## HUNGRY HORSE, LLC

---

The following *Final Closure Report* serves as a condensed update on field activities undertaken at the afore referenced Site.

### **Background:**

The site is located in Unit Letter E (SW/NW), Section 10, Township 16 South, Range 32 East, approximately 6 miles north of Maljamar, in Lea County, New Mexico. The property is owned by the Bogle LTD Co. Topographic Map, OSE POD Locations Map, and USGS Well Locations Map are included as Figure 1, Figure 2, and Figure 3, respectively.

The release site occurred on an active well pad; latitude 32.93619 North, Longitude 103.7613 West. The initial NMOC Form C-141 indicated that on January 16, 2018 approximately 3 bbls of oil were released due to a casing leak. No oil was recovered. Previously submitted pages of the NMOC Form C-141 are available on the NMOC Imaging System. Signed Remediation and Closure Pages of the NMOC Form C-141 are included as Attachment VI.

### **NMOC Site Classification:**

A search of the New Mexico Office of the State Engineer (NMOSE) and United States Geological Survey (USGS) groundwater databases was completed in an effort to determine the horizontal distance to known water sources within a half mile radius of the Release Site. Karst mapping indicates the site is not located in a Karst designated area.

As no water wells could be located within a half mile of the release area, depth to water could not be determined. Approximate depth to groundwater was determined using published water well data and, per NMOC guidance, drilling a 51-foot borehole at the location to determine if groundwater was present within 50 feet of ground surface.

On October 8, 2020, per NMOSE approved Application For Permit to Drill, well L-15011 POD1 was drilled to a depth of 51 feet bgs. The bore hole was drilled, a period of 72 hours was observed, and then the bore was gauged for presence of water. On October 12, 2020, no water was present in the borehole when gauged.

In accordance with the NMOSE approved Well Plugging Plan of Operations, on October 15, 2020, the borehole was plugged with bentonite pellets.

Depth to groundwater information, including Application For Permit to Drill, Well Plugging Plan of Operations, Well Record and Log, and Plugging Record, are provided as Attachment II and the results are depicted on Figures 2 & 3.

Utilizing this information, the NMOCD Closure Criteria for the Site were determined as follows:

Depth to Groundwater	Constituent	Method	Limit
>51'	Chloride	EPA 300.0 or SM4500 CLB	10,000 mg/kg
	TPH (GRO + DRO + MRO)	EPA SW-846 Method 8015M Ext	2,500 mg/kg
	DRO + GRO	EPA SW-846 Method 8015M	1,000 mg/kg
	BTEX	EPA SW-846 Methods 8021B or 8260B	50 mg/kg
	Benzene	EPA SW-846 Methods 8021B or 8260B	10 mg/kg

### **Delineation and Remediation Activities:**

From April 2, 2020 through May 6, 2020 Hungry Horse conducted an initial site assessment and a series of sampling events. During the sampling events, a series of sample test trenches were advanced throughout the release area in an effort to determine the vertical extent of contamination. In addition, sample test trenches were advanced along the inferred edges of the affected area in an effort to determine the horizontal extent of contamination. During the advancement of the test trenches, soil samples were collected and field screened for chloride concentrations via titration method utilizing a LaMotte Chloride Kit.

On July 20, 2020, remediation activities commenced on location. The release area over the reserve pit was scraped of any visible stains and stockpiled on-site, atop plastic, pending final transport to disposal. The area characterized by sample locations SP4, SP6, SP7, and SP21 was excavated to a depth of approximately eight feet bgs. The floor and sidewalls of the excavation were advanced until laboratory analytical results indicated BTEX, TPH, and chloride concentrations were below the NMOCD Closure Criteria.

On July 21, 2020, thirty confirmation soil samples were collected. Samples C1 through C24, FL1, FL2, and SW1 through SW4, were submitted to the laboratory for analysis of BTEX, TPH, and chloride. Laboratory analytical results indicated BTEX, TPH, and chloride concentrations were below the applicable NMOCD Closure Criteria in each of the submitted soil samples with the exception of C1, C2, and C3, which exhibited a GRO+DRO concentration of 1,370 mg/kg, 1,290 mg/kg, and 1,360 mg/kg, respectively.

On August 3, 2020, Hungry Horse returned to the site for excavation activities. Impacted soil in the area characterized by sample locations C1, C2, and C3 was surface scraped to a depth of approximately six inches bgs and transported to an approved disposal facility. After removal of impacted soil, three confirmation soil samples, C1b, C2b, and C3b, were collected and submitted to the laboratory for analysis of BTEX, TPH, and chloride. Laboratory analytical results indicated contaminant concentrations were below the NMOCD Closure Criteria in each of the submitted samples.

