**January 13, 2021**

**APPROVED**

*By Nelson Velez at 9:54 am, Jan 11, 2022*

Review of 2020 ANNUAL GROUNDWATER MONITORING REPORT:

**Content satisfactory**

Contractor recommendations approved and are as follows;

1. Continue operation and maintenance of the groundwater recovery system
2. Perform quarterly groundwater monitoring events in accordance with NMOCD directives
3. OCD approves discontinuing sampling for PAH in groundwater monitoring wells MW-3A, MW-4A, MW-7, MW-8, MW-9, MW-18, MW-22 and MW-23.
4. OCD will approve sampling termination from monitoring wells that have exhibited no evidence of contamination above regulatory limits for eight (8) consecutive quarters
5. OCD approves wells MW-11, MW-17, MW-18, MW-19, and MW-20 be sampled on a semi-annual basis
6. Submit annual report to OCD no later than March 31,2022.

## **1.0 INTRODUCTION AND OBJECTIVES**

---

### **1.1 Objectives and Site Background**

The 8" Moore to Jal #2 (site) is located approximately 9.2 miles southeast of Lovington in Unit Letter J, Section 16, Township 17 South and Range 37 East in Lea County, New Mexico, on property owned by the State of New Mexico. The site is located within the West Lovington Oil Field at 32° 49' 56.61" N, 103° 15' 08.47" W. There are no residences, groundwater wells, or surface water bodies within a 1,000-foot radius of the site. The initial release occurred from an EOTT Energy Pipeline (EOTT) steel pipeline on October 22, 2002. Subsequently, EOTT changed its name to Link Energy in October 2003, and Plains Marketing, L.P. (Plains) purchased the assets of Link Energy on April 1, 2004. Initial reports estimated that 25 barrels (bbls) of crude oil were released. Approximately 5,794 square feet of surface area was impacted by the release.

On February 5, 2007, Talon/LPE (Talon) was retained by Plains to assume remediation activities at the site. Remediation activities at the site were previously conducted by EPI.

### **1.2 Site Geology**

The surface deposits in Lea County are composed of Blackwater Draw (Illinoian) sediments, Ogallala sediments and undivided Quaternary alluvium, which is also termed 'cover sands'. The soil in the upper two (2) feet at the site is composed of gravelly loam that consists of 43% sand, 18% clay and 40% silt and also contains abundant eroded gravel to cobble size caliche fragments. Below the top soil is predominately unconsolidated sand to weakly cemented sandstone which has undergone calichification of varying extent.

Below the Blackwater Draw Formation is the Ogallala Formation of Miocene to Pliocene age. The Ogallala Formation was deposited from sediments eroded from the Southern Rockies and consists mostly of eolian sediments, silty to very fine sand or loess. During the middle to late Miocene, the Ogallala was deposited by fluvial mechanism as paleovalley fill composed of gravelly to sandy braided stream deposits that trended west to east across the Southern High Plains. During the late Miocene the west to east drainage was diverted (captured) by the Pecos River. Subsequently, the Pecos River basin has experienced deflation, which facilitated eolian deposition on the Southern High Plains during the Pliocene.

### **1.3 Previous Environmental Investigations**

Currently, there are a total of 23 groundwater monitor wells existing in the vicinity of the release (see Figure 1). With New Mexico Oil Conservation Division (NMOCD) approval and landowner concurrence, groundwater monitor well MW-1 was installed in July 2004. Subsequently, groundwater monitor wells MW-2, MW-3, and MW-4 were installed in October 2004, monitor wells MW-6 through MW-13 were installed in November 2007, MW-14 through MW-16 were installed in March of 2010 and MW-17 through MW-21 were installed in August of 2010. Replacement wells MW-3A and MW-4A, and down-gradient

monitor wells MW-22 and MW-23 were installed in December of 2013.

Phase-separated hydrocarbon (PSH) recovery operations have been performed at the site since 2004. Currently, there are five (5) total fluid pumps in operation at the site used to recover PSH. Table 1, which summarizes historical groundwater and PSH gauging, is provided in Appendix B.

A transfer system was installed during the year 2011 that is designed to pump recovered groundwater from the site to the Rocky Smith SWD Systems, State 'E' #23 salt water disposal (SWD) (NMOCD # 307219) facility, thereby eliminating the need to haul water to a disposal facility with a vacuum truck. The system is composed of a three (3) inch HDPE line that was installed (slip-lined) into the out of service Moore to Jal eight (8) inch pipeline from the site through the Moore to Jal #1 site to the C.S. Caylor site, where it is connected to the HDPE line that runs from the Caylor site to the afore referenced SWD. A five (5) HP transfer pump is used to impel the water down the HDPE line. One (1) Mobile dual-phase extraction (MDPE) event was conducted on March 17, 2020.

#### **1.4 Regulatory Framework**

Groundwater analytical data collected from this site is evaluated to the New Mexico Water Quality Control Commission (NMWQCC) groundwater standards outlined in the table below.

<b>(NMWQCC) groundwater standards</b>	
<b>Compound</b>	<b>mg/L</b>
Benzene	0.010
Toluene	0.750
Ethylbenzene	0.750
Total Xylenes	0.620
PAH (Naphthalene)	0.030
PAH (Benzo[a]pyrene)	0.0007

The subsequent sections of this report provide summaries of the groundwater monitoring activities that were conducted at the subject site during the year 2020 as well as analytical results from each groundwater sampling event. Cumulative analytical results for the four (4) 2020 sampling events are summarized in Table 2 and 3, in Appendix B, and Figures 1, 2a through 2d, and 3a through 3d in Appendix A. Laboratory analytical data reports and chain of custody documentation are included in Appendix C.

