB 3-5-21	8260B	Acetone	3.0 µg/L
FB 3-5-21	**8260B**	**Toluene**	**0.24 µg/L**
EB 3-5-21	**200.7**	**Dissolved Zinc**	**0.012 mg/L**
EB 3-5-21	**300.0**	**Nitrate**	**0.039 mg/L**
EB 3-5-21	8015D	GRO	0.023 mg/L
EB 3-5-21	8260B	Acetone	2.6 µg/L
EB 3-5-21	8260B	Toluene	0.22 µg/L

Sample results detected below the blank concentration and/or the laboratory reporting limit were qualified with a U flag. Results greater than the blank detection and/or the laboratory reporting limit but less than 10 times the blank concentration were qualified with a JB flag. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

The GRO results for the samples in batches B75848 and B75890 were previously qualified due to laboratory blank contamination; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP 3-5-21 was collected as a field duplicate of sample MKTF-40.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exception.

The RPD value for total manganese exceeded the data validation limit of 30% at 30.1% which was evidence of poor precision. The total manganese results were qualified as J for samples MKTF-40 and DUP 3-5-21.

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? N/A

Comments: Laboratory duplicate samples were not prepared/reported for this sample set.

VALIDATION CRITERIA CHECKLIST

23. Were the following data relationships realistic and acceptable?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270), and the results were in agreement? Yes

Comments: Target analytes were not reported by more than one method in this data set, with the following exceptions.

Target analytes 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1-methylnaphthalene, 2-methylnaphthalene, hexachlorobutadiene, and naphthalene were reported by both Method 8260B and Method 8270C. 1,2-Dibromoethane was reported from analyses by both Method 8260B and Method 504.1. These analytes were reported as not detected by both methods, or one or both results were within 5 times the applicable reporting limit.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The total metals concentrations were greater than or equal to the dissolved fractions, with the following exceptions.

FIELD DUPLICATE SUMMARY

Client Sample ID: MKTF-40 Field Duplicate Sample ID: DUP 3-5-21				
Analyte	**Method**	**Laboratory Result**	**Duplicate Result**	**Relative Percent Difference (RPD)**
Aluminum, Dissolved	E 200.7	0.018 mg/L	ND (0.020 mg/L)	DL
Aluminum, Total	E 200.7	1.8 mg/L	1.9 mg/L	5.4%
Barium, Dissolved	E 200.7	0.057 mg/L	0.055 mg/L	3.6%
Barium, Total	E 200.7	0.080 mg/L	0.085 mg/L	6.1%
Boron, Dissolved	E 200.7	2.0 mg/L	2.0 mg/L	0.0%
Boron, Total	E 200.7	2.2 mg/L	2.2 mg/L	0.0%
Calcium, Dissolved	E 200.7	250 mg/L	250 mg/L	0.0%
Cobalt, Dissolved	E 200.7	0.0028 mg/L	ND (0.0060 mg/L)	DL
Copper, Dissolved	E 200.7	ND (0.0060 mg/L)	0.0055 mg/L	DL
Iron, Dissolved	E 200.7	0.017 mg/L	ND (0.020 mg/L)	DL
Iron, Total	E 200.7	0.88 mg/L	0.98 mg/L	10.8%
Magnesium, Dissolved	E 200.7	51 mg/L	49 mg/L	4.0%
Manganese, Dissolved	E 200.7	0.0011 mg/L	0.00073 mg/L	40.4% +/-RL
Manganese, Total	**E 200.7**	**0.031 mg/L**	**0.042 mg/L**	**30.1%**
Nickel, Dissolved	E 200.7	0.0051 mg/L	0.0071 mg/L	32.8% +/-RL
Potassium, Dissolved	E 200.7	5.8 mg/L	6.1 mg/L	5.0%
Silver, Dissolved	E 200.7	0.0022 mg/L	0.0024 mg/L	8.7% +/-RL
Sodium, Dissolved	E 200.7	2,200 mg/L	2,100 mg/L	4.7%
Zinc, Dissolved	E 200.7	0.016 mg/L	0.011 mg/L	37.0% +/-RL
Lead, Total	E200.8	0.00096 mg/L	0.0011 mg/L	13.6% +/-RL
Bromide	E300	1.4 mg/L	1.4 mg/L	0.0%
Chloride	E300	3,200 mg/L	3,000 mg/L	6.5%
Nitrogen, Nitrate	E300	0.14 mg/L	0.13 mg/L	7.4% +/-RL
Sulfate	E300	520 mg/L	390 mg/L	28.6%
TPH GRO	SW8015	0.024 mg/L	0.023 mg/L	4.3% +/-RL
1,1-Dichloroethane	SW8260B	0.88 µg/L	0.87 µg/L	1.1% +/-RL
MTBE	SW8260B	1.2 µg/L	0.96 µg/L	22.2% +/-RL
Bis(2-ethylhexyl)phthalate	SW8270C	4.6 µg/L	4.8 µg/L	4.3% +/-RL

Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

The RPD value for total manganese exceeded the data validation limit of 30% at 30.1% which was evidence of poor precision. The total manganese results were qualified as J for samples MKTF-40 and DUP 3-5-21.

DATA QUALIFICATION SUMMARY

Abbreviation	Reason
EBD	Equipment blank detection
ERPD-FD	High field duplicate RPD.
FBD	Field blank detection
HR-LCS	The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias.
HR-MS	The MS and/or MSD percent recovery was greater than the upper acceptable limit indicating possible matrix interference.
LR-LCS	The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias.
MBD	Method blank detection
MDLRL	Flagged by the laboratory: The result was greater than the MDL but less than the RL.
TBD	Trip blank detection

Tier II Data Validation Report Summary

Client: Marathon Oil	Laboratory: Hall Environmental Analysis Laboratory
Project Name: Western Refining Southwest, Quarterly GW	Sample Matrix: Groundwater
Project Number: 697-080-001 Task: 0016	Sample Start Date: 03/09/2021
Date Validated: 02/07/2022	Sample End Date: 03/09/2021

Parameters Included:

- Volatile Organic Compounds (VOC) by Environmental Protection Agency (EPA) Test Methods for Evaluating Solid Waste (SW-846) Method 8260B
- 1,2-Dibromoethane (EDB) by EPA Method 504.1
- Semivolatile Organic Compounds (SVOC) by SW-846 Method 8270C and Method 8270C with Selective Ion Monitoring (SIM)
- Total Petroleum Hydrocarbons (TPH) Gasoline Range Organics (GRO) by SW-846 Method 8015D
- TPH Diesel Range Organics (DRO) and Motor Oil Range Organics (MRO) by SW-846 Method 8015D Modified
- Total and Dissolved Metals by EPA Methods 200.7 and 200.8
- Total and Dissolved Mercury by EPA Method 245.1
- Anions by EPA Method 300.0
- Cyanide by Standard Methods for the Examination of Water and Wastewater (SM) Method 4500 CN E

Laboratory Project ID: 2103470

Data Validator: Daran O'Hollearn, Lead Project Scientist

Reviewer: Mike Phillips, Senior Chemist

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

Client Sample ID	Laboratory Sample Number
MKTF-24	2103470-001
OAPIS-1	2103470-002
MKTF-29	2103470-003
MKTF-30	2103470-004
KA-3	2103470-005
NAPIS-3	2103470-006
FB 3/9/2021	2103470-007
DUP 3/9/2021	2103470-008
EB 3/9/2021	2103470-009
Trip Blank	2103470-010

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- ✓ Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ✓ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)
- ⊗ Data Relationships (Item 23)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, February 2021.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

Qualifier	Definition
J	Estimated concentration
J+	The result is an estimated concentration, but may be biased high
J-	The result is an estimated concentration, but may be biased low
UJ	Estimated reporting limit
U	Evaluated to be undetected at the reporting limit
JB	Estimated concentration due to blank contamination
R	Rejected, data not usable

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 1,216 data points. The data completeness calculation does not include any submitted blank sample results. Two data points were rejected. The data completeness measure for this data package is calculated to be 99.84% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

Method 8015D DRO: The samples listed below had a single contaminant peak that was identified in the QC and the samples listed below. The contaminant peak was manually removed from the summation of the diesel range organic results. The concentration of the contaminant peak, in the samples, that was removed is listed next to the sample name: MKTF-29 (0.36mg/L), KA-3 (0.65mg/L), Dup 3-9-21 (1.4mg/L), LCS 58742 (0.07mg/L), and LCSD 58742 (0.02mg/L). We are researching the source of the contamination to prevent this peak from appearing in the future.

Method 504.1: Sample Dup 3-9-21 was preserved with HCL.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

D – Sample Diluted Due to Matrix.

J – Analyte detected below quantitation limits.

J3 – The associated batch QC was outside the established quality control range for precision.

J6 – The sample matrix interfered with the ability to make any accurate determination; spike value is low.

P1 – RPD value not applicable for sample concentrations less than 5 times the reporting limit.

R – % RPD outside of range.

S – % Recovery outside of range due to dilution or matrix.

* – Value exceeds Maximum Contaminant Level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

Method	Sample(s)	Analyte(s)	Dilution Factor
8015D	OAPIS-1	GRO	2
8260B	OAPIS-1	VOC	2
200.7	Multiple Samples	Select Dissolved and Total Metals	5
200.8	Multiple Samples	Total Metals	5
300.0	Multiple Samples	Select Anions	5
200.7	Multiple Samples	Dissolved Sodium	10
200.7	MKTF-24, DUP 3/9/2021	Total Aluminum	10
8015D	MKTF-24	GRO	10
8260B	MKTF-24	VOC	10
200.7	OAPIS-1	Dissolved Sodium	20
200.7	MKTF-30	Total Aluminum and Iron	20
300.0	Multiple Samples	Select Anions	20
300.0	MKTF-30, DUP 3/9/2021	Chloride	50
Method	Sample(s)	Analyte(s)	Dilution Factor

VALIDATION CRITERIA CHECKLIST

8270C	OAPIS-1	SVOC	50
8260B	MKTF-24	Benzene	100
300.0	MKTF-24, OAPIS-1	Chloride	100
300.0	MKTF-29	Chloride	200

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? Yes

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC.