On January 20, 2021, NMOCD denied closure of this site, requesting remediation of the area characterized by sample locations C4 through C24, as laboratory analytical data indicated TPH concentrations in excess of NMCOD Closure Criteria. NMOCD email correspondence, verifying only the area characterized by sample locations C4 through C24 as requiring remediation, is provided as Attachment V.

On February 8, 2021, Hungry Horse returned to the site for additional excavation and sampling activities. Impacted soil in the area characterized by sample locations C4 through C24, was surface scraped to a depth of approximately six inches bgs. Contaminated soil was transported to an approved disposal facility. Confirmation soil samples, C4b through C24b, were then collected and submitted to the laboratory for analysis of BTEX, TPH, and chloride. Laboratory analytical results indicated contaminant concentrations were below the NMOCD Closure Criteria in each of the submitted samples.

A Delineation Sample Location Map and Excavation Sample Location Map are provided as Figure 4 and Figure 5, and Field data is provided as Attachment III. A Summary of Soil Sample Laboratory Analytical Results is provided as Table 1 and Laboratory Analytical Reports are provided as Attachment IV.

The affected area off the pad measured approximately 100 ft. in length and 48 ft. in width. The affected area on the pad measured approximately 20 ft. in length, 20 ft. in width and 8 ft. in depth. During remediation activities approximately 830 cubic yards of impacted soil were hauled to an NMOCD approved disposal facility.

### **Restoration, Reclamation, and Re-Vegetation:**

Based upon laboratory analytical results from confirmation soil samples, the excavated areas were backfilled with clean, non-impacted, material. The areas were contoured to achieve erosion control and preserve surface water flow. The affected area off the production site has been reseeded with an approved seed mixture that is free of noxious weeds. Seed Tag is provided in Attachment III.

### **Closure Request:**

Remediation activities were conducted in accordance with applicable NMOCD Regulations. Soil affected above the NMOCD Closure Criteria was excavated and hauled to an NMOCD approved facility for disposal. Laboratory analytical results from confirmation soil samples indicate concentrations of BTEX, TPH, and chloride are below the NMOCD Closure Criteria.

Based on laboratory analytical results and field activities conducted to date, Hungry Horse recommends Grand Banks Energy provide copies of this *Final Closure Report* to the appropriate agencies and request closure be granted to the Rancho Verde 10 State Well #2.

GRAND BANKS ENERGY CO

Greetings:

Your approved copy of the above numbered permit to drill a well for non-consumptive purposes is enclosed. You must obtain an additional permit if you intend to use the water. It is your responsibility to provide the contracted well driller with a copy of the permit that must be made available during well drilling activities.

Carefully review the attached conditions of approval for all specific permit requirements.

\* Please be advised, that the NM licensed driller assigned to complete this borehole must be licensed in the use of auger equipment and in monitoring boreholes. Hungry Horse, LLC/Lic #1755 is not currently licensed for this activity.

- \* If use of this well is temporary in nature and the well will be plugged at the end of the well usage, the OSE must initially approve of the plugging. If plugging approval is not conditioned in this permit, the applicant must submit a Plugging Plan of Operations for approval prior to the well being plugged. The Plugging Record must be properly completed and submitted to the OSE within 30 days of the well plugging.
- \* If the final intended purpose and condition requires a well ID tag and meter installation, the applicant must immediately send a completed meter report form to this office.
- \* The well record and log must be submitted within 30 days of the completion of the well or if the attempt was a dry hole.
- \* This permit expires and will be cancelled if no well is drilled and/or a well log is not received by the date set forth in the conditions of approval.

Appropriate forms can be downloaded from the OSE website [www.ose.state.nm.us](http://www.ose.state.nm.us).

Sincerely,

Claudia K. Guillen

## WELL PLUGGING PLAN OF OPERATIONS

**NOTE:** A Well Plugging Plan of Operations shall be filed with and accepted by the Office of the State Engineer prior to plugging. This form may be used to plug a single well, or if you are plugging multiple monitoring wells on the same site using the same plugging methodology.

**Alert!** Your well may be eligible to participate in the Aquifer Mapping Program (AMP)-NM Bureau of Geology [cgmn/](http://geonm.nmt.edu/resources/water/cgmn/) if within an area of interest and meets the minimum construction requirements, such as there is still water in your well, and the well construction reflected in a well record and log is not compromised, contact AMP at 575-835-5038 or -6951, or by email [nmbg-waterlevels@nmt.edu](mailto:nmbg-waterlevels@nmt.edu), prior to completing this form. Showing proof to the OSE that your well was accepted in this program, may delay the plugging of your well until a later date.

