RE: Hydrocarbon Seep Interim Measures 2022 First Quarter Status Report
Western Refining Southwest LLC
(dba Marathon Gallup Refinery)
EPA ID# NMD000333211

Dear Mr. Pierard,

Please find enclosed the Hydrocarbon Seep Interim Measures Status Report for the first quarter of 2022 for the Marathon Gallup Refinery. If you have any questions or comments regarding the information contained herein, please do not hesitate to contact John Moore at (505) 879-7643.

Certification

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision according to a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Sincerely,
Western Refining Southwest LLC, Marathon Gallup Refinery

Ruth A Cade

**QUARTERLY STATUS REPORT
HYDROCARBON SEEP INTERIM MEASURES
WESTERN REFINING SOUTHWEST LLC
D/B/A MARATHON GALLUP REFINERY
1st Quarter 2022**

This document provides the 1st Quarter 2022 Status Report for Interim Measures (IM) activities associated with the Hydrocarbon Seep Area at Western Refining Southwest LLC, D/B/A Marathon Gallup Refinery (MGR), Gallup, New Mexico. Presented below are summaries of specific activities related to source control of the Hydrocarbon Seep Area, monthly fluid levels readings, and withdrawal of separate phase hydrocarbon (SPH) and associated groundwater. In addition, this document presents fluid recovery information from the marketing tank farm (MKT) wells in the area of the truck loading rack release as well as summaries of recovery efforts in the area of the Borrow Pit Sumps.

Hydrocarbon Seep Source Control

The refinery has remained in indefinite idle status since April 2020. Refinery resources and personnel were operating at a reduced capacity and have focused on facility maintenance during the 1st quarter of 2022. Activities and observations of note for the Hydrocarbon Seep Area include:

- There were 14,200 gallons (gals) of water and no measurable SPH recovered from the standpipe sumps (S1 – S6) during the 1st quarter.
- There was no recovery from the retention ditch during this quarter as there was no standing water.

The Hydrocarbon Seep Area is shown on Figure 1. Standpipe and retention ditch data are presented in Tables 1A and 1B.

Monthly Fluid Levels

Monthly fluid level data for the MKTF and refinery areas are found in Tables 2A and 2B. Compared to the 4th quarter of 2021, there was no notable change in fluid level trends in MKTF wells upgradient and in the vicinity of the Hydrocarbon Seep area, with most fluid levels fluctuating between +/- 0.25 feet (ft). The exceptions are MKTF-11 which increased by 0.56 ft and MKTF-20 and MKTF-21 which were both dry this quarter.

Fluid Recovery

Fluid recovery in MKTF wells upgradient of the Hydrocarbon Seep Area, with recoverable SPH, continued during the 1st Quarter of 2022 using a vacuum truck. A total of 252 gals of water and 38 gals of SPH were extracted in the 1st Quarter. The SPH extraction data are shown in Tables 3A through 3F. As requested in Comment 2 in NMED's *Approval with Modifications Hydrocarbon Seep Interim Measures 2020 Fourth Quarter Status Report*, dated March 30, 2021, fluid levels are taken 24 hours after vacuum truck extractions and are presented in Tables 3A through 3F.

Surface Observations

Pursuant to NMED's letter on March 5, 2019, the Hydrocarbon Seep Area is routinely monitored to evaluate the discharge of hydrocarbons to the land surface where shallow water discharges have been

observed within the retention ditch and to the south near the original seep location. The measurable amount of SPH discharging into the retention ditch has essentially stopped. MGR will continue to monitor the area and if substantial fluid returns, it will be recovered.

As requested by NMED in comment 5 from *Disapproval Marketing Tank Farm Laser-Induced Fluorescence/Hydraulic Profiling Investigation Report*, dated June 2, 2021, the water seep near the 90-day pad is monitored monthly for indications of SPH (Figure 2). The water seep area was inspected each month in the 1st quarter and was found to be dry and had no evidence of SPH.