6. Were samples received in good condition within method-specified requirements? No

Comments: Samples were received on ice, in good condition, and with the cooler temperatures within the recommended temperature range of 4°C ± 2°C at 3.4°C, 3.6°C, and 4.1°C as noted on the CoC and Sample Log-in Check List. Samples transferred to Pace National of Mt. Juliet, Tennessee were received in good condition with the cooler temperature outside the recommended range at 1.8°C as noted on the Sample Receipt Checklist.

The cooler temperature below 2.0°C was judged as acceptable since the laboratory did not report the sample containers as broken or frozen.

7. Were samples extracted/digested and analyzed within method-specified or technical holding times? Yes

Comments: The samples were extracted/digested and analyzed within method-specific holding times.

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. Yes

Comments: The results were reported in concentration units of micrograms per liter (µg/L) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.

9. Did the laboratory provide any specific initial and/or continuing calibration results? Yes

Comments: Detailed calibration information was not provided as part of this laboratory report, but limited initial and continuing calibration verification summary data were available for Method 4500CN E.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? Yes

Comments: The available initial and continuing calibration summary data were within the acceptance limits.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

Method	Analyte	Batch	Concentration
200.8	Total Selenium	58668	0.00010 mg/L
200.8	Total Thallium	58668	0.0000029 mg/L
300.0	Nitrate as N	R75861	0.020 mg/L
8260B	Methylene Chloride	A76055	0.41 µg/L
Method	Analyte	Batch	Concentration

VALIDATION CRITERIA CHECKLIST

8270C	**Bis(2-ethylhexyl)phthalate**	**58648**	**6.6 µg/L**
8015D	**GRO**	**B75890**	**0.022 mg/L**
8015D	**GRO**	**B76015**	**0.017 mg/L**
8015D	**GRO**	**B76055**	**0.017 mg/L**

Detections of the identified analytes in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of the identified analytes in the associated samples that were greater than the reporting limits but less than or equal to 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

Method	Analytes	Batch	MS Sample Source
200.7	Total Metals	58668	MKTF-24
200.7	Dissolved Metals	A75995	Not Prepared
200.8	Total Metals	58668	OAPIS-1
200.8	Dissolved Metals	B75881	EB 3/9/2021
245.1	Total Mercury	58745	MKTF-29
245.1	Dissolved Mercury	58800	Not Prepared
300.0	Anions	R75825	Not Prepared
300.0	Anions	R75861	EB 3/9/2021
4500CN E	Cyanide	WG1633983	Not Associated
504.1	EDB	58711	Not Prepared
8015D	TPH DRO and MRO	58742	Not Prepared
8015D	GRO	B75890	Not Prepared
8015D	GRO	B76015	EB 3/9/2021
8015D	GRO	B76055	Not Prepared
8260B	VOC	A75890	Not Prepared
8260B	VOC	A76015	EB 3/9/2021
8260B	VOC	A76055	Not Prepared
8260B	VOC	C76015	Not Prepared
8270C SIM	SVOC	58646	Not Prepared
8270C	SVOC	58648	Not Prepared

Not Associated – The MS sample source was not associated with this project

Not Prepared – Matrix spikes were not prepared/reported for this batch.

VALIDATION CRITERIA CHECKLIST

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? No

Comments: The percent recoveries and RPDs for MS/MSDs prepared from project samples were within data validation and laboratory QC limits or were not applicable because the unspiked amount was more than four times the spike added, with the following exceptions.

Method	Analyte	Batch	MS Recovery	MSD Recovery	MS/MSD QC Limits
200.8	Total Selenium	58668	129%	----	75-125%
300.0	Bromide	R75861	Acceptable	107%	85.9-106%

Non-detections of total selenium in the associated samples did not require qualification due to the potential high bias. The MSD recovery for bromide was greater than the laboratory QC limits of 85.9-106% at 107%; however, this recovery was within the National Functional Guidelines data validation QC limits of 80-120%. Therefore, qualification of the bromide results was not required.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

Method	Analyte	Batch	LCS Recovery	LCSD Recovery	LCS/LCSD QC Limits	LCS/LCSD RPD	RPD QC Limits
200.7	**Dissolved and Total Beryllium**	**A75995**	**66.7%**	**----**	**70-130%**	**----**	**----**
200.7	**Dissolved and Total Cobalt**	**A75995**	**131%**	**----**	**70-130%**	**----**	**----**
8260B	**Ethylbenzene**	**C76015**	**0%**	**----**	**80-120%**	**----**	**----**
8260B	**MTBE**	**C76015**	**0%**	**----**	**80-120%**	**----**	**----**
8260B	**Total Xylenes**	**C76015**	**0%**	**----**	**80-120%**	**----**	**----**
8270 SIM	**Naphthalene**	**58646**	**Acceptable**	**Acceptable**	**18.5-83.4%**	**21.3%**	**20%**
8270 SIM	**1-Methylnaphthalene**	**58646**	**Acceptable**	**Acceptable**	**15.1-89.6%**	**21.6%**	**20%**
8270 SIM	**2-Methylnaphthalene**	**58646**	**Acceptable**	**Acceptable**	**15.0-90.6%**	**21.9%**	**20%**
8270 SIM	**Acenaphthylene**	**58646**	**Acceptable**	**Acceptable**	**18.2-95.3%**	**22.2%**	**20%**
8270 SIM	**Acenaphthene**	**58646**	**Acceptable**	**Acceptable**	**23.9-90.3%**	**22.5%**	**20%**
8270 SIM	**Fluorene**	**58646**	**Acceptable**	**Acceptable**	**16.8-106%**	**22.5%**	**20%**
8270 SIM	**Phenanthrene**	**58646**	**Acceptable**	**Acceptable**	**23.3-105%**	**23.7%**	**20%**
8270 SIM	**Anthracene**	**58646**	**Acceptable**	**Acceptable**	**15.0-112%**	**22.8%**	**20%**
8270 SIM	Chrysene	58646	107%	99.0%	32.6-96.6%	Acceptable	20%

Detections of dissolved cobalt in the associated samples were qualified as J+ due to evidence of potential high bias. Non-detection of dissolved cobalt and chrysene in the associated samples did not require qualification.

Analytes with LCS percent recoveries that were less than the lower laboratory QC limits were qualified as J- if detected and UJ if not detected in the associated samples due to evidence of potential low bias, and non-detections were qualified with R in the associated samples to indicate rejected (not usable) data based on evidence of extreme low bias (recovery less than 30%).

The analytes with LCS/LCSD RPD values that were above the QC limit were qualified as J for detections and UJ for non-detections for the associated samples to indicate estimated concentrations or estimated reporting limits, respectively, due to evidence of poor precision.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

Since Method 8270 SIM surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the sample MKTF-24, and qualification of sample data was not required.

The SVOC results for sample OAPIS-1 were not qualified based on the surrogate non-conformances in the Method 8270 SIM analyses since the applied dilution of 50 times resulted in surrogate concentrations below routinely calibrated levels, and those results were deemed unreliable and possibly inaccurate.

VALIDATION CRITERIA CHECKLIST

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB 3/9/2021, and one equipment blank sample, EB 3/9/2021, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were reported as not detected in the trip, field, and equipment blanks, with the exceptions listed in the following table.

Blank Sample ID	Method	Analyte	Concentration
FB 3/9/2021	8260B	2-Butanone	8.6 µg/L
FB 3/9/2021	**8260B**	**Acetone**	**4.7 µg/L**
EB 3/9/2021	200.7	Dissolved Boron	0.0069 mg/L
EB 3/9/2021	200.7	Dissolved Sodium	0.33 mg/L
EB 3/9/2021	**200.7**	**Dissolved Zinc**	**0.015 mg/L**
EB 3/9/2021	8015D	GRO	0.020 mg/L
EB 3/9/2021	8260B	Acetone	3.30 µg/L
EB 3/9/2021	8270C	Bis(2-ethylhexylphthalate)	6.70 µg/L
EB 3/9/2021	8270C	Di-n-octyl phthalate	9.1 µg/L

Detections of the identified analytes in the associated samples that were less than or equal to the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

The GRO results for the samples in batch B76015 were previously qualified due to laboratory blank contamination; therefore, additional qualification due to the equipment blank contamination was not required.

The bis(2-ethylhexyl)phthalate results for the samples in batch 58648 were previously qualified due to laboratory blank contamination; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP 3/9/2021 was collected as a field duplicate of sample MKTF-30.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exceptions.

The RPD values for multiple analytes exceeded the data validation limit of 30%. These analyte results were assigned J qualifiers for samples MKTF-30 and DUP 3/9/2021 due to evidence of poor precision.

The RPD value for dissolved manganese greatly exceeded the data validation limit of 30% at 112.5%. The dissolved manganese results were qualified as J for the parent and duplicate samples, MKTF-30 and DUP 3/9/2021, as well as the remaining detected dissolved manganese results in the associated samples based on evidence of extremely poor precision (RPD > 100%). The non-detected dissolved manganese results in the associated samples were assigned UJ qualifiers.

VALIDATION CRITERIA CHECKLIST

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? Yes

Comments: A laboratory duplicate was prepared for the analysis of cyanide in batch WG1633983 from sample OAPIS-1 and from a sample not associated with this data set. The RPD for the laboratory duplicate prepared from a project sample was within laboratory acceptance limits

The RPD value for the laboratory duplicate sample prepared from a non-project sample was evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic and acceptable?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270), and the results were in agreement? Yes

Comments: Target analytes were not reported by more than one method in this data set, with the following exceptions.

Target analytes 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1-methylnaphthalene, 2-methylnaphthalene, hexachlorobutadiene, and naphthalene were reported by both Method 8260B and Method 8270C. 1,2-Dibromoethane was reported from analyses by both Method 8260B and 504.1. These analytes were reported as not detected by both methods, or one or both results were within 5 times the applicable reporting limit.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The total metals concentrations were greater than or equal to the dissolved fractions, with the following exceptions.