## 2.0 SITE ACTIVITIES

---

The sections that follow summarize groundwater monitoring and PSH recovery activities conducted at the subject site during the year 2020. The primary function of groundwater monitoring activities is to collect depth to fluid measurements and to collect groundwater samples from monitor wells for laboratory analysis. The objective of groundwater monitoring is to evaluate the status of the dissolved-phase and PSH plumes and verify the effectiveness of the remediation system as to inhibiting plume migration, reducing the volume of PSH impacting the groundwater and determining if modifications to the remediation system would improve its overall performance and efficiency.

A synopsis of analytical results for the four (4) groundwater monitoring events is located in Table 2, in Appendix B, and annotated in map form on Figures 3a through 3d in Appendix A. Laboratory analytical data reports and chain of custody documentation are included in Appendix C.

### 2.1 Site Assessment Activities

A 4-inch diameter replacement monitor well for MW-21 was installed on September 2, 2020. The replacement well is identified as MW-21A and has a total depth of one-hundred fifteen (115) feet below ground surface (bgs) with twenty (20) feet of screen. The well (MW-21) was inadvertently destroyed by a local contractor during work activities in the area and annotated by the technician during the second quarterly monitoring event. The replacement well, MW-21A, has been permitted through the New Mexico Office of the State engineer (NMOSE).

The location of the well can be found on the updated **Figure 1 – Site Plan** in Appendix A. The monitor well was installed by a New Mexico licensed driller from Talon/LPE.

### 2.2 Groundwater Monitoring Activities

A total of four (4) groundwater monitoring events were conducted by Talon during the year 2020. The events occurred in: March, June, September, and December.

During the March 2020 event, groundwater samples were collected from eighteen (18) monitor wells: MW-3A, MW-4A, MW-5 through MW-13, and MW-17 through MW-23. Groundwater samples were not collected from four (4) monitor wells due to the wells being dry (MW-2, and MW-14 through MW-16) and one (1) well (MW-1) was purged dry without recovery. Details of the gauging, purging, and sampling activities are presented below in Section 2.3.

During the June 2020 event, groundwater samples were collected from seventeen (17) monitor wells: MW-3A, MW-4A, MW-5 through MW-13, MW-17 through MW-20, MW-22, and MW-23. Groundwater samples were not collected from four (4) monitor wells due to the wells being dry (MW-2, and MW-14 through MW-16), one (1) well (MW-1) was purged

dry and never recovered, and one (1) well (MW-21) was destroyed prior to sampling event with NMOSE permitting pending. Details of the gauging, purging, and sampling activities are presented below in Section 2.3.

During the September 2020 event, groundwater samples were collected from seventeen (17) monitor wells: MW-3A, MW-4A, MW-5, MW-6, MW-8 through MW-13, MW-17 through MW-20, MW-21A, MW-22, and MW-23. Groundwater samples were not collected from five (5) monitor wells due to the wells being dry (MW-1, MW-2, and MW-14 through MW-16) and one (1) well for having PSH (MW-7). Details of the gauging, purging, and sampling activities are presented below in Section 2.3.

During the December 2020 event, groundwater samples were collected from eighteen (18) monitor wells: MW-3A, MW-4A, MW-5 through MW-13, MW-17 through MW-20, MW-21A, MW-22, and MW-23. Groundwater samples were not collected from five (5) monitor wells due to being dry (MW-1, MW-2, and MW-14 through MW-16). Details of the gauging, purging, and sampling activities are presented below in Section 2.3.

### **2.3     Groundwater Gauging, Purging, and Sampling Procedures**

During each groundwater monitoring event, all monitor wells were measured with an oil/water interface probe to determine static water levels and PSH thicknesses, if present. The data collected from measurements were used to construct groundwater gradient maps and PSH thickness maps. Table 1 – Summary of Historical Fluid Level Measurements contains all depth to fluid data collected during 2020.

Subsequent to gauging, all monitor wells were purged using a 12-volt submersible pump equipped with vinyl tubing. The pump and tubing were decontaminated with Alconox® detergent and rinsed with distilled water after each use. Recovered purge water and water used in the decontamination process was contained in 55-gallon drums. After the groundwater monitoring event, all retained water was deposited into the on-site tank and later removed via the site transfer system to the SWD.

Groundwater samples were collected from all monitor wells not impacted with PSH using dedicated disposable polyethylene bailers. Groundwater samples were not collected from wells impacted with PSH. All samples were contained in appropriately preserved laboratory supplied sample vials required for the requested analysis. The samples were maintained on ice, in the custody of Talon personnel, until delivery to Xenco Laboratories in Midland, Texas for analysis. The groundwater samples collected during 2020 were analyzed for benzene, toluene, ethylbenzene, and xylene (BTEX) by EPA Method SW-846 8021B. Groundwater samples collected from nine wells during the March 2020 event were analyzed for polycyclic aromatic hydrocarbons PAH by EPA Method 8270C.

### **2.4     Phase Separated Hydrocarbon Recovery**

Prior to October 2008, a mobile recovery trailer with total fluids pumps was mobilized to the site on a weekly basis to recover PSH from monitor wells MW-1, MW-2, MW-3, MW-5, MW-6, MW-7, and MW-9.