Borrow Pit Activities

Five sumps and two piezometers were installed in the Borrow Pit west of the Truck Loading Rack after a gasoline seep was found in the area (Figure 2). Vacuum truck fluid recovery from these sumps began on May 10, 2021. An additional 3 sumps and an additional 2 piezometers were installed in January 2022 (Figure 2). Fluid recovery from the additional sumps, S-6, S-7, and S-8, began on January 10, 2022. Fluid recovery from all the sumps is conducted four days a week, weather permitting. Sumps S-1, S-2, and S-3 have contained measurable SPH since installation on April 16, 2021. The additional sumps, S-6 and S-7, and piezometers, PZ-3 and PZ-4, have contained measurable SPH since installation on January 24, 2022. Other sumps and the piezometers did not contain measurable SPH immediately after installation. SPH was first detected in S-4 and S-5 in September 2021 (Table 4A). SPH in S-4 has stabilized and stopped increasing during the 1st quarter of 2022. SPH thickness in S-5 has been limited to a film (0.01 ft thickness) during the 4th quarter of 2021, and not been detected during the 1st quarter 2022. No SPH has been detected in PZ-1 or PZ-2 since installation. An estimated total of 403 gals of SPH and 1,943 gals of water were recovered in the 1st quarter (Table 4B). Prior to November 23, 2021, fluid recovery estimates were based on sump depths, widths, and fluid level data. Since November 23, 2021, the recovered fluids are stored in a tote and measured once a week for improved accuracy in measuring recovered fluid volumes.

2nd Quarter 2022 IM Activities

Following is a list of activities that are associated with ongoing IM activities to be completed in the 2nd Quarter 2022.

Monitoring - Monthly groundwater gauging will continue through 2022. The water seep near the 90-day pad will be monitored for SPH monthly.

Hydrocarbon Seep Area - Source Control - MGR will continue recovery operations at the standpipe sumps and the retention ditch using a vacuum truck to pump SPH and water from each of the sumps and the downstream retention ditch (when fluid is present in the retention ditch). The fluid volumes in the standpipe sumps and retention ditch will continue to be monitored and recovery efforts will be adjusted as necessary.

Borrow Pit Seep Area - Recovery operations will continue in the borrow pit sumps, including the additional sumps, at a rate of four times per week (weather permitting).