Sample ID	Analyte	Total Result	Dissolved Result	Reporting Limit	Units	RPD
MKTF-29	Arsenic	ND	0.0010	0.0050 / 0.0010	mg/L	----- ♦
KA-3	Arsenic	ND	0.00094	0.0050 / 0.0010	mg/L	----- ♦

----- *RPD could not be calculated.*

♦ *= One or both of the detections were less than 2 times the applicable reporting limits and qualification of data was not required.*

The differences for the corresponding analytical results were within five times the applicable reporting limits and validation

VALIDATION CRITERIA CHECKLIST
action was not required, or the differences between the results were less than 30% indicating that the data were within the measurement uncertainty for the methods and qualification of results was not required based on the analytical inconsistencies, with the following exceptions. **For sample OAPIS-1, the RPD values for copper and zinc were greater than the field duplicate limit of 30% . The discrepancies were evaluated to be significant, and the total and dissolved copper and zinc results for sample OAPIS-1 were assigned J qualifiers.**

FIELD DUPLICATE SUMMARY

Client Sample ID: MKTF-30 Field Duplicate Sample ID: DUP 3/9/2021				
Analyte	**Method**	**Laboratory Result**	**Duplicate Result**	**Relative Percent Difference (RPD)**
Aluminum, Dissolved	E 200.7	0.025 mg/L	ND (0.020 mg/L)	DL
Aluminum, Total	**E 200.7**	**15 mg/L**	**6.7 mg/L**	**76.5%**

Bis(2-ethylhexyl)phthalate	SW8270C	9.2 µg/L	7.3 µg/L	23.0% +/-RL
Di-n-butylphthalate	SW8270C	6.8 µg/L	6.8 µg/L	0.0% +/-RL

Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

The RPD values for multiple analytes exceeded the data validation limit of 30%. These analyte results were assigned J qualifiers for samples MKTF-30 and DUP 3/9/2021 due to evidence of poor precision.

The RPD value for dissolved manganese greatly exceeded the data validation limit of 30% at 112.5%. The dissolved manganese results were qualified as J for the parent and duplicate samples, MKTF-30 and DUP 3/9/2021, as well as the remaining detected dissolved manganese results in the associated samples based on evidence of extremely poor precision (RPD > 100%). The non-detect dissolved manganese results in the associated samples were assigned UJ qualifiers.

DATA QUALIFICATION SUMMARY

Abbreviation	Reason
DIS-TOT	Dissolved metals concentration was greater than the associated total metals result
EBD	Equipment blank detection
ERPD-FD	High field duplicate RPD.
ERPD-LCS	The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision.
FBD	Field blank detection
HR-LCS	The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias.
LR-LCS	The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias.
MBD	Method blank detection
MDLRL	Flagged by the laboratory: The result was greater than the MDL but less than the RL.

Tier II Data Validation Report Summary

Client: Marathon Oil	Laboratory: Hall Environmental Analysis Laboratory
Project Name: Western Refining Southwest, Quarterly GW	Sample Matrix: Groundwater
Project Number: 697-080-001 Task: 0016	Sample Start Date: 03/09/2021
Date Validated: 02/07/2022	Sample End Date: 03/10/2021

Parameters Included:

- Volatile Organic Compounds (VOC) by Environmental Protection Agency (EPA) Test Methods for Evaluating Solid Waste (SW-846) Method 8260B
- 1,2-Dibromoethane (EDB) by EPA Method 504.1
- Semivolatile Organic Compounds (SVOC) by SW-846 Method 8270C and Method 8270C with Selective Ion Monitoring (SIM)
- Total Petroleum Hydrocarbons (TPH) Gasoline Range Organics (GRO) by SW-846 Method 8015D
- TPH Diesel Range Organics (DRO) and Motor Oil Range Organics (MRO) by SW-846 Method 8015D Modified
- Total and Dissolved Metals by EPA Methods 200.7 and 200.8
- Total and Dissolved Mercury by EPA Method 245.1
- Anions by EPA Method 300.0
- Chemical Oxygen Demand (COD) by EPA Method 410.4
- Total Dissolved Solids (TDS) by Standard Methods for the Examination of Water and Wastewater (SM) Method 2540C
- Suspended Solids (SS) by SM Method 2540D
- Biochemical Oxygen Demand (BOD) by SM Method 5210B

Laboratory Project ID: 2103532

Data Validator: Daran O'Hollearn, Lead Project Scientist

Reviewer: Mike Phillips, Senior Chemist

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples

Tier II Data Validation Report Summary

- Organic system monitoring compounds (surrogates)

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Equipment blanks
- Trip blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

Client Sample ID	Laboratory Sample Number
NAPIS-2	2103532-001
STP-1-NW	2103532-002
MKTF-50	2103532-003
MKTF-49	2103532-004
MKTF-10	2103532-005
MKTF-11	2103532-006
MKTF-02	2103532-007
OW-56	2103532-008
West LDU	2103532-009
East LDU	2103532-010
EB 3-10-21	2103532-011
STP-EP	2103532-012
DUP 3-10-21	2103532-013
Trip Blank	2103532-014

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- ○ Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Equipment and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)
- ✓ Data Relationships (Item 23)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, February 2021.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

Qualifier	Definition
J	Estimated concentration
J+	The result is an estimated concentration, but may be biased high
J-	The result is an estimated concentration, but may be biased low
UJ	Estimated reporting limit
U	Evaluated to be undetected at the reporting limit
JB	Estimated concentration due to blank contamination
R	Rejected, data not usable

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 1,783 data points. The data completeness calculation does not include any submitted blank sample results. Eleven data points were rejected. The data completeness measure for this data package is calculated to be 99.38% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

Method 8015D DRO: The samples listed below had a single contaminant peak that was identified in the QC and the samples listed below. The contaminant peak was manually removed from the summation of the diesel range organics results. The concentration of the contaminant peak, in the samples that was removed, is listed next to the sample name: NAPIS-2 (0.15mg/L), STP-1 NW (0.16mg/L), MKTF-50 0.1mg/L), MKTF- 11 (0.22mg/L), MKTF-02 (0.6mg/L), West LDU (0.1mg/L), STP-EP (0.98mg/L), Dup 3-10-21 (0.01mg/L), LCS 58742 (0.07mg/L), LCSD 58742 (0.02mg/L), LCS 58760 (0.04mg/L), LCSD 58760 (0.01mg/L). We are researching the source of the contamination to prevent this peak from appearing in the future.

Method 504.1: Sample EB 3-10-21 was preserved with HCL.

2. Were the data free of data qualification flags and/or notes used by the laboratory? If no, define. No

Comments: The laboratory used the following data qualification flags with this data set.

D – Sample Diluted Due to Matrix.

J – Analyte detected below quantitation limits.

S – % Recovery outside of range due to dilution or matrix.

* – Value exceeds Maximum Contaminant Level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

Method	Sample(s)	Analyte(s)	Dilution Factor
8015D	West LDU	GRO	2
8260B	West LDU	VOC	2
200.7	Multiple Samples	Select Dissolved and Total Metals	5
200.8	Multiple Samples	Select Dissolved and Total Metals	5
300.0	Multiple Samples	Select Anions	5
8015D	Multiple Samples	GRO	5
8260B	Multiple Samples	VOC	5
200.7	Multiple Samples	Select Dissolved and Total Metals	10
8015D	Multiple Samples	GRO	10
8260B	Multiple Samples	Select VOC	10

300.0	MKTF-02	Chloride	500

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? Yes

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC.

6. Were samples received in good condition within method-specified requirements? No

Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of 4°C ± 2°C between 2.2°C and 6.5°C as noted on the CoC and Sample Log-in Check List. Samples transferred to Pace National of Mt. Juliet, Tennessee were received in good condition with the cooler temperature outside the recommended range at 1.8°C as noted on the CoC.

The cooler temperature above 6°C was evaluated to be acceptable since the samples were received at the laboratory on the same day (within 24 hours) of the last sample collection time, and temperature equilibrium had not been established.

The cooler temperature below 2.0°C was judged as acceptable since the laboratory did not report the sample containers as broken or frozen.

7. Were samples extracted/digested and analyzed within method-specified or technical holding times? Yes

Comments: The samples were extracted/digested and analyzed within method-specific holding times.

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. Yes

Comments: The results were reported in concentration units of micrograms per liter (µg/L) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.

9. Did the laboratory provide any specific initial and/or continuing calibration results? No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

Method	Analyte	Batch	Concentration
200.8	**Total Antimony**	**58685**	**0.00012 mg/L**
200.8	**Total Arsenic**	**58685**	**0.000012 mg/L**
200.8	**Total Lead**	**58685**	**0.000016 mg/L**
8260B	Methylene Chloride	A76055	0.41 µg/L
8270C	**Bis(2-ethylhexyl)phthalate**	**58720**	**8.4 µg/L**
8270C	**DI-n-butyl phthalate**	**58720**	**7.7 µg/L**
8270C	**Di-n-octyl phthalate**	**58720**	**9.2 µg/L**
8015D	**GRO**	**B76015**	**0.017 mg/L**
8015D	**GRO**	**B76055**	**0.017 mg/L**

Detections of the identified analytes in the associated samples that were less than the blank results and/or less than or equal to the applicable reporting limits were assigned U qualifiers. Detections of the identified analytes in the associated samples that were greater than the reporting limits but less than or equal to 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

Method	Analytes	Batch	MS Sample Source
200.7	Total Metals	58685	STP-1-NW, MKTF-50

Not Associated – The MS sample source was not associated with this project
Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The percent recoveries and RPDs for MS/MSDs prepared from project samples were within data validation and laboratory QC limits or were not applicable because the unspiked amount was more than four times the spike added, with the following exception.

The MS and MSD percent recoveries for bromide in Method 300.0 batch A75861 were outside the laboratory QC limits of 85.9-106% at 107% and 107%, respectively. Although the MS and MSD recoveries for bromide were greater than the laboratory QC limits of 85.9-106%, these recoveries were within the National Functional Guidelines data validation QC limits of 80-120%. Therefore, qualification of the bromide results was not required.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

Method	Analyte	Batch	LCS Recovery	LCS/LCSD QC Limits
200.7	**Total Copper**	**A75962**	**63.4%**	**70-130%**
200.7	Total Nickel	A75962	158%	70-130%
200.7	**Dissolved Beryllium**	**A75955**	**66.7%**	**70-130%**
200.7	**Dissolved Cobalt**	**A75955**	**131%**	**70-130%**
200.7	**Dissolved Beryllium**	**B75995**	**65.1%**	**70-130%**
5210B	**BOD**	**58661**	**83.8%**	**84.6-115.4%**

Detections of dissolved cobalt in the associated samples were qualified as J+ due to evidence of potential high bias. Non-detection of dissolved cobalt and total nickel in the associated samples did not require qualification.

