UPSET FLARING EVENT SPECIFIC JUSTIFICATIONS FORM**Facility:** Lost Tank 18 CPF**Flare Date:** 10/07/2022**Duration of event:** 28 Minutes**MCF Flared:** 340**Start Time:** 06:47 AM**End Time:** 07:15 AM**Cause:** Third-Party Unplanned > Lost Tank 13 Boo CS > Compression Equipment Issues**Method of Flared Gas Measurement:** Gas Flare Meter**Comments:****1. Reason why this event was beyond Operator's control:**

The emissions event was caused by the unforeseen, unexpected, sudden, and unavoidable interruption, restriction, or complete shut-in of a gas pipeline by a third-party pipeline compressor station operator, which impacted Oxy's ability to send gas to them. This interruption, restriction, or complete shut-in of the gas pipeline by a third-party pipeline compression station operator is downstream of Oxy's custody transfer point and out of Oxy's control to foresee, avoid or prevent from happening and did not stem from any of Oxy's upstream facility activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and preventative maintenance practices. In this case, third party owned and operated compressor station, Lost Tank Boo 13 CS, had compression equipment issues, which then prompted all their compressors to shut down suddenly. The loss of compression equipment at the Lost Tank 13 Boo station caused Oxy's Lost Tank 18 Central Processing Facility to pressure up and a flaring event to occur and cause subsequent intermittent flaring to occur. This event is out of OXY's control, yet OXY made every effort to control and minimize emissions as much as possible.

Steps Taken to limit duration and magnitude of venting or flaring:

It is OXY's policy to route its stranded gas to a flare during an unforeseen and unavoidable emergency or malfunction, that is beyond Oxy's control to avoid, prevent or foresee, to minimize emissions as much as possible as part of the overall steps taken to limit duration and magnitude of flaring. The flare at this facility has a 98% combustion efficiency to lessen emissions as much as possible. In this case, third party owned and operated compressor station, Lost Tank Boo 13 CS, had compression equipment issues, which then prompted all their compressors to shut down suddenly. The loss of compression equipment at the Lost Tank 13 Boo station caused Oxy's Lost Tank 18 Central Processing Facility to pressure up and a flaring event to occur, and until USA Compression could stabilize their compression equipment and keep them running. As soon as the Oxy production techs, who were on-site, saw flaring occur, they immediately called USA Compression Lost Tank Boo 13 station personnel to determine cause and were informed that they were having issues which was affecting their compression equipment. Soon after flaring began, USA Compression personnel informed the Oxy production techs who were on-site that several compressors were restarted. Oxy production tech made arrangements with Oxy's flowback personnel to choke several wells, so that the pressure would fall below the flare setpoints of the Lost Tank 18 Central Processing Facility, and flaring would cease.

3. Corrective Actions taken to eliminate the cause and reoccurrence of venting or flaring:

Oxy cannot take any corrective actions to eliminate the cause and potential reoccurrence of a third-party compressor station operated restriction or shut-in, as this control issue is downstream of Oxy's custody transfer point and out of Oxy's control to avoid, prevent from happening or reoccurring. Third-party downstream compression station operators may have equipment issues which will reoccur from time to time and may prompt a spike in their gas line pressure, which in turn, directly impacts Oxy's ability to send gas to them, which then triggers a flaring event. OXY makes every effort to control and minimize emissions as much as possible. The only actions that Oxy can take and handle that is within its control, is to keep continually communicate with USA Compression, who owns the Lost Tank Boo 13 Compressor Station, when possible, during these types of situations.

QUESTIONS

Action 156427

QUESTIONS

Operator: OXY USA INC P.O. Box 4294 Houston, TX 772104294	OGRID: 16696
	Action Number: 156427
	Action Type: [C-129] Venting and/or Flaring (C-129)

QUESTIONS

Prerequisites	
Any messages presented in this section, will prevent submission of this application. Please resolve these issues before continuing with the rest of the questions.	
Incident Well	Unavailable.
Incident Facility	[fAPP2226965761] Lost Tank 18 CPF

Determination of Reporting Requirements

Answer all questions that apply. The Reason(s) statements are calculated based on your answers and may provide additional guidance.