On October 7, 2008, a permanent system was installed utilizing two (2) AP-4 pneumatic total fluid pumps in monitor wells MW-1 and MW-7 and four (4) skimmers in monitor wells MW-3, MW-5, MW-6, and MW-9 to recover PSH and to inhibit migration of the PSH plume. In 2013, the skimmer pumps in MW-5 and MW-6 were replaced with total fluids pumps. In 2014, the skimmer pump in MW-9 was replaced with a total fluids pump. The system of total fluids pumps are powered by a single-phase, 230-volt, 7.5 HP two-stage reciprocating air compressor. Fluid recovered by the pumps is retained in a 6,250-gallon poly tank. The tank is equipped with a high level shut off switch to prevent overflow and it is located within a secondary containment compound that is outfitted with a poly-liner. Recovered PSH is periodically removed from the recovery tank with a vacuum truck. Recovered groundwater was transported to an approved NMOCD disposal facility via the water transfer system, and removed PSH was re-introduced to the Plains' pipeline system at the Plains operated Lea Station.

Currently, the recovered fluids upon reaching pre-determined level within the holding tank engage a head pressure switch which in turn operates a fluid transfer pump. When the pump is engaged the recovered fluids are transferred to a 4-inch HDPE line shared with recovered PSH and water from the Moore to Jal #1 and C.S. Caylor groundwater recovery systems. A five (5) HP transfer pump then impels the fluids to the Apollo SWD System for disposal.

Talon personnel performed a minimum of weekly maintenance to the remediation system to ensure efficient operation, to optimize PSH recovery and to minimize down time. The poly tank is gauged weekly to monitor PSH recovery volume.

During 2020, the quarterly PSH and groundwater recovery totals from the system are as follows:

- 1<sup>st</sup> Quarter - 0 bbls crude oil and 894 bbls of groundwater
- 2<sup>nd</sup> Quarter - 0 bbls crude oil and 885.2 bbls of groundwater
- 3<sup>rd</sup> Quarter - 0 bbls crude oil and 599.0 bbls of groundwater
- 4<sup>th</sup> Quarter – 0 bbls crude oil and 540.3 bbls of groundwater

In addition to system recovery, one (1) MDPE event, in which vapor PSH was recovered, was conducted on site during 2020. The MDPE event recovery totals are as follows:

- March 17, 2020 – 0.22 bbls vapor, 0 bbls liquid, 4.52 bbls groundwater

During 2020, a total of 0.22 bbls of crude oil and a total of 2,923.02 bbls of groundwater were recovered by the PSH recovery system and MDPE event. Approximately 230.73 bbls of crude oil have been recovered at the subject site since PSH recovery activities were initiated.

## **3.0 GROUNDWATER AND MONITORING RESULTS**

The results of the laboratory analysis are summarized in Table 2 – Summary of Historical Groundwater Analytical Data in Appendix B. Laboratory analytical data reports and chain of custody documentation are provided in Appendix C.

### **3.1 Groundwater Monitoring Results**

The sections that follow present the results from the four (4) groundwater monitoring events conducted at the subject site.

#### **3.1.1 Physical Characteristics of the First Water-Bearing Zone**

The primary groundwater resource under the Southern High Plains, including the site, is referred to as the Ogallala Aquifer or High Plains Aquifer. The Southern portion of the Ogallala Aquifer underlies an area of about 29,000 square miles in western Texas and eastern New Mexico, including all or part of 31 counties in Texas and six (6) counties in New Mexico.

The Ogallala Aquifer is generally unconfined and the potentiometric surface generally mimics the topography with the regional flow direction being from the northwest to the southeast. The mean regional gradient is 15 feet per mile and the typical groundwater velocity averages seven inches per day. The regional hydraulic conductivity averages 17 gallons per day per square-foot and specific yield averages 16%.

The Ogallala Aquifer has experienced acute depletion from extensive irrigation and urban demand, which have exceeded the average annual recharge rate. Recharge of the Ogallala Aquifer on the Southern High Plains occurs predominately from rainfall runoff that accumulates in ephemeral streams and playa lakes as well as direct recharge in areas that contain permeable soils such as sand hills. Recharge rates vary depending on mechanism, but averages from zero (0) to 1.6 inches per year.

The composition of Ogallala groundwater is defined as mixed-cation-HCO<sub>3</sub>, therefore, Ogallala groundwater is considered hard. Problems with scale have occurred with residential and commercial water systems that use Ogallala groundwater and often treatment strategies are employed to reduce the effects of scale. The typical total dissolved solids of Ogallala groundwater in the Hobbs-Lovington area is generally less than 1,000 mg/L (ppm) in areas not impacted by oil-field brines. The pH of Ogallala water averages 7.3.

#### **3.1.2 Groundwater Gradient and Flow Direction**

The depth to fluid measurements was collected during each of the four (4) groundwater monitoring events during the year 2020. The results of the fluid level measurements are summarized in Table 1 - Summary of Historical Fluid Level Measurements in Appendix B.

The collected data was used to construct potentiometric surface maps in order to interpret the groundwater gradient and flow direction. The maps, designated Figures 2a through 2d are presented in Appendix A.

