Please explain reason for why this event was beyond your operator's control	Inlet gas was intermittently flared when C-3 automatically shut down. The cause of the shutdown was determined to be incoming power issues. Inlet gas was rerouted to flare to protect personnel and equipment. Inlet gas was flared until C-3 could be restarted.
Steps taken to limit the duration and magnitude of venting or flaring	The unit was checked to ensure that it was safe to operate before restarting the unit.
Corrective actions taken to eliminate the cause and reoccurrence of venting or flaring	When the unit was verified safe to operate the unit was restarted and normal operation resumed. Flaring ceased.
