RE: Hydrocarbon Seep Interim Measures 2023 Second Quarter Status Report  
Western Refining Southwest LLC (D/B/A Marathon Gallup Refinery)  
EPA ID# NMD000333211

Dear Mr. Cobrain:

Western Refining Southwest LLC, D/B/A Marathon Gallup Refinery (Refinery), Gallup, New Mexico is submitting this "Hydrocarbon Seep Interim Measures Status Report" for the second quarter of 2023. This document provides the status for quarterly Interim Measures (IM) activities associated with the Hydrocarbon Seep Area and separate phase hydrocarbon (SPH) and monitoring well activities throughout the Refinery as requested by the New Mexico Environment Department (NMED) in Comment 22 of "Disapproval, Interim Measures Report" dated April 26, 2016. Presented below are summaries of specific activities related to source control of the Hydrocarbon Seep Area (Figure 1), Borrow Pit Sumps (Figure 2), monthly fluid levels readings, and withdrawal of separate phase hydrocarbon (SPH) and associated groundwater in the marketing tank farm (MKT) and non-MKT areas. This document presents fluid recovery information from the groundwater recovery system in the Hydrocarbon Seep area, Borrow Pit Sumps, and the French Drain (Figure 3).

**Hydrocarbon Seep Area Source Control**

The refinery has remained in indefinite idle status since April 2020. Refinery resources and personnel were operating at a reduced capacity and have focused on facility maintenance during the 2<sup>nd</sup> quarter of 2023. The groundwater extraction system began operation on March 1, 2023. The amount of SPH recovered is not quantified with the groundwater system therefore total fluid volumes are reported. The Hydrocarbon Seep Area is within the groundwater recovery capture zone. Activities and observations of note for the Hydrocarbon Seep Area include:

- There were approximately 173,633 gallons (gals) of total fluids recovered from the Hydrocarbon Seep Area standpipe sumps (S-1 – S-6) (Figure 1) using the groundwater extraction system during 2<sup>nd</sup> quarter of 2023 (Table 1A). No SPH was measured or observed. There is evidence of dissolved phase hydrocarbons in the recovered fluid.

Mr. Dave Cobrain  
July 26, 2023  
Page 2

- There were approximately 8,724 gals of fluid recovered in the French Drain area (Figure 3) using the groundwater extraction system during 2<sup>nd</sup> quarter of 2023 (Table 1B).
- There was no fluid recovery from the retention ditch during the 2<sup>nd</sup> quarter because there was no standing fluid (Table 1C and Figure 1).

### Borrow Pit Activities

Five sumps (BPS-1 through BPS-5) and two piezometers (PZ-1 and PZ-2) were installed in the Borrow Pit west of the Truck Loading Rack after a gasoline seep was observed in the area in 2020 (Figure 2). Vacuum truck fluid recovery from these sumps began on May 10, 2021. An additional 3 sumps (BPS-6 through BPS-8) and an additional 2 piezometers (PZ-3 and PZ-4) were installed in January 2022. Vacuum truck fluid-recovery from the additional sumps, BPS-6, BPS-7, and BPS-8, began on January 10, 2022.

The groundwater extraction system began fluid recovery in wells BPS-1, BPS-2, BPS-3, BPS-4, BPS-5, and BPS-8 at the Borrow Pit on March 7, 2023. On June 26 and June 27, 2023, BPS-6 and BPS-7 were re-drilled deeper in order to install pumps into the sumps, respectively. It is anticipated that pumps will be installed in BPS-6 and BPS-7 during the 3<sup>rd</sup> quarter. Fluid recovery from the sumps transitioned from vacuum truck recovery to recovery using the groundwater system during the 1<sup>st</sup> quarter 2023. The extraction pumps were manually operated one to three times a day, four days a week, weather permitting from March 7, 2023, to May 31, 2023. Starting May 31, 2023, the extraction pumps were automated pumping each well approximately 24 times per day. On average, SPH thickness decreased in all sumps and piezometers during the second quarter (Table 2A) except for BPS-7 which increased slightly.

Sumps BPS-1, BPS-2, and BPS-3 have contained measurable SPH since installation on April 16, 2021. The additional sumps, BPS-6 and BPS-7, and piezometers, PZ-3, and PZ-4, have contained measurable SPH since installation on January 24, 2022. SPH was first detected in BPS-4 and BPS-5 in September 2021. SPH was detected in BPS-5 on November 8, 2022, after not containing measurable product for a year at a maximum thickness of 0.05 ft. SPH was first detected in BPS-8 on February 8, 2022. No SPH has been detected in PZ-1 or PZ-2 since installation.

An estimated total of 17,322 gals of SPH and 37,201 gals of water were recovered by the groundwater extraction system (Table 2B). The total fluid volume recovered from the borrow pit groundwater recovery system is estimated based on sump depths, widths, water and SPH fluid levels, and pump starts.

Surface hydrocarbon staining was observed near BPS-2 and BPS-3 on April 24, 2023. The Refinery will continue to monitor the hydrocarbon staining in the Borrow Pit. Automated extraction is expected to continue to reduce the thickness of SPH in the groundwater and reduce daylighting hydrocarbon.

Mr. Dave Cobrain  
July 26, 2023  
Page 3

### Surface Discharge Observations

Pursuant to NMED's letter on March 5, 2019, the Hydrocarbon Seep Area is routinely monitored to evaluate the discharge of hydrocarbons to the land surface where shallow water seeps have been observed within the retention ditch and to the south near the original seep location. The measurable amount of SPH seeping into the retention ditch has essentially stopped. The Refinery will continue to monitor the area and if standing fluid returns, it will be recovered.