Potentiometric surface maps were constructed from each of the four (4) of the water level measurement data/sets:

- March 18, 2020
- June 16, 2020
- September 18, 2020
- December 2, 2020

These maps are Figures 2a, 2b, 2c, and 2d, respectively, and are presented in Appendix A.

The potentiometric surface map for March 18, 2020 is constructed using water level elevations from all wells. The water level elevations exhibit a general groundwater direction of flow to the southeast with an approximate gradient of 0.0031 feet/foot.

The potentiometric surface map for June 16, 2020 is constructed using water level elevations from all wells. The water level elevations exhibit a general groundwater direction of flow to the south-southeast with an approximate gradient of 0.0033 feet/foot.

The potentiometric surface map for September 18, 2020 is constructed using water level elevations from all wells. The water level elevations exhibit a general groundwater direction of flow to the southeast with an approximate gradient of 0.0029 feet/foot.

The potentiometric surface map for December 2, 2020 is constructed using water level elevations from all wells. The water level elevations exhibit a general groundwater direction of flow to the southeast with an approximate gradient of 0.0033 feet/foot.

Groundwater elevations at the subject site declined approximately 1.61 feet for the year, which is consistent with the regional declining trend of groundwater levels in the Ogallala Aquifer.

### 3.1.3 Phase Separated Hydrocarbon (PSH)

An oil/water interface probe was used to determine the thicknesses of PSH during the four (4) groundwater monitoring events. This will be denoted in Table 1 - Summary of Historical Fluid Level Measurements in Appendix B. The following summarizes the status of the PSH thicknesses observed during the four (4) groundwater monitoring events:

- In March 2020, PSH was not observed in any monitor wells.
- In June 2020, PSH was not observed in any monitor wells.
- In September 2020, 0.02 feet of PSH was measured in monitor well MW-7.
- In December 2020, PSH was not observed in any monitor wells.

In addition to potentiometric surface maps, isopleth maps were prepared depicting the measured PSH thicknesses and PSH plume geometry. PSH plume delineation and thickness maps are presented in Appendix A as Figures 3a through 3d. PSH was detected during only one of the four groundwater monitoring events in 2020, as noted above.

PSH recovery operations have been performed at the site since 2004. Currently, there are a total of five (5) total fluid pumps in operation at the site. A summary of the historical groundwater and PSH gauging results is provided in Table 1 in Appendix B.

### 3.1.4 Groundwater Analytical Results

During the March 2020 event, groundwater samples were collected from eighteen (18) monitor wells: MW-3A, MW-4A, MW-5 through MW-13, and MW-17 through MW-23.

Laboratory analytical results of the groundwater samples exhibited the following findings:

- Benzene concentrations ranged from less than the laboratory method detection limit (MDL) in wells MW-3A, MW-4A, MW-8, MW-11, MW-12, MW-13, MW-17, MW-18, MW-22, and MW-23 to 0.246 mg/L in MW-9. Benzene concentrations exceeded the NMWQCC groundwater standard of 0.010 mg/L in groundwater samples collected from monitor wells MW-6, MW-7, MW-9.
- Toluene concentrations ranged from less than the laboratory MDL in wells MW-3A, MW-4A, MW-8, MW-10 through MW-13, MW-17, MW-18, MW-19, MW-22, and MW-23 to 0.00730 mg/L in MW-7. Toluene concentrations did not exceed the NMWQCC groundwater standard of 0.750 mg/L in any of the monitor wells sampled during the quarter.
- Ethylbenzene concentrations ranged from less than the laboratory MDL in wells MW-3A, MW-4A, MW-6, MW-8, MW-11, MW-12, MW-13, MW-17, MW-22 and MW-23 to 0.0718 mg/L in MW-9. Ethylbenzene concentrations did not exceed the NMWQCC groundwater standard of 0.750 mg/L in any of the monitor wells sampled during the quarter.
- Xylene concentrations ranged from less than the laboratory MDL in wells MW-3A, MW-4A, MW-8, MW-11, MW-12, MW-13, MW-17, MW-19, MW-22, and MW-23 to 0.137 mg/L in MW-9. Xylene concentrations did not exceed the NMWQCC groundwater standard of 0.620 mg/L in any of the monitor wells sampled during the quarter.
- Naphthalene concentrations ranged from less than the laboratory MDL in wells MW-6, MW-7, MW-8, MW-18, MW-22, and MW-23 to 0.00573 mg/L in MW-9. The naphthalene concentrations did not exceed the NMWQCC groundwater standard of 0.030 mg/L in any wells sampled.
- Benzo(a)pyrene concentrations were less than the laboratory MDL in all of the sampled wells. The benzo(a)pyrene concentrations did not exceed the NMWQCC groundwater standard of 0.007 mg/L this quarter.

During the June 2020 event, groundwater samples were collected from seventeen (17) monitor wells: MW-3A, MW-4A, MW-5 through MW-13, MW-17 through MW-20, MW-22, and MW-23.

Laboratory analytical results of the groundwater samples exhibited the following findings:

- Benzene concentrations ranged from less than the laboratory MDL in wells MW-3A, MW-4A, MW-10, and MW-11 to 0.158 mg/L in MW-9. Benzene concentrations

exceeded the NMWQCC groundwater standard of 0.010 mg/L in groundwater samples collected from monitor wells MW-7 and MW-9.

