Steps and Actions to Prevent Waste	
For this event, this operator could not have reasonably anticipated the current event and it was beyond this operator's control	True
Please explain reason for why this event was beyond this operator's control	Tap Rock saw a higher-than-normal flare volume due to downtime on the oil tank flare valve. Tap Rock also saw flare volumes due to flash gas coming off the tanks and an excess amount of oxygen at the tank level. The amount of oxygen does not meet pipeline quality specifications for our midstream provider. Tap Rock is analyzing this location and the equipment on location to verify the facility can capture all excess gas. I&E has parts on order. If flaring continues Tap Rock will alter the facility by placing additional gas takeaway equipment.