Analytes with LCS percent recoveries that were less than the lower laboratory QC limits were qualified as J- if detected and UJ if not detected in the associated samples due to evidence of potential low bias.

VALIDATION CRITERIA CHECKLIST

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

The Method 8270C surrogates 2-fluorophenol and 2,4,6-tribromophenol for sample MKTF-49 recovered below the acceptance limits of 15-88.8% and 15-97.4% at 0.0% and 2.81%, respectively. The target analytes associated with these surrogates that were detected in sample MKTF-49 were assigned J- qualifiers due to evidence of potential low bias. The associated target analyte results not detected in sample MKTF-49 were qualified as R indicating rejected results, data not usable.

Since Method 8270C surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the samples MKTF-50, MKTF-10, and DUP 3-10-21, and qualification of sample data was not required.

The SVOC results for sample MKTF-50, MKTF-49, MKTF-10, MKTF-11, MKTF-02, and DUP 3-10-21 were not qualified based on the surrogate non-conformances in the Method 8270 SIM analyses since the applied dilutions of 50, 10, 10, 10, 10, and 10 times resulted in surrogate concentrations below routinely calibrated levels, and those results were deemed unreliable and possibly inaccurate.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, and one equipment blank sample, EB 3-10-2021, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were reported as not detected in the trip, field, and equipment blanks, with the exceptions listed in the following table.

Blank Sample ID	Method	Analyte	Concentration
EB 3-10-21	**200.7**	**Dissolved Zinc**	**0.019 mg/L**
EB 3-10-21	8015D	GRO	0.016 mg/L

Detections of dissolved zinc in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of the identified analytes in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Detections of dissolved zinc in the associated samples that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

The GRO results for the samples in batch B76015 were previously qualified due to laboratory blank contamination; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? No

Comments: The number of field duplicates collected was not equal to at least 10% of the number of samples. Sample DUP 3-10-21 was collected as a field duplicate of sample MKTF-11.

VALIDATION CRITERIA CHECKLIST

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exceptions.

The RPD values for 1-methylnaphthalene, 2-methylnaphthalene, and 3,4-methylphenol exceeded the data validation limit of 30% at 31.6%. 34.8%, and 30.8%, respectively, which was evidence of poor precision. These analyte results were qualified as J for samples MKTF-11 and DUP 3-10-21.

The RPD value for total xylenes greatly exceeded the data validation limit of 30% at 103.3%. The total xylenes results were qualified as J for the parent and duplicate samples, MKTF-11 and DUP 3-10-21, as well as the remaining detected total xylenes results in the associated samples based on evidence of extremely poor precision (RPD > 100%). The non-detected total xylene results in the associated samples were assigned UJ qualifiers.

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? N/A

Comments: Laboratory duplicate pairs were prepared for the analysis of COD in batch R76599 / WG1636311 from samples not associated with this data set.

The RPD values for the laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic and acceptable?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270), and the results were in agreement? Yes

Comments: Target analytes were not reported by more than one method in this data set, with the following exceptions.

Target analytes 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1-methylnaphthalene, 2-methylnaphthalene, hexachlorobutadiene, and naphthalene were reported by both Method 8260B and Method 8270C. 1,2-Dibromoethane was reported from analyses by both Method 8260B and 504.1. These analytes were reported as not detected by both methods, or one or both results were within 5 times the applicable reporting limit, with the following exception.

The naphthalene results for sample MKTF-10 were detected by Method 8260B and Method 8270C at more than 5 times the applicable reporting limits. The difference was within the variability of the analytical methods, and the results did not require qualification.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The total metals concentrations were greater than or equal to the dissolved fractions, with the following exceptions.

Sample ID	Analyte	Total Result	Dissolved Result	Reporting Limit	Units	RPD

Naphthalene	SW8270C	12 µg/L	16 µg/L	28.6%
Phenol	SW8270C	86 µg/L	110 µg/L	24.5%

Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

The RPD values for 1-methylnaphthalene, 2-methylnaphthalene, and 3,4-methylphenol exceeded the data validation limit of 30% at 31.6%, 34.8%, and 30.8%, respectively, which was evidence of poor precision. These analyte results were qualified as J for samples MKTF-11 and DUP 3-10-21.

The RPD value for total xylenes greatly exceeded the data validation limit of 30% at 103.3%. The total xylenes results were qualified as J for the parent and duplicate samples, MKTF-11 and DUP 3-10-21, as well as the remaining detected total xylenes results in the associated samples based on evidence of extremely poor precision (RPD > 100%). The non-detected total xylene results in the associated samples were assigned UJ qualifiers.

DATA QUALIFICATION SUMMARY

Abbreviation	Reason
EBD	Equipment blank detection
ERPD-FD	High field duplicate RPD.
HR-LCS	The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias.
LR-LCS	The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias.
LR-SUR	The surrogate percent recovery was less than the lower acceptable limit indicating a possible low bias.
MBD	Method blank detection
MDLRL	Flagged by the laboratory: The result was greater than the MDL but less than the RL.

Tier II Data Validation Report Summary

Client: Marathon Oil	Laboratory: Hall Environmental Analysis Laboratory
Project Name: Western Refining Southwest, Quarterly GW	Sample Matrix: Groundwater
Project Number: 697-080-001 Task: 0016	Sample Start Date: 03/10/2021
Date Validated: 02/07/2022	Sample End Date: 03/11/2021
Parameters Included: ▪ Volatile Organic Compounds (VOC) by Environmental Protection Agency (EPA) Test Methods for Evaluating Solid Waste (SW-846) Method 8260B ▪ 1,2-Dibromoethane (EDB) by EPA Method 504.1 ▪ Semivolatile Organic Compounds (SVOC) by SW-846 Methods 8270C and 8270C with Selective Ion Monitoring (SIM) ▪ Total Petroleum Hydrocarbons (TPH) Gasoline Range Organics (GRO) by SW-846 Method 8015D ▪ TPH Diesel Range Organics (DRO) and Motor Oil Range Organics (MRO) by SW-846 Method 8015D Modified ▪ Total and Dissolved Metals by EPA Methods 200.7 and 200.8 ▪ Total and Dissolved Mercury by EPA Method 245.1 ▪ Anions by EPA Method 300.0	
Laboratory Project ID: 2103612	
Data Validator: Daran O'Hollearn, Lead Project Scientist	
Reviewer: Mike Phillips, Senior Chemist	

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

Tier II Data Validation Report Summary

- Equipment blanks
- Field blanks
- Trip blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

Client Sample ID	Laboratory Sample Number
BW-4B	2103612-001
MKTF-44	2103612-002
MKTF-47	2103612-003
MKTF-38	2103612-004
MKTF-35	2103612-005
MKTF-18	2103612-006
EB 3-11-21	2103612-007
DUP 3-11-21	2103612-008
Field Blank 3-10-2021	2103612-009
Field Blank 3-11-2021	2103612-010
MKTF-16	2103612-011
MKTF-21	2103612-012
Trip Blank	2103612-013

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ⊗ Holding Times and Preservation (Items 6 and 7)
- ○ Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ⊗ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ○ Laboratory Duplicates (Item 22)
- ⊗ Data Relationships (Item 23)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, February 2021.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

Qualifier	Definition
J	Estimated concentration
J+	The result is an estimated concentration, but may be biased high
J-	The result is an estimated concentration, but may be biased low
UJ	Estimated reporting limit
U	Evaluated to be undetected at the reporting limit
JB	Estimated concentration due to blank contamination

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 1,418 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

Method 8015D DRO: The samples listed below had a single contaminant peak that was identified in the QC and the samples listed below. The contaminant peak was manually removed from the summation of the diesel range organics results. The concentration of the contaminant peak, in the samples that was removed, is listed next to the sample name: MKTF-44 (2.7mg/L), MKTF-38 (3.1mg/L), Dup 3 11-21 (0.62mg/L), LCS 58760 (LCS 0.02mg/L), and LCSD 58760 (1.05mg/L). We are researching the source of the contamination to prevent this peak from appearing in the future.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

J – Analyte detected below quantitation limits.

P – Sample pH not in range.

R – % RPD outside of range.

S – % Recovery outside of range due to dilution or matrix.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

Method	Sample(s)	Analyte(s)	Dilution Factor
8015D	MKTF-21	GRO	2
8260B	MKTF-21	VOC	2
200.7	Multiple Samples	Select Dissolved and Total Metals	5
200.8	MKTF-35	Total Antimony and Lead	5
200.8	MKTF-21	Total Arsenic	5
300.0	Multiple Samples	Select Anions	5
200.7	Multiple Samples	Select Dissolved and Total Metals	10
8015D	MKTF-35, DUP 3-11-21	GRO	10
8260B	MKTF-35, DUP 3-11-21	Select VOC	10
8270C	MKTF-35, DUP 3-11-21	Naphthalene	10
8270C	MKTF-18	1-Methylnaphthalene	10
200.7	DUP 3-11-21	Total Aluminum and Iron	20
300.0	Multiple Samples	Select Anions	20
200.7	MKTF-35	Total Aluminum and Iron	50
300.0	MKTF-47, MKTF-38	Chloride	50
8015D	MKTF-16	GRO	100
8260B	MKTF-35, DUP 3-11-21	Benzene	100
8260B	MKTF-16	VOC	100

VALIDATION CRITERIA CHECKLIST

Method	Sample(s)	Analyte(s)	Dilution Factor
8260B	MKTF-18	Benzene	200
200.7	MKTF-21	Total Iron	200

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? Yes

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC.

6. Were samples received in good condition within method-specified requirements? No

Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of 4°C ± 2°C between 4.1°C and 7.8°C as noted on the CoC and Sample Log-in Check List.

The cooler temperature above 6°C was evaluated to be acceptable since the samples were received at the laboratory on the same day (within 24 hours) of the last sample collection time, and temperature equilibrium had not been established.