- Toluene concentrations ranged from less than the laboratory MDL in all wells except for MW-5 which had a concentration of 0.00206 mg/L, MW-6 had a concentration of 0.00376 mg/L, MW-7 had a concentration of 0.00183 mg/L, and MW-17 had a concentration of 0.000500 mg/L. Toluene concentrations did not exceed the NMWQCC groundwater standard of 0.750 mg/L in any of the monitor wells sampled during the quarter.
- Ethylbenzene concentrations ranged from less than the laboratory MDL in all wells except for MW-7 which had a concentration of 0.0288 mg/L and MW-9 with a concentration of 0.0493 mg/L. Ethylbenzene concentrations did not exceed the NMWQCC groundwater standard of 0.750 mg/L in any of the monitor wells sampled during the quarter.
- Xylene concentrations ranged from less than the laboratory MDL in all wells except for MW-7 which had a concentration of 0.0496 mg/L and MW-9 with a concentration of 0.0856 mg/L. Xylene concentrations did not exceed the NMWQCC groundwater standard of 0.620 mg/L in any of the monitor wells sampled during the quarter.

During the September 2020 event, groundwater samples were collected from seventeen (17) monitor wells: MW-3A, MW-4A, MW-5, MW-6, MW-8 through MW-13, MW-17 through MW-20, MW-21A, MW-22, and MW-23.

Laboratory analytical results of the groundwater samples exhibited the following findings:

- Benzene concentrations ranged from 0.00468 mg/L in MW-21A to 0.0726 mg/L in MW-9. Benzene concentrations exceeded the NMWQCC groundwater standard of 0.010 mg/L in groundwater samples collected from monitor wells MW-9, MW-10, MW-12, MW-13, MW-22, and MW-23.
- Toluene concentrations ranged from less than the laboratory MDL in all wells except for MW-5 which had a concentration of 0.00268 mg/L, MW-6 with a concentration of 0.00215 mg/L, MW-9 with a concentration of 0.00124 mg/L, and MW-22 with a concentration of 0.000570 mg/L. Toluene concentrations did not exceed the NMWQCC groundwater standard of 0.750 mg/L in any of the monitor wells sampled during the quarter.
- Ethylbenzene concentrations ranged from less than the laboratory MDL in all wells except for MW-9 which had a concentration of 0.0139 mg/L, MW-12 with a concentration of 0.00196 mg/L, MW-22 with a concentration of 0.00296 mg/L, and MW-23 with a concentration of 0.00178 mg/L. Ethylbenzene concentrations did not exceed the NMWQCC groundwater standard of 0.750 mg/L in any of the monitor wells sampled during the quarter.

- Xylene concentrations ranged from less than the laboratory MDL in all wells except for MW-9 which had a concentration of 0.0270 mg/L and MW-12 with a concentration of 0.000850 mg/L. Xylene concentrations did not exceed the NMWQCC groundwater standard of 0.620 mg/L in any of the monitor wells sampled during the quarter.

During the December 2020 event, groundwater samples were collected from eighteen (18) monitor wells: MW-3A, MW-4A, MW-5 through MW-13, MW-17 through MW-20, MW-21A, MW-22, and MW-23.

Laboratory analytical results of the groundwater samples collected exhibited the following findings:

- Benzene concentrations ranged from 0.000590 mg/L in MW-10 to 0.154 mg/L in MW-9. Benzene concentrations exceeded the NMWQCC groundwater standard of 0.010 mg/L in groundwater samples collected from monitor wells MW-6 and MW-9.
- Toluene concentrations ranged from less than the laboratory MDL in MW-19 to 0.0217 mg/L in MW-6. Toluene concentrations did not exceed the NMWQCC groundwater standard of 0.750 mg/L in any of the monitor wells sampled during the quarter.
- Ethylbenzene concentrations ranged from less than the laboratory MDL in wells MW-3A, MW-4A, MW-10 through MW-12, MW-19, MW-20, and MW-22 to 0.0359 mg/L in MW-9. Ethylbenzene concentrations did not exceed the NMWQCC groundwater standard of 0.750 mg/L in any of the monitor wells sampled during the quarter.
- Xylene concentrations ranged from less than the laboratory MDL in MW-13 to 0.04010 mg/L in MW-9. Xylene concentrations did not exceed the NMWQCC groundwater standard of 0.620 mg/L in any of the monitor wells.

The results of the BTEX analysis are summarized in Table 2 – Summary of Historical Groundwater Analytical Results – BTEX and results of the PAH analyses are summarized in Table 3 – Summary of Historical Groundwater Analytical Results – PAH Supplement in Appendix B. Laboratory analytical data reports and chain of custody documentation for all samples are provided in Appendix C.

### 3.2 Groundwater Monitoring Well Installation

One (1) 4-inch diameter replacement monitor well for MW-21 was installed on September 2, 2020.

Talon supervised the advancement, installation, and sampling of the 4-inch diameter monitor well using mud rotary techniques. The well was installed to replace a destroyed well that occurred between the first and second quarterly monitoring events. The location of the monitor well is presented on Figure 1. The monitor well was installed by a licensed State of

New Mexico well driller. State of New Mexico Well Reports and Monitoring Well Logs are provided in Appendix D.

The monitoring well was constructed using flush-joint schedule 40, polyvinyl chloride (PVC) and factory slotted 0.010-inch screen. A sorted sand filter pack was placed around the screen from the bottom of the boring to approximately three (3) feet above the screened interval. Above the sand pack, a ninety-two (92) foot thick bentonite seal was set to prevent the migration of contaminants to the sampling zone from the surface, and the remainder of the well annulus was filled with cement. A locking upright steel protective cover was concreted into place to protect the well from damage and surface percolation. Well development was conducted prior to setting the bentonite seal, in order to settle the sand filter pack and to maximize the flow of groundwater into the well.