**I. FILING FEE:** There is no filing fee for this form.

**II. GENERAL / WELL OWNERSHIP:**  Check here if proposing one plan for multiple monitoring wells on the same site and attaching WD-08m

**VII. ADDITIONAL INFORMATION:** List additional information below, or on separate sheet(s):

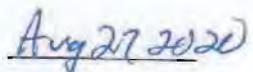

72 hours after drilling, Well BH1 (32.937247, -103.760217) will be checked for the presence of water. If water is present the NMOSE and NMOCD will be notified for guidance on possible conversion to monitor well. If no water is present the well will be plugged according to NMOSE Well Plugging Handbook, Appendix A Permit Condition 6E. Within 20 days of well plugging, driller will submit Well Plugging Record WD-11 to NMOSE. The maximum period of time for completion of the operation will be 30 days.

### Notes and Definitions

M4 Matrix spike recovery value is suspect since the analyte concentration in the sample is disproportionate to the spike level. The associated LCS spike recovery was acceptable.

M2 Matrix spike recovery was outside quality control limits. The associated LCS spike recovery was acceptable.

ND Analyte NOT DETECTED at or above the reporting limit

NR Not Reported

## QC Summary Report Comment:

Calculations are based off of the raw (non-rounded) data. However, for reporting purposes all QC data is rounded to three significant figures. Therefore, hand calculated values may differ slightly.

**Lindsey Nevels:**

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the Eurofins Xenco, LLC Report Number(s) 687926. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by Eurofins Xenco, LLC. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 687926 will be filed for 45 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting Eurofins Xenco, LLC to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

## Flagging Criteria

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.
- B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F** RPD exceeded lab control limits.
- J** The target analyte was positively identified below the quantitation limit and above the detection limit.
- U** Analyte was not detected.
- L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K** Sample analyzed outside of recommended hold time.
- JN** A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

\*\* Surrogate recovered outside laboratory control limit.

Lindsey,

That is correct, and will also include benzene and BTEX concentrations to be less than 10 mg/kg and 50 mg/kg, respectively. And keep in mind samples C-1b through C-3b met our reclamation requirements.

Please let me know if you have any additional questions.

Cristina,

I wanted to get verification on Rancho Verde. As long as we can get sample locations C1-C24 excavated to a depth where the chloride concentrations are less than 600 mg/kg and 100 mg/kg tph, within the top 4' and get the C1-41 signed in appropriate places we should be able to close?

**Subject:** [EXT] Ranch Verde

Ms.Eads,

I am inquiring on the denied closure report for the *Rancho Verde nRM2017435952*. Maybe you can solve my confusion. I am thinking I may be looking over something. You state : Per **19.15.29.13 D.(1) NMAC**, "The reclamation must contain a minimum of four feet of non-waste containing, uncontaminated, earthen material with chloride concentrations less than 600 mg/kg as analyzed by EPA Method 300.0, or other test methods approved by the division..." I am not seeing where any of the analytical lab results are over that criteria. The top 4' is under the 600 mg/kg concentration. If you could help me out with this that is greatly appreciated. Thank You!

Attach a comprehensive report (electronic submittals in .pdf format are preferred) demonstrating the lateral and vertical extents of soil contamination associated with the release have been determined. Refer to 19.15.29.11 NMAC for specifics.

### **Characterization Report Checklist:** *Each of the following items must be included in the report.*

- Scaled site map showing impacted area, surface features, subsurface features, delineation points, and monitoring wells.
- Field data
- Data table of soil contaminant concentration data
- Depth to water determination
- Determination of water sources and significant watercourses within ½-mile of the lateral extents of the release
- Boring or excavation logs
- Photographs including date and GIS information
- Topographic/Aerial maps
- Laboratory data including chain of custody

If the site characterization report does not include completed efforts at remediation of the release, the report must include a proposed remediation plan. That plan must include the estimated volume of material to be remediated, the proposed remediation technique, proposed sampling plan and methods, anticipated timelines for beginning and completing the remediation. The closure criteria for a release are contained in Table 1 of 19.15.29.12 NMAC, however, use of the table is modified by site- and release-specific parameters.

## Remediation Plan

**Remediation Plan Checklist:** *Each of the following items must be included in the plan.*

- Detailed description of proposed remediation technique
- Scaled sitemap with GPS coordinates showing delineation points
- Estimated volume of material to be remediated
- Closure criteria is to Table 1 specifications subject to 19.15.29.12(C)(4) NMAC
- Proposed schedule for remediation (note if remediation plan timeline is more than 90 days OCD approval is required)

**Deferral Requests Only:** *Each of the following items must be confirmed as part of any request for deferral of remediation.*

- Contamination must be in areas immediately under or around production equipment where remediation could cause a major facility deconstruction.
- Extents of contamination must be fully delineated.
- Contamination does not cause an imminent risk to human health, the environment, or groundwater.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. The responsible party acknowledges they must substantially restore, reclaim, and re-vegetate the impacted surface area to the conditions that existed prior to the release or their final land use in accordance with 19.15.29.13 NMAC including notification to the OCD when reclamation and re-vegetation are complete.