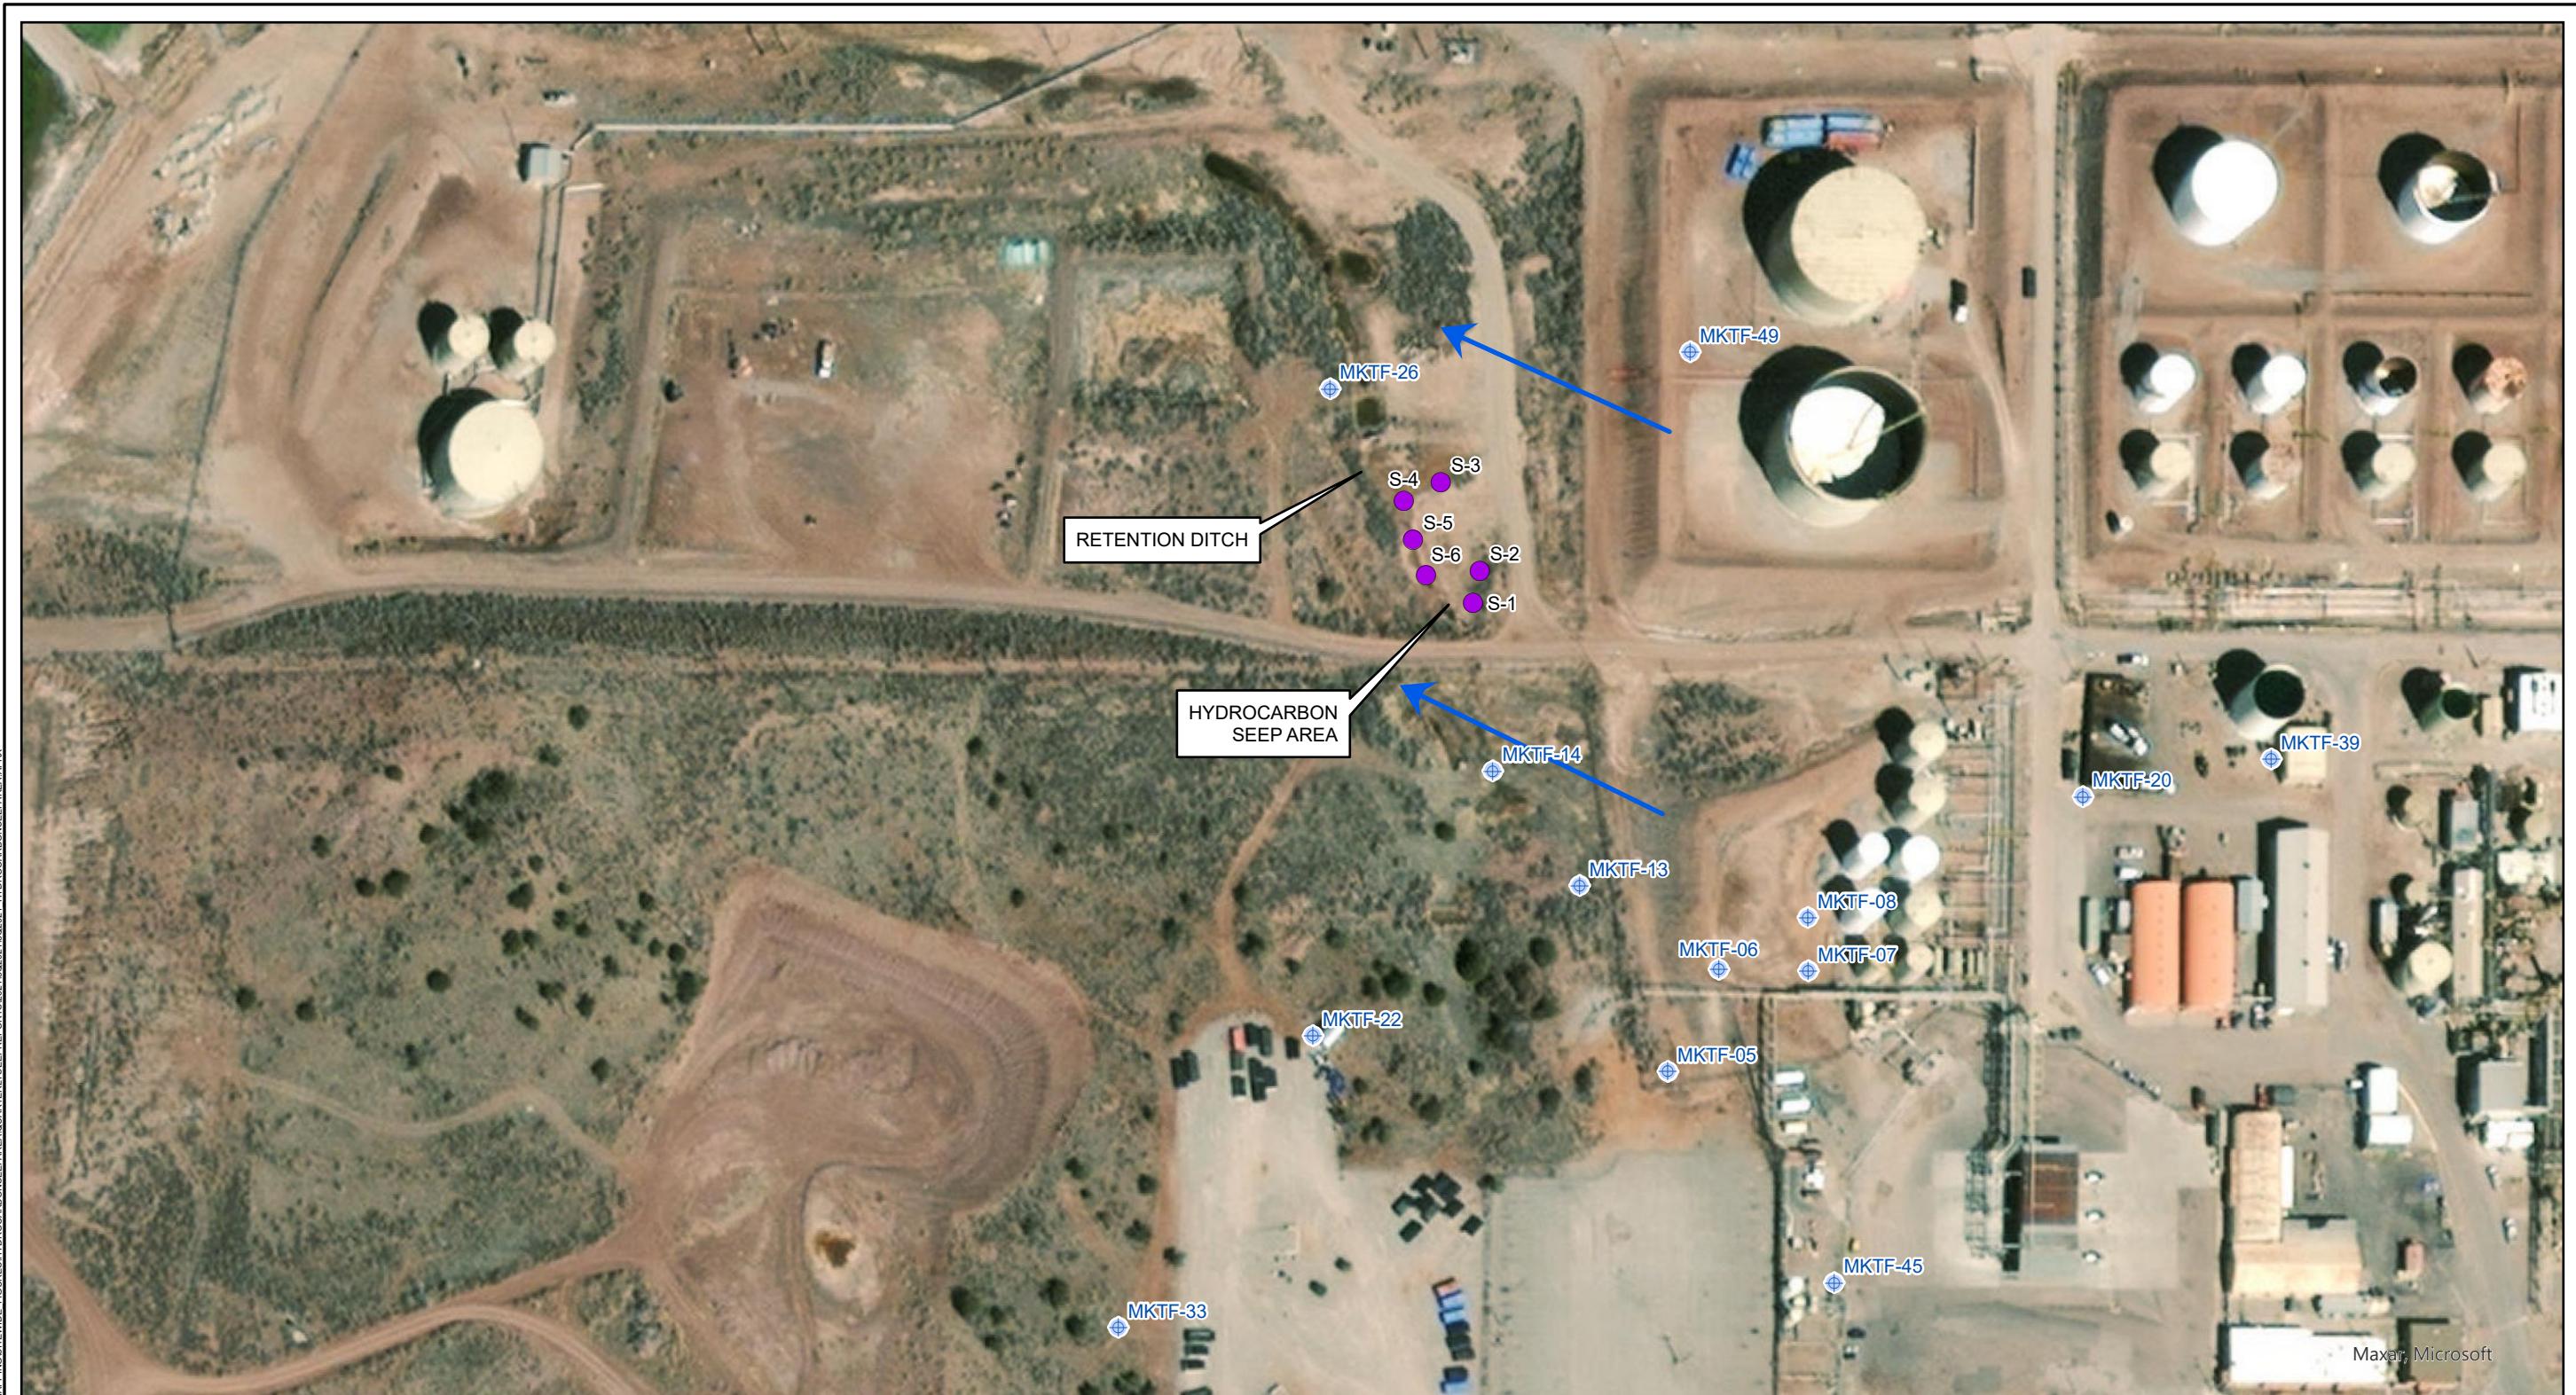

Sanitary Lagoon Investigation

The Sanitary Lagoon Investigation Phase II was complete on September 19th, 2021 (Figure 3). The investigation report was submitted to NMED on March 11, 2022.

Investigations – The following investigative activities that pertain to seeps and releases in the area of the Hydrocarbon Seep area are expected to be scheduled for 2022, pending approval of work plans.

- **Sour Naphtha Investigation** - The Sour Naphtha Investigation Work Plan (IWP) was submitted to NMED on September 28, 2021, to investigate the extent of impacts from the March 26, 2017, sour naphtha release. NMED's *Disapproval Sour Naphtha Release Investigation Work Plan* was received on November 23, 2021. The response to disapproval comments and revised work plan were submitted to NMED on February 4, 2022. Pending NMED approval, the Sour Naphtha Investigation will be conducted during the 2nd quarter 2022.