Completion details for the monitor well are provided in Appendix D.

## **4.0 CONCLUSIONS AND RECOMMENDATIONS**

---

The following section presents a summary of the four groundwater monitoring events conducted at the 8" Moore to Jal #2 site in 2020 and provides recommendations for future corrective actions.

### **4.1 Summary of Findings**

- The groundwater flow direction is to the south-southeast at an average gradient of 0.0035 feet per foot.
- In September 2020, 0.02 feet of PSH was observed in monitor well MW-7.
- During 2020, wells MW-6, MW-7, MW-9, MW-10, MW-12, MW-13, MW-22, and MW-23 exhibited benzene concentrations in excess of NMWQCC groundwater standards. The BTEX plume is well defined.
- 0.22 bbls of vapor PSH were extracted during the year 2020 via MDPE recovery.

### **4.2 Recommendations**

Based upon the results of the quarterly groundwater monitoring and PSH/groundwater recovery efforts, Talon proposes the following actions:

- Continue operation and maintenance of the groundwater recovery system.
- Perform quarterly groundwater monitoring events in accordance with NMOCD directives.
- Discontinue PAH sampling in groundwater monitoring wells MW-3A, MW-4A, MW-7, MW-8, MW-9, MW-18, MW-22 and MW-23. These wells have exhibited PAH concentrations below NMWQCC standards and/or laboratory method detection limits for at least two consecutive years. MW-6 will be sampled for PAH again in 2021.
- Request NMOCD allow a modification (reduction) in the sampling frequency from monitoring wells that have exhibited no evidence of contamination above regulatory limits for eight (8) consecutive quarters. Specifically, we are requesting that wells MW-11, MW-17, MW-18, MW-19, and MW-20 be sampled on a semi-annual basis only.

Specific Gravity: 0.75

Notes:

DR = Well dry

DS = Well destroyed

NG = Well not gauged

NL = Well not located

NSA = No access

OB = Obstruction in well

PA = Well plugged and abandoned

**Moore to Jal 2**

Project Address:

**David Adkins:**

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number(s) 656474. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 656474 will be filed for 45 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

A handwritten signature in black ink that reads "Jessica Kramer".

## Flagging Criteria

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.
- B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F** RPD exceeded lab control limits.
- J** The target analyte was positively identified below the quantitation limit and above the detection limit.
- U** Analyte was not detected.
- L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K** Sample analyzed outside of recommended hold time.
- JN** A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

\*\* Surrogate recovered outside laboratory control limit.

**BRL** Below Reporting Limit.      **ND** Not Detected.

**RL** Reporting Limit

**MDL** Method Detection Limit      **SDL** Sample Detection Limit      **LOD** Limit of Detection

**PQL** Practical Quantitation Limit      **MQL** Method Quantitation Limit      **LOQ** Limit of Quantitation

**DL** Method Detection Limit

**NC** Non-Calculable

**SMP** Client Sample      **BLK** Method Blank

**BKS/LCS** Blank Spike/Laboratory Control Sample      **BKSD/LCSD** Blank Spike Duplicate/Laboratory Control Sample Duplicate

**MD/SD** Method Duplicate/Sample Duplicate      **MS** Matrix Spike      **MSD:** Matrix Spike Duplicate

+ NELAC certification not offered for this compound.

\* (Next to analyte name or method description) = Outside XENCO's scope of NELAC accreditation

**Talon LPE-Artesia**

408 West Texas St.  
Artesia, NM 88210

Reference: XENCO Report No(s): **665005**

**Plains MTJ2**

Project Address: Lovington, New Mexico

**David Adkins:**

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number(s) 665005. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 665005 will be filed for 45 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

A handwritten signature in black ink that reads "Jessica Kramer".

---

## CASE NARRATIVE

**Client Name:** Talon LPE-Artesia

**Project Name:** Plains MTJ2

Project ID: 700376 045  
Work Order Number(s): 665005

Report Date: 06.26.2020  
Date Received: 06.19.2020

---

This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory.

**Sample receipt non conformances and comments:**

None

---

**Sample receipt non conformances and comments per sample:**

None

## Flagging Criteria

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.
- B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F** RPD exceeded lab control limits.
- J** The target analyte was positively identified below the quantitation limit and above the detection limit.
- U** Analyte was not detected.
- L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K** Sample analyzed outside of recommended hold time.
- JN** A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

\*\* Surrogate recovered outside laboratory control limit.

**BRL** Below Reporting Limit.      **ND** Not Detected.

**RL** Reporting Limit

**MDL** Method Detection Limit      **SDL** Sample Detection Limit      **LOD** Limit of Detection

**PQL** Practical Quantitation Limit      **MQL** Method Quantitation Limit      **LOQ** Limit of Quantitation

**DL** Method Detection Limit

**NC** Non-Calculable

**SMP** Client Sample      **BLK** Method Blank

**BKS/LCS** Blank Spike/Laboratory Control Sample      **BKSD/LCSD** Blank Spike Duplicate/Laboratory Control Sample Duplicate

**MD/SD** Method Duplicate/Sample Duplicate      **MS** Matrix Spike      **MSD:** Matrix Spike Duplicate

+ NELAC certification not offered for this compound.

