Background Information:

On May 30, 2020, Mewbourne Oil Company (Mewbourne) discovered a release at the QPQBSU Water Flood facility. The hose coming off the suction into the discharge side failed, resulting in the release of approximately 30 barrels (bbls) of crude oil and 100 bbls of produced water. During initial response activities, the hose was replaced, and a vacuum truck was utilized to recover approximately 5 bbls of crude oil and 15 bbls of produced water. The release affected an area of the facility pad and access road measuring approximately 9,884 square feet, as well as an area of the adjacent pasture measuring approximately 15,625 square feet.

The release was immediately reported to the New Mexico Oil Conservation Division's (NMOCD) Artesia District Office on June 2, 2020. The NMOCD "Release Notification & Corrective Action" form (C-141) is provided as Appendix A. A "Site Location Map" is provided as Figure 1.

Summary of Field Activities:

On June 1, 2020, Trinity Oilfield Services & Rentals, LLC (Trinity), commenced delineation activities at the site. On June 1 and 2, 2020, a hand auger was utilized to advance a series of 18 boreholes (SP-1 through SP-18) at the site to investigate the vertical extent of impacted soil. The auger holes were advanced to total depths ranging from 1 to 3 feet below ground surface (bgs). Soil samples were collected at 1-foot vertical intervals and field-screened with a chloride test kit and olfactory/visual senses. Field test results indicated additional vertical delineation was required in some areas.

On June 2, 2020, excavation of impacted soil commenced. A chloride test kit and olfactory/visual senses were utilized to determine the horizontal extent of impacted soil and to guide the excavation. From June 2 through July 21, 2020, approximately 2,780 cubic yards of impacted soil was excavated and transported to R360 (NMOCD Permit #NM-01-00061), for disposal. Prior to disposal, excavated soil was stockpiled on-site on 6-mil plastic to prevent leaching of contaminants into the vadose zone.

On June 8, 2020, five (5) composite soil samples (SP-1 Comp., SP-2 Comp., SP-3, Comp., SP-4 Comp., and SP-5 Comp.) were collected from the floor of the excavation on the facility pad and submitted to Hall Environmental Analysis Laboratory in Albuquerque, New Mexico, for analysis of chloride, total petroleum hydrocarbons (TPH), and benzene, toluene, ethylbenzene, and total xylene (BTEX) concentrations using Environmental Protection Agency (EPA) Methods 300.0, SW 846-8015 M/D, and SW 846-8021B, respectively. Laboratory analytical results indicated chloride, TPH, and BTEX concentrations in all soil samples were below the NMOCD Closure Criteria established for the site. However, additional vertical delineation was required in the area represented by soil sample SP-4 Comp.

On June 10, 2020, nine (9) composite soil samples (SP-7 Floor Comp., SP-8 Floor Comp., SP-10 Floor Comp., SP-11 Floor Comp., SP-15 Floor Comp., SP-16 Floor Comp., SP-17 Floor Comp., SP-18 W. Comp., and SP-18 Floor Comp.) were collected from the floor and sidewalls of the excavations in the pasture and submitted to the laboratory for analysis. Laboratory analytical results indicated chloride, TPH, and BTEX concentrations in all soil samples were below the Closure Criteria established for the site. However, additional vertical delineation was required in the areas represented

by soil samples SP-7 Floor Comp., SP-8 Floor Comp., SP-15 Floor Comp., and SP-16 Floor Comp.

On June 11, 2020, eight (8) composite soil samples (SP-6 Floor Comp., SP-7 E. Comp., SP-7 W. Comp., SP-8 E. Comp., SP-8 W. Comp., SP-12 Floor Comp., SP-13 Floor Comp., and SP-14 Floor Comp.) were collected from the floor and sidewalls of the excavations in the pasture and submitted to the laboratory for analysis. Additional delineation was also conducted in the areas represented by auger holes SP-1 through SP-8, SP-12 through SP-14, and SP-16 through SP-18 to further investigate the vertical extent of impacted soil in those areas. Soil samples were collected at 1- to 2-foot vertical intervals and field-screened with a chloride test kit and olfactory/visual senses. Representative confirmation samples (SP-1 @ 2', SP-2 @ 3', SP-3 @ 3', SP-4 @ 2', SP-5 @ 3', SP-6 @ 1', SP-7 @ 8', SP-8 @ 8', SP-12 @ 2', SP-13 @ 3', SP-14 @ 3', SP-16 @ 8', SP-17 @ 6', and SP-18 @ 2') were submitted to the laboratory for analysis. Laboratory analytical results indicated 1.) chloride, TPH, and BTEX concentrations in all soil samples were below the Closure Criteria established for the site, and 2.) vertical delineation in the areas represented by auger holes SP-1 through SP-8, SP-12 through SP-14, and SP-16 through SP-18 had been achieved.

On June 15, 2020, two (2) composite soil samples (SP-15 N. Comp. and SP-15 S. Comp.) were collected from the sidewalls of the excavation in the pasture and submitted to the laboratory for analysis. Additional delineation was also conducted in the area represented by auger hole SP-15 to further investigate the vertical extent of impacted soil in that area. Soil samples were collected at 1- to 2-foot vertical intervals and field-screened with a chloride test kit and olfactory/visual senses. A representative confirmation sample (SP-15 @ 8') was submitted to the laboratory for analysis. Laboratory analytical results indicated 1.) chloride, TPH, and BTEX concentrations in all soil samples were below the Closure Criteria established for the site, and 2.) vertical delineation in the area represented by auger hole SP-15 had been achieved.