- **The Heat Exchanger Bundle Pad** – The Heat Exchanger Bundle Pad Investigation will be conducted to determine the source of benzene exceedances found in MKTF-16. The Heat Exchanger Bundle Pad Investigation Work Plan Response to Comments was submitted to NMED on March 11, 2022. Pending NMED approval, the investigation will be conducted during the 2nd quarter 2022.
- **AOC 35** - An IWP for Area of Concern (AOC) 35, which includes the area around the Marketing Tanks and the Truck Loading Racks, was approved with modifications on September 12, 2019. However, this investigation was postponed for revision due to the gasoline leak in the Truck Loading area found on October 27, 2019. The revised AOC 35 IWP Number 2 was submitted to NMED on September 1, 2021. NMED's *Disapproval Revised Investigation Work Plan No. 2 Area of Concern 35* was received on October 20, 2021. The revised IWP and response to disapproval comments will be submitted to NMED by April 31, 2022.

Notes:

¹ = Corrected water table elevation calculation = (SPH thickness x 0.8) + ground water elevation

ft = feet

SPH = separate phase hydrocarbon

NA = Not applicable

ND = Not detected

NM = Not Measured

Depth to Water Column - if 0.00 is indicated - means water is at top of casing (full) under artesian flow conditions.

Dry indicates no fluid was detected

Notes:

¹ = Corrected water table elevation calculation = (SPH thickness x 0.8) + ground water elevation

ft = feet

SPH = separate phase hydrocarbon

NA = Not Applicable

ND = Not detected

NM = Not Measured

Depth to Water Column - if 0.00 is indicated - means water is at top of casing (full) under artesian flow conditions

Dry indicates no fluid was detected

(5/10/21-12/22/21)

Notes:

w- week NA - not applicable

NM - not measured

gal - gallons

ND - not detected

ft - feet

Total depth of sumps:

S-1 = 10.4 ft, S-2 = 8 ft, S-3 = 8 ft, S-4 = 8 ft, S-5 = 8 ft

*estimated gal/day based on fluid levels from 5/10/21 through 11/23/21. After 11/23/21, total fluids were placed in a tote and calculated weekly, 1 inch = 7.4 gal