\* (Next to analyte name or method description) = Outside XENCO's scope of NELAC accreditation

## SURROGATE RECOVERY STUDY

<b>BTEX by EPA 8021</b>		<b>Amount Found [A]</b>	<b>True Amount [B]</b>	<b>Recovery %R [D]</b>	<b>Control Limits %R</b>	<b>Flags</b>
<b>Analytes</b>						
1,4-Difluorobenzene		0.0229	0.0300	76	70-130	
4-Bromofluorobenzene		0.0350	0.0300	117	70-130	

\* Surrogate outside of Laboratory QC limits

\*\* Surrogates outside limits; data and surrogates confirmed by reanalysis

\*\*\* Poor recoveries due to dilution

Surrogate Recovery [D] = 100 \* A / B

All results are based on MDL and validated for QC purposes.

**XENCO Laboratories****Prelogin/Nonconformance Report- Sample Log-In****Client:** Talon LPE-Artesia

Acceptable Temperature Range: 0 - 6 degC

**Date/ Time Received:** 06.19.2020 04.00.00 PM

Air and Metal samples Acceptable Range: Ambient

**Work Order #:** 665005

Temperature Measuring device used : T-NM-007

<b>Sample Receipt Checklist</b>	<b>Comments</b>
#1 *Temperature of cooler(s)?	3
#2 *Shipping container in good condition?	Yes
#3 *Samples received on ice?	Yes
#4 *Custody Seals intact on shipping container/ cooler?	Yes
#5 Custody Seals intact on sample bottles?	Yes
#6*Custody Seals Signed and dated?	Yes
#7 *Chain of Custody present?	Yes
#8 Any missing/extra samples?	Yes
#9 Chain of Custody signed when relinquished/ received?	Extra sample was added to COC in lab, per client request. 6/22/20 EM
#10 Chain of Custody agrees with sample labels/matrix?	Yes
#11 Container label(s) legible and intact?	Yes
#12 Samples in proper container/ bottle?	Yes
#13 Samples properly preserved?	Yes
#14 Sample container(s) intact?	Yes
#15 Sufficient sample amount for indicated test(s)?	Yes
#16 All samples received within hold time?	Yes
#17 Subcontract of sample(s)?	Yes
#18 Water VOC samples have zero headspace?	Subbed ot Midland Yes

**\* Must be completed for after-hours delivery of samples prior to placing in the refrigerator**

Project Address: Hobbs, New Mexico

**David Adkins:**

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the Eurofins Xenco, LLC Report Number(s) 673272. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by Eurofins Xenco, LLC. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 673272 will be filed for 45 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting Eurofins Xenco, LLC to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

A handwritten signature in black ink that reads "Jessica Kramer".

Date Received: 09.22.2020

---

This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory.

**Sample receipt non conformances and comments:**

V1.001 Revision - Corrected sample ID to read MW-21A

---

**Sample receipt non conformances and comments per sample:**

None

**Analytical non conformances and comments:**

Batch: LBA-3138098 BTEX by EPA 8021

Lab Sample ID 673272-001 was randomly selected for Matrix Spike/Matrix Spike Duplicate (MS/MSD). Toluene, m,p-Xylenes, o-Xylene recovered above QC limits in the Matrix Spike Duplicate. Outlier/s are due to possible matrix interference. Samples in the analytical batch are: 673272-001, -002, -003, -004, -005, -006, -007, -008, -009, -010, -011, -012, -013, -014, -015, -016, -017.

The Laboratory Control Sample for Toluene, m,p-Xylenes, o-Xylene is within laboratory Control Limits, therefore the data was accepted.

Surrogate 4-Bromofluorobenzene recovered above QC limits Data confirmed by re-analysis. Samples affected are: 7712069-1-BKS, 7712069-1-BSD, 673272-001 S, 673272-001 SD, 673272-008, 673272-017, 673272-010, 673272-011, 673272-013, 673272-014, 673272-015, 673272-016, 673272-007, 673272-006, 673272-004, 673272-001, 673272-009.

## Flagging Criteria

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.
- B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F** RPD exceeded lab control limits.
- J** The target analyte was positively identified below the quantitation limit and above the detection limit.
- U** Analyte was not detected.
- L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K** Sample analyzed outside of recommended hold time.
- JN** A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

\*\* Surrogate recovered outside laboratory control limit.

**BRL** Below Reporting Limit.      **ND** Not Detected.

**RL** Reporting Limit

**MDL** Method Detection Limit      **SDL** Sample Detection Limit      **LOD** Limit of Detection

**PQL** Practical Quantitation Limit      **MQL** Method Quantitation Limit      **LOQ** Limit of Quantitation

**DL** Method Detection Limit

**NC** Non-Calculable

**SMP** Client Sample      **BLK** Method Blank

**BKS/LCS** Blank Spike/Laboratory Control Sample      **BKSD/LCSD** Blank Spike Duplicate/Laboratory Control Sample Duplicate

**MD/SD** Method Duplicate/Sample Duplicate      **MS** Matrix Spike      **MSD:** Matrix Spike Duplicate

+ NELAC certification not offered for this compound.