On June 16, 2020, eleven (11) composite soil samples (SP-9 N. Comp., SP-9 S. Comp., SP-9 E. Comp., SP-9 Floor Comp., SP-15 E. Comp., SP-16 N. Comp., SP-16 S. Comp., SP-17 N. Comp., SP-17 S. Comp., SP-18 N. Comp., and SP-18 S. Comp.) were collected from the floor and sidewalls of the excavations in the pasture and submitted to the laboratory for analysis. Laboratory analytical results indicated the chloride, TPH, and BTEX concentrations in all soil samples were below the Closure Criteria established for the site, but additional horizontal delineation and excavation was required in the areas represented by soil samples SP-9 N. Comp., SP-9 E. Comp., and SP-16 N. Comp. However, additional remediation activities in the area represented by soil sample SP-16 N. Comp. were precluded by the presence of the caliche access road and several active pipelines.

On June 17, 2020, six (6) composite soil samples (SP-10 @ 14', SP-10 N. Comp., SP-10 S. Comp., SP-11 @ 14', SP-11 N. Comp., and SP-11 S. Comp.) were collected from the floor and sidewalls of the excavations in the pasture and submitted to the laboratory for analysis. Laboratory analytical results indicated the chloride, TPH, and BTEX concentrations in all soil samples were below the Closure Criteria established for the site, but additional horizontal delineation and excavation was required in the area represented by soil sample SP-11 S. Comp.

On June 30, 2020, the excavation was advanced to the extent practicable in the areas represented by soil samples SP-9 N. Comp. and SP-9 E. Comp. Two (2) additional composite samples (SP-9 N. and SP-9 E.) were collected from the sidewalls of the excavation and submitted to the laboratory for analysis. Additional delineation was conducted in the areas represented by auger holes SP-1 through SP-4 to further investigate the vertical extent of impacted soil in those areas. A hand auger was also utilized to advance a borehole (SP-11 S.) adjacent to the caliche access road to the south of the area represented by soil sample SP-11 S. Comp to further investigate the horizontal extent of impacted soil in that area. Laboratory analytical results indicated the chloride, TPH, and BTEX concentrations in all soil samples were below the Closure Criteria established for the site, but additional horizontal delineation and excavation was required in the area represented by soil sample SP-11 S. Comp. However, additional remediation activities in that area were precluded by the presence of the caliche access road and several active pipelines.

Locations of the auger holes and composite soil samples are depicted in Figure 2, "Site Plan". Laboratory analytical results are summarized in Table 1, and analytical reports are provided in Appendix D. Field test results are provided in Appendix E.

Environmental Site Summary & Closure Request

Deferral, Variance & Site Closure Requests:

Soil samples collected from the impacted area were analyzed by an NMOCD-approved laboratory, and concentrations of chloride, TPH, and BTEX were below the Closure Criteria listed in Table I of Section 19.15.29.12 of the New Mexico Administrative Code (NMAC) for a site where depth to groundwater is greater than 100 feet (see Appendix C, "Closure Criteria Justification", for more information). However, the chloride concentrations in composite soil samples SP-4 Comp., SP-11 S. Comp., and SP-16 N. Comp. were above the 600 mg/kg limit specified in Section 19.15.29.13.D(1) NMAC. Similarly, the TPH concentrations in composite soil samples SP-9 N. and SP-9 E. were slightly above the limit of 100 mg/kg (i.e., 114 and 116 mg/kg, respectively). Additional delineation and excavation in those five (5) areas was precluded by the presence of several active pipelines, as well as the caliche access road, which is the only thoroughfare to an active well and the QPQASU Consolidated Tank Battery to the west of the release site. Limiting access to both the production well and the tank battery would have placed an undue financial burden on Mewbourne and possibly introduced an environmental hazard, since routine inspection, maintenance, and repairs would not have been possible.

Pursuant to Section 19.15.29.12.C(2) NMAC, leaving the contamination in the areas represented by soil samples SP-4 Comp., SP-9 N., SP-9 S., SP-11 S. Comp., and SP-16 N. Comp. in-situ "does not cause an imminent risk to human health, the environment, or ground water". Therefore, Trinity, on behalf of Mewbourne, hereby requests closure of the release site, with deferral of remediation activities in the areas represented by soil samples SP-4 Comp., SP-11 S. Comp., and SP-16 N. Comp. until such time that the QPQBSU Water Flood and QPQASU Consolidated Tank Battery facilities and associated well, pipes, appurtenances, etc., are decommissioned and/or abandoned. A variance from the requirements of Sections 19.15.29.12.C(3) and 19.15.29.13.D(1) NMAC is also requested to leave the minimal TPH contamination in the areas represented by soil samples SP-9 N. and SP-9 S. in-situ, with no further remediation activity to be conducted.

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury

☒ The source of the release has been stopped.

If all the actions described above have not been undertaken, explain why: N/A

Per 19.15.29.8 B. (4) NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please attach a narrative of actions to date. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see 19.15.29.11(A)(5)(a) NMAC), please attach all information needed for closure evaluation.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

RE: QPQASU Water Flood Facility OrderNo.: 2006A30

Dear Robbie Runnels:

Hall Environmental Analysis Laboratory received 56 sample(s) on 6/19/2020 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman

RE: QPQASU Water Flood Facility OrderNo.: 2007092

Dear Robbie Runnels:

Hall Environmental Analysis Laboratory received 7 sample(s) on 7/2/2020 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Andy Freeman