A preserved vial was submitted for the Method 8260B analysis for sample Trip Blank, but the pH at the time of analysis was greater than 2. Following EPA defined actions, the holding time for this sample was reduced from 14 days to 7 days from sampling to analysis.

7. Were samples extracted/digested and analyzed within method-specified or technical holding times? No

Comments: The samples were extracted/digested and analyzed within method-specific and reduced holding times, with the following exception.

Method 8260B: **VOCs were analyzed outside the reduced holding time of 7 days for sample Trip Blank by approximately 1 day. The VOC target analytes were not detected in the sample Trip Blank. These results were qualified as UJ due to the holding time exceedance.**

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. Yes

Comments: The results were reported in concentration units of micrograms per liter (µg/L) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.

9. Did the laboratory provide any specific initial and/or continuing calibration results? No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

Method	Analyte	Batch	Concentration
200.8	**Lead**	**58726**	**0.000035 mg/L**
8260B	Methylene Chloride	A76055	0.41 µg/L
8270C	**Bis(2-ethylhexyl)phthalate**	**58720**	**8.4 µg/L**
8270C	Di-n-butyl phthalate	58720	7.7 µg/L
8270C	**Di-n-octyl phthalate**	**58720**	**9.2 µg/L**
8270C	**Bis(2-ethylhexyl)phthalate**	**58736**	**6.9 µg/L**
8270C	**Di-n-butyl phthalate**	**58736**	**6.6 µg/L**
8270C	**Di-n-octyl phthalate**	**58736**	**9.1 µg/L**
8015D	**GRO**	**B76015**	**0.017 mg/L**
8015D	**GRO**	**B76055**	**0.017 mg/L**
8015D	GRO	B76093	0.014 mg/L

Detections of the identified analytes in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

Method	Analytes	Batch	MS Sample Source
200.7	Total Metals	58726	MKTF-18
200.7	Dissolved Metals	A76034	EB 3-11-21
200.7	Dissolved Metals	A76065	MKTF-47, MKTF-35
200.7	Dissolved Metals	A76106	MKTF-18
200.8	Total Metals	58726	MKTF-35
200.8	Dissolved Metals	B75953	BW-4B
200.8	Dissolved Sodium	B75975	Not Prepared
245.1	Total Mercury	58766	Not Prepared
245.1	Dissolved Mercury	58801	MKTF-38
300.0	Anions	R75904	Not Prepared
300.0	Chloride	R75934	Not Prepared
504.1	EDB	58711	Not Prepared
8015D	TPH DRO and MRO	58760	Not Prepared
8015D	GRO	B76015	Not Prepared
8015D	GRO	B76055	Not Prepared
8015D	GRO	B76093	MKTF-44
8260B	VOC	A76015	Not Prepared
8260B	VOC	A76055	Not Prepared

VALIDATION CRITERIA CHECKLIST

Method	Analytes	Batch	MS Sample Source
8260B	VOC	A76093	MKTF-44
8260B	VOC	R76128	Not Prepared
8270 SIM	SVOC	58709	Not Prepared
8270 SIM	SVOC	58715	Not Prepared
8270C	SVOC	58720	Not Prepared
8270C	SVOC	58736	Not Prepared

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? No

Comments: The percent recoveries and RPDs for MS/MSDs prepared from project samples were within data validation and laboratory QC limits or were not applicable because the unspiked amount was more than four times the spike added, with the following exceptions.

Method	Analyte	Batch	MS Recovery	MSD Recovery	MS/MSD QC Limits	MS/MSD RPD	RPD QC Limits
200.7	**Total Aluminum**	**58726**	**211%**	**208%**	**75-125%**	**Acceptable**	**20%**
200.8	**Total Antimony**	**58726**	**30.7%**	**----**	**75-125%**	**----**	**----**
8260B	**Benzene**	**A76093**	**Acceptable**	**Acceptable**	**70-130%**	**22.3%**	**20%**
8260B	**Toluene**	**A76093**	**Acceptable**	**Acceptable**	**70-130%**	**20.2%**	**20%**
8260B	**1,1-Dichloroethene**	**A76093**	**Acceptable**	**Acceptable**	**70-130%**	**21.3%**	**20%**

Total aluminum with MS and MSD recoveries greater than the laboratory or data validation QC limits were detected in the associated samples, and the results were qualified as J+ due to potential high bias. Non-detections of total aluminum in the associated samples did not require qualification.

Total antimony was detected in the associated sample MKTF-21. This result was qualified as J- due to evidence of potential low bias. Non-detections of total antimony in the associated samples were qualified as UJ.

The analytes with MS/MSD RPD values that were above the QC limit were qualified as J for detections and UJ for non-detections for the associated samples due to evidence of poor precision.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

Method	Analyte	Batch	LCS Recovery	LCSD Recovery	LCS/LCSD QC Limits	LCS/LCSD RPD	RPD QC Limits
200.7	**Total Nickel**	**58726**	**138%**	**----**	**70-130%**	**----**	**----**
200.7	Dissolved Beryllium	A76034	134%	----	70-130%	----	----
8270 SIM	Benz(a)anthracene	58715	114%	119%	38.7-111%	Acceptable	20%
8270 SIM	Benzo(b)fluoranthene	58715	117%	120%	23.8-113%	Acceptable	20%
8270 SIM	Dibenz(a,h)anthracene	58715	Acceptable	118%	17.8-118%	Acceptable	20%
8270 SIM	**Indeno(1,2,3-cd)pyrene**	**58715**	**138%**	**241%**	**20.8-115%**	**54.4%**	**20%**

Detections of total nickel in the associated samples were qualified as J+ due to evidence of potential high bias. Non-detections of the identified analytes in the associated samples did not require qualification.

Indeno(1,2,3-cd)pyrene was not detected in the associated samples. These associated indeno(1,2,3-cd)pyrene results were qualified as UJ due to evidence of poor precision.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

Since Method 8270C and 8270 SIM surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the samples MKTF-35 and DUP 3-11-21, and qualification of sample data was not required.

The Method 8015D surrogate bromofluorobenzene was recovered in sample MKTF-21 above the acceptance limit of 70-130% at 132%. The target analyte GRO associated with this surrogate was detected in sample MKTF-21, and this result was assigned a J+ qualifier due to evidence of potential high bias.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, two field blank samples, Field Blank 3-10-2021 and Field Blank 3-11-2021, and one equipment blank sample, EB 3-11-2021, were collected as part of this sample set.

VALIDATION CRITERIA CHECKLIST

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were reported as not detected in the trip, field, and equipment blanks, with the exceptions listed in the following table.

Blank Sample ID	Method	Analyte	Concentration
Field Blank 3-10-2021	8015D	GRO	0.018 mg/L
Field Blank 3-11-2021	8015D	GRO	0.017 mg/L
EB 3-11-21	**200.7**	**Dissolved Zinc**	**0.016 mg/L**
EB 3-11-21	**300.0**	**Nitrate**	**0.037 mg/L**

Detections of dissolved zinc and nitrate as N in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. The detection of dissolved zinc in sample BW-4B that was greater than the reporting limit but less than 10 times the blank result was assigned a JB qualifier. Non-detections of nitrate as N in the associated samples and detections of nitrate as N that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

The GRO results for the samples in batch B76015 and B76055 were previously qualified due to laboratory blank contamination; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP 3-11-21 was collected as a field duplicate of sample MKTF-35.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exceptions.

The RPD values for multiple analytes exceeded the data validation limit of 30%. These analyte results were assigned J qualifiers for samples MKTF-35 and DUP 3-11-21 due to evidence of poor precision.

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? N/A

Comments: Laboratory duplicate samples were not prepared for this sample set.

VALIDATION CRITERIA CHECKLIST

23. Were the following data relationships realistic and acceptable?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270), and the results were in agreement? No

Comments: Target analytes were not reported by more than one method in this data set, with the following exceptions.

Target analytes 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1-methylnaphthalene, 2-methylnaphthalene, hexachlorobutadiene, and naphthalene were reported by both Method 8260B and Method 8270C. 1,2-Dibromoethane was reported from analyses by both Method 8260B and 504.1. These analytes were reported as not detected by both methods, or one or both results were within 5 times the applicable reporting limit, with the following exception.

The analytes 1-methylnaphthalene, 2-methylnaphthalene, and naphthalene were detected in sample MKTF-18 by Methods 8260B and 8270C SIM at concentrations greater than 5 times the applicable reporting limit. Based on the differences between the findings, the 1-methylnaphthalene, 2-methylnaphthalene, and naphthalene results for sample MKTF-18 were assigned J/UJ qualifiers.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The total metals concentrations were greater than or equal to the dissolved fractions, with the following exceptions.

Sample ID	Analyte	Total Result	Dissolved Result	Reporting Limit	Units	RPD
MKTF-18	Barium	2.3	2.4	0.010 / 0.015	mg/L	4.3%
DUP 3-11-21	Boron	0.26	0.27	0.040 / 0.040	mg/L	3.8%
MKTF-18	Manganese	2.4	2.5	0.010 / 0.010	mg/L	4.1%
BW-48	Molybdenum	0.023	0.025	0.0080 / 0.0080	mg/L	8.3%
MKTF-18	Nickel	0.0036	0.0085	0.010 / 0.010	mg/L	81.0% ♦
Sample ID	Analyte	Total Result	Dissolved Result	Reporting Limit	Units	RPD
MKTF-47	Zinc	ND	0.0080	0.010 / 0.010	mg/L	----- ♦
MKTF-38	Zinc	ND	0.012	0.010 / 0.010	mg/L	----- ♦
MKTF-18	Zinc	ND	0.015	0.010 / 0.010	mg/L	----- ♦
EB 3-11-21	Zinc	ND	0.016	0.010 / 0.010	mg/L	----- ♦

----- *RPD could not be calculated.*

♦ *= One or both of the detections were less than 2 times the applicable reporting limits, and qualification of data was not required.*

The differences for the corresponding analytical results were within five times the applicable reporting limits and validation action was not required, or the RPDs between the results were less than 30% indicating that the data were within the measurement uncertainty for the methods, and qualification of results was not required based on the analytical inconsistencies.