As requested by NMED in Comment 5 from "Disapproval Marketing Tank Farm Laser-Induced Fluorescence/Hydraulic Profiling Investigation Report", dated June 2, 2021, the water seep near the 90-day pad is visually inspected monthly for SPH (Figure 2). The water seep area was inspected each month in the 2<sup>nd</sup> quarter and was found to be dry and had no visual evidence of SPH.

### Monthly Fluid Levels

Monthly fluid level data for the MKTF and refinery areas are presented in Tables 3A and 3B. Compared to the 1<sup>st</sup> quarter of 2023, there was less than a foot of water level change (increasing or decreasing) in the majority of monitored wells with a trend in decreasing water level. The following wells had greater than a foot of water level decrease: MKTF-03, MKTF-10, and MKTF-13, KA-3, NAPIS-2, NAPIS-3, OW-57, OW-58, OW-58A, OW-61, OW-63, OW-66, OW-65, MKTF-04R, MKTF-05, MKTF-08, MKTF-43, MKTF-44 showed greater than a foot of water level increase.

### MKTF and Non-MKTF Fluid Recovery

Fluid recovery in MKTF wells (Figure 3) upgradient of the Hydrocarbon Seep Area and with recoverable SPH, continued during the 2<sup>nd</sup> quarter of 2023 using a vacuum truck. A total of 78.64 gallons of water and 26.81 gallons of SPH were extracted in the 2<sup>nd</sup> quarter. As requested in Comment 2 in NMED's "Approval with Modifications Hydrocarbon Seep Interim Measures 2020 Fourth Quarter Status Report", dated March 30, 2021, fluid levels are taken 24 hours after vacuum truck extractions and are presented in Tables 4A through 4F. Due to large amounts of precipitation and muddy conditions, no vacuum truck activities were conducted 2<sup>nd</sup> quarter 2023.

Fluid recovery was attempted at the listed wells: MKTF-3, MKTF-5, MKTF-6, MKTF-7, MKTF-8, MKTF-13, MKTF-14, MKTF-15, MKTF-17R, MKTF-19, MKTF-22, MKTF-39, MKTF-49, OW-58A, OW-61, OW-65, OW-66, RW-1, RW-2R, RW-5, and RW-6.

These above wells were chosen for fluid recovery based on historical and persistent presence of recoverable SPH. Wells containing less than 0.1 ft of product for the duration of the quarter will be removed from fluid recovery. Wells measuring more than 1 ft of SPH will be added to the extraction list. Accordingly, for the second quarter of 2023, the following well will be removed from fluid recovery: RW-1. MKTF-10 will be added for fluid recovery. GWM-1 will not be added to the fluid recovery list because it is inaccessible to a vacuum truck. Fluid recovery will continue to be evaluated at the end of each quarter.

Mr. Dave Cobrain  
July 26, 2023  
Page 4

### **3<sup>rd</sup> Quarter 2023 IM Activities**

Below is a list of activities that are associated with ongoing IM activities that are planned for the 3<sup>rd</sup> quarter 2023.

- **Monitoring** – Monthly groundwater gauging will continue during the 3<sup>rd</sup> quarter of 2023. The water seep near the 90-day pad will be monitored for SPH monthly.
- **Hydrocarbon Seep Area Source Control** – The Hydrocarbon Seep Area will be pumped continuously using the groundwater extraction system.
- **Borrow Pit Seep Area** – The Borrow Pit Seep Area will be pumped continuously using the groundwater extraction system.
- **Investigations** – The following investigative activities and reports that pertain to seeps and releases in the area of the Hydrocarbon Seep Area have been completed or are expected to be scheduled for 2023, pending NMED approval of work plans.
  - **AOC 35** – An Investigation Work Plan (IWP) for Area of Concern (AOC) 35, which includes the area around the Marketing Tanks and the Truck Loading Racks, was approved with modifications on September 12, 2019. However, this investigation was postponed for revision due to the gasoline leak in the Truck Loading area found on October 27, 2019. The revised AOC 35 IWP Number 2 was submitted to NMED on September 1, 2021. NMED's Disapproval Revised Investigation Work Plan No. 2 Area of Concern 35 was received on October 20, 2021. The revised IWP and response to disapproval comments was submitted to NMED on April 11, 2022. NMED responded with an Approval with Modifications on December 12, 2022. A response to the Approval with Modifications was submitted to NMED no later than March 15, 2023. The Process Sewer IWP contained in AOC 35 was submitted to NMED March 31, 2023.

If you have any questions or comments regarding the information contained herein, please contact Mr. John Moore at (505) 879-7643 or Ms. Kateri Luka at (714) 713-1218.

Notes:

<sup>1</sup> = Corrected water table elevation calculation = (SPH thickness x 0.8) + ground water elevation

ft = feet

ft-bgs = feet below ground surface

SPH = separate phase hydrocarbon

NA = Not applicable

ND = Not detected

NM = Not measured

Depth to Water Column - if 0.00 is indicated - means water is at top of casing (full)  
under artesian flow conditions.

Dry indicates no fluid was detected

**Notes:**

<sup>1</sup> = Corrected water table elevation calculation = (SPH thickness x 0.8) + ground water elevation

ft = feet

ft-bgs = feet below ground surface

SPH = separate phase hydrocarbon

NA = Not Applicable

ND = Not Detected

NM = Not Measured

Depth to Water Column - if 0.00 is indicated - means water is at top of casing (full) under artesian flow conditions

Dry indicates no fluid was detected
