Determination of Reporting Requirements	
Answer all questions that apply. The Reason(s) statements are calculated based on your answers and	d may provide addional guidance.
Was or is this venting and/or flaring caused by an emergency or malfunction	Yes

Answer all questions that apply. The Reason(s) statements are calculated based on your answers and may provide addional guidance.						
Was or is this venting and/or flaring caused by an emergency or malfunction	Yes					
Did or will this venting and/or flaring last eight hours or more cumulatively within any 24-hour period from a single event	No					
Is this considered a submission for a venting and/or flaring event	Yes, minor venting and/or flaring of natural gas.					
An operator shall file a form C-141 instead of a form C-129 for a release that, includes liquid during volume was there or will there be at least 50 MCF of natural gas vented and/or flared during this event	enting and/or flaring that is or may be a major or minor release under 19.15.29.7 NMAC. Yes					
Did this venting and/or flaring result in the release of ANY liquids (not fully and/or completely flared) that reached (or has a chance of reaching) the ground, a surface, a watercourse, or otherwise, with reasonable probability, endanger public health, the environment or fresh water	No					
Was the venting and/or flaring within an incorporated municipal boundary or withing 300 feet from an occupied permanent residence, school, hospital, institution or church in existence	No					

Equipment Involved	
Primary Equipment Involved	Not answered.
Additional details for Equipment Involved. Please specify	Not answered.

Representative Compositional Analysis of Vented or Flared Natural Gas					
Please provide the mole percent for the percentage questions in this group.					
Methane (CH4) percentage	75				
Nitrogen (N2) percentage, if greater than one percent	1				
Hydrogen Sulfide (H2S) PPM, rounded up	10				
Carbon Dioxide (C02) percentage, if greater than one percent	0				
Oxygen (02) percentage, if greater than one percent	0				
If you are venting and/or flaring because of Pipeline Specification, please provide the required specifications for each gas.					
Methane (CH4) percentage quality requirement Not answered.					
Nitrogen (N2) percentage quality requirement	Not answered.				
Hydrogen Sufide (H2S) PPM quality requirement	Not answered.				
Carbon Dioxide (C02) percentage quality requirement	Not answered.				
Oxygen (02) percentage quality requirement	Not answered.				

Date(s) and Time(s)					
Date venting and/or flaring was discovered or commenced	10/06/2021				
Time venting and/or flaring was discovered or commenced	01:32 PM				
Time venting and/or flaring was terminated	02:43 PM				
Cumulative hours during this event	1				

Measured or Estimated Volume of Vented or Flared Natural Gas				
Natural Gas Vented (Mcf) Details	Not answered.			

Natural Gas Flared (Mcf) Details	Cause: Equipment Failure Gas Compressor Station Natural Gas Flared Released: 488 Mcf Recovered: 0 Mcf Lost: 488 Mcf	
Other Released Details	Not answered.	
Additional details for Measured or Estimated Volume(s). Please specify	Not answered.	
Is this a gas only submission (i.e. only significant Mcf values reported)	Yes, according to supplied volumes this appears to be a "gas only" report.	

Venting or Flaring Resulting from Downstream Activity					
Was or is this venting and/or flaring a result of downstream activity	Not answered.				
Was notification of downstream activity received by you or your operator	Not answered.				
Downstream OGRID that should have notified you or your operator	Not answered.				
Date notified of downstream activity requiring this venting and/or flaring	Not answered.				
Time notified of downstream activity requiring this venting and/or flaring	Not answered.				

Steps and Actions to Prevent Waste						
For this event, the operator could not have reasonably anticipated the current event and it was beyond the operator's control.	True					
Please explain reason for why this event was beyond your operator's control	Compressor station shutdown due to a high pressure at the first stage scrubber. This shutdown resulted in a flaring event.					
Steps taken to limit the duration and magnitude of venting and/or flaring	All of the facilities and emissions control devices at this site are operating as designed and, where applicable, are authorized. Chevron field personnel will execute practicable measures to minimize emissions.					
Corrective actions taken to eliminate the cause and reoccurrence of venting and/or flaring	Corrective measures focused on reducing gas production as quickly and safely as possible to minimize the duration and volume of gas flared.