FIELD DUPLICATE SUMMARY

Client Sample ID: MKTF-35 Field Duplicate Sample ID: DUP 3-11-21				
Analyte	**Method**	**Laboratory Result**	**Duplicate Result**	**Relative Percent Difference (RPD)**
Aluminum, Dissolved	**E 200.7**	**0.14 mg/L**	**0.10 mg/L**	**33.3%**

Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

The RPD values for multiple analytes exceeded the data validation limit of 30%, which was evidence of poor precision. These analyte results were qualified as J for samples MKTF-35 and DUP 3-11-21.

DATA QUALIFICATION SUMMARY

Abbreviation	Reason
pH-PR	Sample chemical preservation was not met.
HT-AN	Sample was analyzed outside of the method holding time.
MBD	Method blank detection
EBD	Equipment blank detection
LR-MS	The MS and/or MSD percent recovery was less than the lower acceptable limit indicating possible matrix interference.
HR-MS	The MS and/or MSD percent recovery was greater than the upper acceptable limit indicating possible matrix interference.
ERPD-MS	The MS/MSD RPD exceeded the upper acceptable limit indicating poor precision.
HR-LCS	The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias.
ERPD-LCS	The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision.
HR-SUR	The surrogate percent recovery was greater than the upper acceptable limit indicating a possible high bias.
ERPD-FD	High field duplicate RPD.
DATA-COMP	Analytical results for analyte by different methods did not meet comparability limits.
MDLRL	Flagged by the laboratory: The result was greater than the MDL but less than the RL.

Tier II Data Validation Report Summary

Client: Marathon Oil	Laboratory: Hall Environmental Analysis Laboratory
Project Name: Western Refining Southwest, Quarterly GW	Sample Matrix: Groundwater
Project Number: 697-080-002 Task: 0006	Sample Start Date: 06/17/2021
Date Validated: 02/23/2022	Sample End Date: 06/17/2021
Parameters Included: ▪ Volatile Organic Compounds (VOC) by Environmental Protection Agency (EPA) Test Methods for Evaluating Solid Waste (SW-846) Method 8260B ▪ 1,2-Dibromoethane (EDB) by EPA Method 504.1 ▪ Semivolatile Organic Compounds (SVOC) by SW-846 Methods 8270C and 8270C with Selective Ion Monitoring (SIM) ▪ Total Petroleum Hydrocarbons (TPH) Gasoline Range Organics (GRO) by SW-846 Method 8015D ▪ TPH Diesel Range Organics (DRO) and Motor Oil Range Organics (MRO) by SW-846 Method 8015D Modified ▪ Total and Dissolved Metals by EPA Methods 200.7 and 200.8 ▪ Total and Dissolved Mercury by EPA Method 245.1 ▪ Anions by EPA Method 300.0	
Laboratory Project ID: 2106976	
Data Validator: Daran O'Hollearn, Lead Project Scientist	
Reviewer: Mike Phillips, Senior Chemist	

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

Tier II Data Validation Report Summary

- Equipment blanks
- Field blanks
- Trip blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

Client Sample ID	Laboratory Sample Number
MKTF-2	2106976-001
MKTF-31	2106976-002
MKTF-25	2106976-003
MKTF-40	2106976-004
MKTF-11	2106976-005
EB 6/17/2021	2106976-006
FB 6/17/2021	2106976-007
DUP 6/17/2021	2106976-008
Trip Blank	2106976-009

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- ○ Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Equipment, Field, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ○ Laboratory Duplicates (Item 22)
- ✓ Data Relationships (Item 23)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, February 2021.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

Qualifier	Definition
J	Estimated concentration
J-	The result is an estimated concentration, but may be biased low
UJ	Estimated reporting limit
U	Evaluated to be undetected at the reporting limit
JB	Estimated concentration due to blank contamination
R	Rejected, data not usable

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 1,145 data points. The data completeness calculation does not include any submitted blank sample results. Twenty-six data points were rejected. The data completeness measure for this data package is calculated to be 97.73% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? Yes

Comments: The laboratory did not report non-conformances related to the analytical data for this sample set.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

D – Sample diluted due to matrix.

E – Value above quantitation range. *The application of this laboratory flag to QC sample results in the laboratory report did not require qualification.*

J – Analyte detected below quantitation limits.

R – % RPD outside of range.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

Method	Sample(s)	Analyte(s)	Dilution Factor
200.7	Multiple Samples	Select Dissolved and Total Metals	5
200.8	Multiple Samples	Select Dissolved and Total Metals	5
300.0	Multiple Samples	Select Anions	5
8015D	MKTF-2, MKTF-31	TPH GRO	5
8260B	MKTF-2, MKTF-31	VOCs	5
200.7	Multiple Samples	Select Dissolved and Total Metals	10
200.8	MKTF-40	Dissolved Arsenic and Selenium	10
8015D	MKTF-11, MKTF-25, DUP 6/17/2021	TPH GRO	10
8260B	MKTF-11, MKTF-25, DUP 6/17/2021	VOCs	10
8270C SIM	MKTF-11	SVOCs	10
200.7	MKTF-2, MKTF-11, DUP 6/17/2021	Select Total Metals	20
300.0	MKTF-2, MKTF-40, DUP 6/17/2021	Select Anions	20
8270C	MKTF-11	SVOCs	20
8260B	MKTF-2	Benzene	50
300.0	MKTF-31, MKTF-25	Chloride	50
200.7	MKTF-40	Sodium	50
8260B	MKTF-11, DUP 6/17/2021	Benzene	100
300.0	MKTF-11	Chloride	200
300.0	MKTF-2, MKTF-40, DUP 6/17/2021	Chloride	500

VALIDATION CRITERIA CHECKLIST

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? Yes

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC.

6. Were samples received in good condition within method-specified requirements? No

Comments: Samples were received on ice, in good condition, and with the cooler temperatures outside the recommended temperature range of 4°C ± 2°C at 7.5°C, 8.2°C, and 11.6°C as noted on the CoC and Sample Log-in Check List.

The cooler temperatures above 6°C were evaluated to be acceptable since the samples were received at the laboratory on the same day (within 24 hours) of the last sample collection time, and temperature equilibrium had not been established.

7. Were samples extracted/digested and analyzed within method-specified or technical holding times? Yes

Comments: The samples were extracted/digested and analyzed within method-specific holding times.

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. Yes

Comments: The results were reported in concentration units of micrograms per liter (µg/L) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.

9. Did the laboratory provide any specific initial and/or continuing calibration results? No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

Bis(2-ethylhexyl)phthalate and di-n-octyl phthalate were detected in the laboratory blank for Method 8270C batch 60820 at concentrations of 5.1 µg/L and 6.6 µg/L, respectively. Sample results detected below the blank concentration and/or the laboratory reporting limit were qualified with U flags. Non-detections of these analytes in the associated samples did not require qualification.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

Method	Analytes	Batch	MS Sample Source
200.7	Total Metals	60804	MKTF-31
200.7	Dissolved Metals	B79194	EB 6/17/2021
200.8	Total Metals	60804	MKTF-2

VALIDATION CRITERIA CHECKLIST

Method	Analytes	Batch	MS Sample Source
200.8	Dissolved Selenium	B79406	Not Prepared
200.8	Dissolved Metals	C79234	Not Prepared
200.8	Dissolved Metals	C79314	EB 6/17/2021
200.8	Dissolved Arsenic	C79446	Not Prepared
245.1	Total Mercury	60773	Not Prepared
245.1	Dissolved Mercury	61092	Not Prepared
245.1	Dissolved Mercury	61093	Not Prepared
300.0	Anions	R79216	EB 6/17/2021
300.0	Chloride	R79498	Not Prepared
504.1	EDB	60809	Not Prepared
8015D	DRO and MRO	60769	Not Prepared
8015D	GRO	G79410	MKTF-2
8260B	VOCs	R79410	MKTF-2
8270C SIM	SVOCs	60807	Not Prepared
8270C	SVOCs	60820	Not Prepared
8270C SIM	SVOCs	60889	Not Prepared

Not Prepared – Matrix spikes were not prepared for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The percent recoveries and RPDs for MS/MSDs prepared from project samples were within data validation and laboratory QC limits or were not applicable because the unspiked amount was more than four times the spike added.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

Method	Analyte	Batch	LCS Recovery	LCSD Recovery	LCS/LCSD QC Limits	LCS/LCSD RPD	RPD QC Limits
200.7	**Total Barium**	**60804**	**63.8%**	**----**	**70-130%**	**----**	**----**
200.8	**Dissolved Selenium**	**B79406**	**65.3%**	**----**	**70-130%**	**----**	**----**
8015D	**TPH DRO**	**60769**	**Acceptable**	**Acceptable**	**21.1-126%**	**21.3%**	**20%**

Total barium and dissolved selenium with LCS percent recoveries that were less than the lower laboratory QC limits were qualified as J- if detected and UJ if not detected in the associated samples due to evidence of potential low bias.

TPH DRO was detected in the associated samples. The TPH DRO results in the associated samples were qualified as J due to evidence of poor precision.

VALIDATION CRITERIA CHECKLIST

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

Method	Surrogate	Sample	Surrogate Recovery	QC Limits
8270C	**2-Fluorophenol**	**MKTF-2**	**0%**	**15-88.8%**
8270C	**Phenol-d_5**	**MKTF-2**	**0%**	**15-71.9%**
8270C	**2,4,6-Tribromophenol**	**MKTF-2**	**0%**	**15-97.4%**
8270C	**2-Fluorophenol**	**DUP 6/17/2021**	**0%**	**15-88.8%**
8270C	**2,4,6-Tribromophenol**	**DUP 6/17/2021**	**3.21%**	**15-97.4%**

Since Method 8270C surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. **Due to the surrogates recovering less than 10% in samples MKTF-2 and DUP 6/17/2021, the associated target analytes in the acid fractions that were not detected in samples MKTF-2 and DUP 6/17/2021 were qualified as R indicating rejected results, data not usable. The detected phenol results in samples MKTF-2 and DUP 6/17/2021 were qualified as J- due to these non-conformances.**

Since Method 8270 SIM surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the samples MKTF-2, MKTF-25, MKTF-11, and DUP 6/17/2021, and qualification of sample data was not required.