Notice: Signature of this document and relinquishment of samples constitutes a valid purchase order from client company to Xenco, its affiliates and subcontractors. It assigns standard terms and conditions of service. Xenco will be liable only for the cost of samples and shall not assume any responsibility for any losses or expenses incurred by the client if such losses are due to circumstances beyond the control of Xenco. A minimum charge of \$75.00 will be applied to each project and a charge of \$5 for each sample submitted to Xenco, but not analyzed. These terms will be enforced unless previously negotiated.

Project Address: Hobbs, New Mexico

**David Adkins:**

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the Eurofins Xenco, LLC Report Number(s) 679989. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by Eurofins Xenco, LLC. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 679989 will be filed for 45 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting Eurofins Xenco, LLC to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

A handwritten signature in black ink that reads "Jessica Kramer".

# CASE NARRATIVE

**Client Name: Talon LPE-Artesia**  
**Project Name: Plains Moore To Jal 2**

Project ID: 700376 045 04  
Work Order Number(s): 679989

Report Date: 12.14.2020  
Date Received: 12.07.2020

---

This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory.

**Sample receipt non conformances and comments:**

---

**Sample receipt non conformances and comments per sample:**

None

**Analytical non conformances and comments:**

Batch: LBA-3144379 BTEX by EPA 8021

Surrogate 1,4-Difluorobenzene recovered above QC limits . Samples affected are: 7716761-1-BSD,679910-011 S,679910-011 SD,679989-004,679989-003,679989-002,679989-005,679989-001.

Batch: LBA-3144492 BTEX by EPA 8021

Surrogate 4-Bromofluorobenzene recovered above QC limits. Matrix interferences is suspected; Samples affected are: 679989-011,679989-015.

Surrogate 1,4-Difluorobenzene recovered above QC limits. Samples affected are: 7716821-1-BKS,7716821-1-BSD,679910-001 S,679910-001 SD,679989-009,679989-008,679989-007,679989-006,679989-010,679989-018,679989-012,679989-013,679989-015,679989-016,679989-017.

Batch: LBA-3144538 BTEX by EPA 8021

Toluene RPD was outside laboratory control limits.

Samples in the analytical batch are: 679989-014

Surrogate 1,4-Difluorobenzene recovered above QC limits . Samples affected are: 7716864-1-BKS,7716864-1-BSD,680330-001 S,680330-001 SD.

Surrogate 4-Bromofluorobenzene recovered above QC limits . Samples affected are: 7716864-1-BSD,679989-014.

Sample Id: **7716864-1-BLK**

Matrix: Water

Sample Depth:

Lab Sample Id: 7716864-1-BLK

Date Collected:

Date Received:

Analytical Method: BTEX by EPA 8021

Prep Method: 5030B

Analyst: MNR

% Moist:

Seq Number: 3144538

Date Prep: 12.10.2020 15:00

Tech: MNR

Subcontractor: SUB: T104704400-20-21

Prep seq: 7716864

Parameter	CAS Number	Result	MQL	SDL	Units	Analysis Date	Flag	Dil Factor
Benzene	71-43-2	<0.000408	0.00200	0.000408	mg/L	12.11.2020 04:42	U	1
Toluene	108-88-3	<0.000367	0.00200	0.000367	mg/L	12.11.2020 04:42	U	1
Ethylbenzene	100-41-4	<0.000657	0.00200	0.000657	mg/L	12.11.2020 04:42	U	1
m,p-Xylenes	179601-23-1	<0.000630	0.00400	0.000630	mg/L	12.11.2020 04:42	U	1
o-Xylene	95-47-6	<0.000642	0.00200	0.000642	mg/L	12.11.2020 04:42	U	1

Surrogate	% Recovery	Limits	Units	Analysis Date	Flag
1,4-Difluorobenzene	90	70 - 130	%		
4-Bromofluorobenzene	105	70 - 130	%		

## Flagging Criteria

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.
- B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F** RPD exceeded lab control limits.
- J** The target analyte was positively identified below the quantitation limit and above the detection limit.
- U** Analyte was not detected.
- L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K** Sample analyzed outside of recommended hold time.
- JN** A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

\*\* Surrogate recovered outside laboratory control limit.

**BRL** Below Reporting Limit.      **ND** Not Detected.

**RL** Reporting Limit

**MDL** Method Detection Limit      **SDL** Sample Detection Limit      **LOD** Limit of Detection

**PQL** Practical Quantitation Limit      **MQL** Method Quantitation Limit      **LOQ** Limit of Quantitation

**DL** Method Detection Limit

**NC** Non-Calculable

**SMP** Client Sample      **BLK**      Method Blank

**BKS/LCS** Blank Spike/Laboratory Control Sample      **BKSD/LCSD** Blank Spike Duplicate/Laboratory Control Sample Duplicate

**MD/SD** Method Duplicate/Sample Duplicate      **MS**      Matrix Spike      **MSD:** Matrix Spike Duplicate

+ NELAC certification not offered for this compound.

\* (Next to analyte name or method description) = Outside XENCO's scope of NELAC accreditation

Notice: Signature of this document and relinquishment of samples constitutes a valid purchase order from client company to Xenco, its affiliates and subcontractors. It assigns standard terms and conditions of service. Xenco will be liable only for the cost of samples and shall not assume any responsibility for any losses or expenses incurred by the client if such losses are due to circumstances beyond the control of Xenco. A minimum charge of \$75.00 will be applied to each project and a charge of \$5 for each sample submitted to Xenco, but not analyzed. These terms will be enforced unless previously negotiated.
