| Steps taken to limit the duration and magnitude of vent or flare   | Tap Rock saw a higher-than-normal flare volume due to high line pressure from our midstream provider. Lucid is performing work on their Red Hills station causing high line pressure. Wells were choked back but flaring increased. Tap Rock is analyzing this location and the equipment on location to verify the facility can capture all excess gas. If flaring continues Tap Rock will alter the facility by placing additional gas takeaway equipment. |