The SVOC results for sample MKTF-11 were not qualified based on the surrogate non-conformances in the Method 8270C analysis since the applied dilution of 20 times resulted in surrogate concentrations below routinely calibrated levels, and those results were deemed unreliable and possibly inaccurate.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB 6/17/2021, and one equipment blank sample, EB 6/17/2021, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were reported as not detected in the trip, field, and equipment blanks, with the exceptions listed in the following table.

Blank Sample ID	Method	Analyte	Concentration
Trip Blank	**8260B**	**Benzene**	**0.36 µg/L**
FB 6/17/2021	**8260B**	**2-Butanone**	**2.2 µg/L**
FB 6/17/2021	**8260B**	**Acetone**	**2.4 µg/L**
FB 6/17/2021	8260B	Benzene	0.30 µg/L
FB 6/17/2021	8260B	Bromodichloromethane	0.21 µg/L
FB 6/17/2021	**8260B**	**Toluene**	**0.26 µg/L**
EB 6/17/2021	**200.7**	**Total Potassium**	**0.16 mg/L**
EB 6/17/2021	200.7	Total Sodium	0.65 mg/L
EB 6/17/2021	**200.7**	**Dissolved Zinc**	**0.0094 mg/L**

VALIDATION CRITERIA CHECKLIST

Blank Sample ID	Method	Analyte	Concentration
EB 6/17/2021	300.0	Chloride	1.60 mg/L
EB 6/17/2021	300.0	Fluoride	0.13 mg/L
EB 6/17/2021	**300.0**	**Nitrate as N**	**0.080 mg/L**
EB 6/17/2021	**8015D**	**TPH DRO**	**0.026 mg/L**
EB 6/17/2021	**8015D**	**TPH GRO**	**0.030 mg/L**
EB 6/17/2021	**8260B**	**1,2,4-Trimethylbenzene**	**0.16 µg/L**
EB 6/17/2021	8260B	2-Butanone	8.3 µg/L
EB 6/17/2021	8260B	Acetone	6.4 µg/L
EB 6/17/2021	8260B	Benzene	0.78 µg/L
EB 6/17/2021	**8260B**	**Ethylbenzene**	**0.25 µg/L**
EB 6/17/2021	8260B	Toluene	0.29 µg/L
EB 6/17/2021	8260B	Total Xylenes	0.80 µg/L
EB 6/17/2021	8270C	Bis(2-ethylhexyl)phthalate	4.6 µg/L
EB 6/17/2021	8270C	Di-n-octylphthalate	6.5 µg/L

Detections of the identified analytes in the associated samples that were less than or equal to the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of the identified analytes in the associated samples that were greater than or equal to the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

The bis(2-ethylhexyl)phthalate and di-n-octylphthalate results for the samples in batch 60820 were previously qualified due to laboratory blank contamination; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP 6/17/2021 was collected as a field duplicate of sample MKTF-2.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exception.

The RPD value for total aluminum exceeded the data validation limit of 30% at 31.9%, which was evidence of poor precision. The total aluminum results were qualified as J for samples MKTF-2 and DUP 6/17/2021.

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? N/A

Comments: Laboratory duplicate samples were not prepared for this sample set.

VALIDATION CRITERIA CHECKLIST

23. Were the following data relationships realistic and acceptable?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270), and the results were in agreement? Yes

Comments: Target analytes were not reported by more than one method in this data set, with the following exceptions.

Target analytes 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1-methylnaphthalene, 2-methylnaphthalene, hexachlorobutadiene, and naphthalene were reported by both Method 8260B and Method 8270C. 1,2-Dibromoethane was reported from analyses by both Method 8260B and 504.1. These analytes were reported as not detected by both methods, or one or both results were within 5 times the applicable reporting limit, and qualification of data was not required.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The total metals concentrations were greater than or equal to the dissolved fractions, with the following exceptions.

Sample ID	Analyte	Total Result	Dissolved Result	Reporting Limit	Units	RPD

----- *RPD could not be calculated.*

♦ = *One or both of the detections were less than 2 times the applicable reporting limits, and qualification of data was not required.*

The differences for the corresponding analytical results were within five times the applicable reporting limits and validation action was not required, or the differences between the results were less than 30% indicating that the data were within the measurement uncertainty for the methods and qualification of results was not required based on the analytical inconsistencies.

FIELD DUPLICATE SUMMARY

Client Sample ID: MKTF-2 Field Duplicate Sample ID: DUP 6/17/2021				
Analyte	**Method**	**Laboratory Result**	**Duplicate Result**	**Relative Percent Difference (RPD)**

Pyrene	SW8270C	0.26 µg/L	0.28 µg/L	7.4% +/-RL

Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

The RPD value for total aluminum exceeded the data validation limit of 30% at 31.9%, which was evidence of poor precision. The total aluminum results were qualified as J for samples MKTF-2 and DUP 6/17/2021.

DATA QUALIFICATION SUMMARY

Abbreviation	Reason
EBD	Equipment blank detection
ERPD-FD	High field duplicate RPD.
ERPD-LCS	The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision.
FBD	Field blank detection
LR-LCS	The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias.
LR-SUR	The surrogate percent recovery was less than the lower acceptable limit indicating a possible low bias.
MBD	Method blank detection
MDLRL	Flagged by the laboratory: The result was greater than the MDL but less than the RL.
TBD	Trip blank detection

Tier II Data Validation Report Summary

Client: Marathon Oil	Laboratory: Hall Environmental Analysis Laboratory
Project Name: Western Refining Southwest, Quarterly GW	Sample Matrix: Groundwater
Project Number: 697-080-001 Task 0016	Sample Start Date: 09/15/2021
Date Validated: 12/09/2021	Sample End Date: 09/15/2021
Parameters Included: ▪ Volatile Organic Compounds (VOC) by Environmental Protection Agency (EPA) Test Methods for Evaluating Solid Waste (SW-846) Method 8260B ▪ 1,2-Dibromoethane (EDB) by EPA Method 504.1 ▪ Semivolatile Organic Compounds (SVOC) by SW-846 Methods 8270C and 8270C with Selective Ion Monitoring (SIM) ▪ Total Petroleum Hydrocarbons (TPH) Gasoline Range Organics (GRO) by SW-846 Method 8015D ▪ TPH Diesel Range Organics (DRO) and Motor Oil Range Organics (MRO) by SW-846 Method 8015D Modified ▪ Total and Dissolved Metals by EPA Methods 200.7 and 200.8 ▪ Total and Dissolved Mercury by EPA Method 245.1 ▪ Anions by EPA Method 300.0	
Laboratory Project ID: 2109786	
Data Validator: Kyle Power, Environmental Chemist	
Reviewer: Charles Ballek, Senior Chemist	

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blank
- Equipment blank

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

Client Sample ID	Laboratory Sample Number
EB-09-15-21	2109786-001
MKTF-10	2109786-002
MKTF-11	2109786-003
MKTF-27	2109786-004
MKTF-28	2109786-005
MKTF-29	2109786-006
MKTF-30	2109786-007
FB-09-15-21	2109786-008
DUP-09-15-21	2109786-009
Trip Blank	2109786-010
Trip Blank-2	2109786-011

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- ○ Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ✓ LCS/LCSD (Items 15 and 16)
- ✓ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicate (Items 20 and 21)
- ○ Laboratory Duplicates (Item 22)
- ⊗ Data Relationships (Item 23)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, February 2021.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

Qualifier	Definition
J	Estimated concentration
UJ	Estimated reporting limit
U	Evaluated to be undetected at the reporting limit
JB	Estimated concentration due to blank contamination

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 1,329 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST	
1. Was the report free of non-conformances identified by the laboratory?	Yes
Comments: The laboratory did not identify non-conformances regarding the analytical data.	
2. Were the data free of data qualification flags and/or notes used by the laboratory? If no, define.	No
Comments: The laboratory used the following data qualification flags with this data set. D – Sample diluted due to matrix J – Analyte detected below quantitation limits S – % Recovery outside of range due to dilution or matrix * – Value exceeds Maximum Contaminant Level	
3. Were sample CoC forms and custody procedures complete?	Yes
Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times.	
4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable?	Yes
Comments: The detection limits appeared to be acceptable. The following dilutions were applied. Method 8260B: Dilutions of 10 and 100 times were applied for the VOC analysis of samples MKTF-10 and MKTF-11. Method 8270C: Dilutions of 10 times were applied for the SVOC analyses of samples MKTF-10 and MKTF-11. Method 8270C SIM: A dilution of 10 times was applied for the analysis of anthracene in sample MKTF-10. Method 8015D (GRO): Dilutions of 10 times were applied for the TPH GRO analysis of samples MKTF-10 and MKTF-11. Method 200.7: Dilutions of 5 to 20 times were applied for the metals analyses of select samples. Method 300.0: Dilutions of 5 to 200 times were applied for the analyses of anions for the samples.	
5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC?	Yes
Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC.	
6. Were samples received in good condition within method-specified requirements?	No
Comments: Samples were received on ice, in good condition, and with the cooler temperatures outside the recommended temperature range of 4°C ± 2°C between 10.2°C and 11.9°C as noted on the *Sample Log-in Check List*. The cooler temperatures above 6°C were evaluated to be acceptable since the samples were received at the laboratory on the same day (within 24 hours) of the last sample collection time, and temperature equilibrium had not been established.	
7. Were samples extracted/digested and analyzed within method-specified or technical holding times?	Yes
Comments: The samples were extracted/digested and/or analyzed within method-specific holding times.	
8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil.	Yes
Comments: The results were reported in concentration units of micrograms per liter (µg/L) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.	
9. Did the laboratory provide any specific initial and/or continuing calibration results?	No
Comments: Initial and continuing calibration data were not included as part of this data set.	

VALIDATION CRITERIA CHECKLIST

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

Method 8015D (DRO/MRO): **Analyte TPH DRO was detected in the method blank sample from batch 62658 at 0.034 mg/L. Detections of TPH DRO in the associated samples that were less the reporting limits were qualified as U. Results greater than the blank detection but less than or equal to 10 times the blank concentration were qualified as JB.** Results of TPH DRO in the associated samples greater than 10 times the blank detection did not require qualification.

Method 200.8: Dissolved iron was detected in the method blank for batch B81329 at a concentration of 0.014 mg/L. Qualification of sample results was not required as dissolved iron was not detected in the associated samples.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batch. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

Method	Analytes	Batch	MS Sample Source
200.7	Dissolved Metals	A81359	Not Prepared
200.7	Total Metals	62771	Not Prepared
200.7	Dissolved Metals	B81329	Not Prepared
200.7	Dissolved Metals	B81434	Not Prepared
200.8	Total Metals	62771	MKTF-41
200.8	Dissolved Metals	B81374	Not Prepared
200.8	Dissolved Metals	C81396	Not Prepared
245.1	Mercury	62684	Not Prepared
300.0	Anions	R81351	MKTF-10
300.0	Chloride	A81455	Not Prepared
504.1	EDB	62680	Not Prepared
8015D	TPH DRO and MRO	62658	Not Prepared
8260B	VOC	R81355	Not Prepared
8260B	VOC	R81384	Not Prepared
8260B	VOC	R81542	Not Prepared
8270C	SVOC	62647	Not Prepared
8270C SIM	SVOC	62617	Not Prepared
8015D	GRO	R81355	Not Prepared
8015D	GRO	R81384	Not Prepared
8015D	GRO	R81542	Not Prepared

Not Prepared – Matrix spikes were not prepared/reported for this batch.

VALIDATION CRITERIA CHECKLIST	
14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits?	Yes
Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation and laboratory QC limits.	
15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method?	Yes
Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.	
16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits?	Yes
Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within laboratory QC limits.	
17. Were surrogate recoveries within laboratory QC limits?	No
Comments: Surrogate recoveries were within laboratory QC limits or were not applicable because the surrogate was diluted out, with the following exceptions. Method 8270C: The surrogate recoveries for 2-fluorophenol from samples MKTF-10 and MKTF-11 were outside laboratory QC limits of 15-87% both at 0%. Qualification of sample results was not required based on the 2-fluorophenol recovery as two out of the three surrogates for Method 8270C for samples MKTF-10 and MKTF-11 were within laboratory QC limits. Method 8270C SIM: The surrogate recovery for 4-terphenyl-d_{14} from sample EB-09-15-21 was outside laboratory QC limits of 73.1-152% at 65.5%. Qualification of sample results was not required based on the 4-terphenyl-d_{14} recovery as three out of the four surrogates for Method 8270 SIM for sample EB-09-15-21 were within laboratory QC limits.	
18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit?	Yes
Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. Two trip blank samples, Trip Blank and Trip Blank-2, one field blank sample, FB-09-15-21, and one equipment blank sample, EB-09-15-21, were collected as part of this sample set.	

VALIDATION CRITERIA CHECKLIST

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were reported as not detected in the trip, field, and equipment blanks, with the exceptions listed in the following table.

Blank Sample ID	Method	Analyte	Concentration
EB-09-15-21	8260B	Acetone	3.5 µg/L
EB-09-15-21	8260B	Styrene	0.15 µg/L
EB-09-15-21	8015D	TPH DRO	0.063 mg/L
EB-09-15-21	8270C	Benzyl Alcohol	3.8 µg/L
EB-09-15-21	**300.0**	**Nitrate**	**0.055 mg/L**
EB-09-15-21	200.7	Beryllium, Dissolved	0.0016 mg/L
EB-09-15-21	**200.7**	**Zinc, Dissolved**	**0.0078 mg/L**
FB-09-15-21	**8260B**	**2-Butanone**	**2.4 µg/L**
FB-09-15-21	**8260B**	**Acetone**	**3.9 µg/L**

Detections of nitrate, dissolved zinc, 2-butanone, and acetone in the associated samples that were less than the reporting limits were qualified as U. Dissolved zinc results that were greater than the blank detection but less than 10 times the blank concentration were qualified as JB.

Non-detections of the identified analytes in the associated samples and results greater than 10 times the blank detections did not require qualification.

Qualification was not required for TPH DRO as it was previously qualified for method blank contamination.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP-09-15-21 was collected as a field duplicate of sample MKTF-27.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exceptions.

The RPD value for dissolved zinc greatly exceeded the data validation QC limit for samples MKTF-27 and DUP-09-15-21 at 109.7%. Dissolved zinc was qualified as J and UJ for the associated samples due to evidence of extreme poor precision (RPD greater than 100%).

The RPD values for several analytes exceeded the data validation QC limit of 30%, which was evidence of poor precision. The affected analytes were qualified as J for samples MKTF-27 and DUP-09-15-21.

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? N/A

Comments: Laboratory duplicate samples were not prepared/reported for this sample set.

VALIDATION CRITERIA CHECKLIST

23. Were the following data relationships realistic and acceptable?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270), and the results were in agreement? Yes

Comments: Target analytes were not reported by more than one method in this data set, with the following exceptions.

Target analytes 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1-methylnaphthalene, 2-methylnaphthalene, hexachlorobutadiene, and naphthalene were reported by both Method 8260B and Method 8270D. 1,2-Dibromoethane was reported by both Method 504.1 and 8260B. These analytes were reported as not detected by both methods, with the following exceptions.

Sample	Analyte	Method 8260B (µg/L)	Method 8270D (µg/L)	Difference (µg/L)	Reporting Limits (µg/L) 8260B/8270D	RPD
MKTF-10	1-Methylnaphthalene	62	42	20	40 / 1	38.5% ◄
MKTF-11	1-Methylnaphthalene	12	6.2	5.8	40 / 1	63.7% ◄
MKTF-10	**2-Methylnaphthalene**	**110**	**68**	**42**	**40 / 1**	**47.2%**
MKTF-11	2-Methylnaphthalene	16	8	8	40 / 1	66.7% ◄
MKTF-10	**Naphthalene**	**180**	**110**	**70**	**20 / 1**	**48.3%**
MKTF-11	**Naphthalene**	**46**	**21**	**25**	**20 / 1**	**74.6%**

◄ = *One or both results were within 2 times the applicable reporting limits and qualification of data was not required.*

The analytical results for target analytes from both Method 8260B and Method 8270D were within the RPD limit of 30% indicating that the results were comparable, and qualification of the data was not required, with the exceptions listed above. **These results were qualified as J to indicate estimated concentrations due to poor precision.**

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The total metals concentrations were greater than or equal to the dissolved fractions, with the following exceptions.

Sample ID	Analyte	Total Result	Dissolved Result	Reporting Limit	Units	RPD
MKTF-11	Antimony	ND	0.0010	0.0010	mg/L	----- ♦
MKTF-30	Antimony	ND	0.00047	0.0010	mg/L	----- ♦
MKTF-11	Barium	4.9	5.1	0.020	mg/L	4.0%
EB-09-15-21	Beryllium	ND	0.0016	0.0020	mg/L	----- ♦
DUP-09-15-21	Cobalt	0.0026	0.0039	0.0060	mg/L	40.0% ♦
MKTF-27	Cobalt	0.0028	0.0030	0.0060	mg/L	6.9% ♦
MKTF-28	Cobalt	0.0042	0.0057	0.0060	mg/L	30.3% ♦
MKTF-29	Cobalt	0.0055	0.0062	0.0060	mg/L	12.0% ♦
MKTF-30	Cobalt	0.0031	0.0038	0.0060	mg/L	20.3% ♦
MKTF-29	Manganese	4.7	4.8	0.020	mg/L	2.1%
DUP-09-15-21	Molybdenum	ND	0.0060	0.0080	mg/L	----- ♦
MKTF-11	Molybdenum	0.013	0.015	0.0080	mg/L	14.3% ♦
MKTF-27	Molybdenum	ND	0.0060	0.0080	mg/L	----- ♦
DUP-09-15-21	**Zinc**	**ND**	**0.048**	**0.010**	**mg/L**	**-----**
EB-09-15-21	Zinc	ND	0.0078	0.010	mg/L	----- ♦

VALIDATION CRITERIA CHECKLIST

Sample ID	Analyte	Total Result	Dissolved Result	Reporting Limit	Units	RPD
MKTF-11	Zinc	ND	0.0070	0.010	mg/L	----- ♦
MKTF-27	Zinc	ND	0.014	0.010	mg/L	----- ♦
MKTF-28	Zinc	ND	0.014	0.010	mg/L	----- ♦
MKTF-29	Zinc	ND	0.0077	0.010	mg/L	----- ♦
MKTF-30	**Zinc**	**0.0074**	**0.038**	**0.010**	**mg/L**	**134.8%**

♦ = *Both of the detections were less than 2 times the applicable reporting limits and qualification of data was not required.*

The analytical results greater than 2 times the applicable RLs for total and dissolved metals fractions were within the RPD limit of 30% indicating that the results were comparable, and qualification of the data was not required, with the exceptions noted above. **The results for total and dissolved zinc in sample MKTF-30 were qualified as J due to poor precision.**

An RPD value could not be calculated for total and dissolved zinc because the total fraction was not detected in sample DUP-09-15-21. As the detection of dissolved zinc was greater than two times the reporting limits in the identified sample, the dissolved and total zinc results were qualified as J and UJ, respectively.

FIELD DUPLICATE SUMMARY

Client Sample ID: MKTF-27 Field Duplicate Sample ID: DUP-09-15-21

Client Sample ID: MKTF-27 Field Duplicate Sample ID: DUP-09-15-21				
Analyte	**Method**	**Laboratory Result**	**Duplicate Result**	**Relative Percent Difference (RPD)**
Nitrogen, Nitrate	300.0	0.31 mg/L	0.32 mg/L	3.2% +/-RL
Sulfate	300.0	150 mg/L	150 mg/L	0.0%

Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

The RPD value for dissolved zinc greatly exceeded the data validation QC limit and the results were qualified as J and UJ for the associated samples due to evidence of extremely poor precision (RPD greater than 100%).

The RPD values for several analytes exceeded the data validation QC limit and were qualified as J for samples MKTF-27 and DUP-09-15-21 due to evidence of poor precision.

DATA QUALIFICATION SUMMARY

Abbreviation	Reason
MBD	Method blank detection
FBD	Field blank detection
EBD	Equipment blank detection
ERPD-FD	High field duplicate RPD.
DATA-COMP	Analytical results for analyte by different methods did not meet comparability limits.
DIS-TOT	Dissolved metals concentration was greater than the associated total metals result
MDLRL	Flagged by the laboratory: The result was greater than the MDL but less than the RL.