Was this vent or flare caused by an emergency or malfunction	Yes
Did this vent or flare last eight hours or more cumulatively within any 24-hour period from a single event	No
Is this considered a submission for a vent or flare event	Yes, minor venting and/or flaring of natural gas.
An operator shall file a form C-141 instead of a form C-129 for a release that, includes liquid during venting and/or flaring that is or may be a major or minor release under 19.15.29.7 NMAC.	
Was there at least 50 MCF of natural gas vented and/or flared during this event	Yes
Did this vent or flare result in the release of ANY liquids (not fully and/or completely flared) that reached (or has a chance of reaching) the ground, a surface, a watercourse, or otherwise, with reasonable probability, endanger public health, the environment or fresh water	No
Was the vent or flare within an incorporated municipal boundary or within 300 feet from an occupied permanent residence, school, hospital, institution or church in existence	No

Equipment Involved

Primary Equipment Involved	Other (Specify)
Additional details for Equipment Involved. Please specify	Emergency Flare > Third-Party Unplanned > Lost Tank 13 Boo CS > Compression Equipment Issues > Instrument Air

Representative Compositional Analysis of Vented or Flared Natural Gas

Please provide the mole percent for the percentage questions in this group.

Methane (CH4) percentage	72
Nitrogen (N2) percentage, if greater than one percent	4
Hydrogen Sulfide (H2S) PPM, rounded up	4
Carbon Dioxide (CO2) percentage, if greater than one percent	0
Oxygen (O2) percentage, if greater than one percent	0

If you are venting and/or flaring because of Pipeline Specification, please provide the required specifications for each gas.

Methane (CH4) percentage quality requirement	Not answered.
Nitrogen (N2) percentage quality requirement	Not answered.
Hydrogen Sulfide (H2S) PPM quality requirement	Not answered.
Carbon Dioxide (CO2) percentage quality requirement	Not answered.
Oxygen (O2) percentage quality requirement	Not answered.

QUESTIONS (continued)

Operator: OXY USA INC P.O. Box 4294 Houston, TX 772104294	OGRID: 16696
	Action Number: 156427
	Action Type: [C-129] Venting and/or Flaring (C-129)

QUESTIONS

Date(s) and Time(s)	
Date vent or flare was discovered or commenced	10/07/2022
Time vent or flare was discovered or commenced	06:47 AM
Time vent or flare was terminated	07:15 AM
Cumulative hours during this event	0

Measured or Estimated Volume of Vented or Flared Natural Gas	
Natural Gas Vented (Mcf) Details	<i>Not answered.</i>
Natural Gas Flared (Mcf) Details	Cause: Other Other (Specify) Natural Gas Flared Released: 340 Mcf Recovered: 0 Mcf Lost: 340 Mcf.
Other Released Details	<i>Not answered.</i>
Additional details for Measured or Estimated Volume(s). Please specify	Gas Flare Report
Is this a gas only submission (i.e. only significant Mcf values reported)	Yes, according to supplied volumes this appears to be a "gas only" report.

Venting or Flaring Resulting from Downstream Activity	
Was this vent or flare a result of downstream activity	No
Was notification of downstream activity received by this operator	<i>Not answered.</i>
Downstream OGRID that should have notified this operator	<i>Not answered.</i>
Date notified of downstream activity requiring this vent or flare	<i>Not answered.</i>
Time notified of downstream activity requiring this vent or flare	<i>Not answered.</i>

Steps and Actions to Prevent Waste	
For this event, this operator could not have reasonably anticipated the current event and it was beyond this operator's control.	True
Please explain reason for why this event was beyond this operator's control	The emissions event was caused by the unforeseen, unexpected, sudden, and unavoidable interruption, restriction, or complete shut-in of a gas pipeline by a third-party pipeline compressor station operator, which impacted Oxy's ability to send gas to them. This interruption, restriction, or complete shut-in of the gas pipeline by a third-party pipeline compression station operator is downstream of Oxy's custody transfer point and out of Oxy's control to foresee, avoid or prevent from happening and did not stem from any of Oxy's upstream facility activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and preventative maintenance practices. In this case, third party owned and operated compressor station, Lost Tank Boo 13 CS, had compression equipment issues, which then prompted all their compressors to shut down suddenly. The loss of compression equipment at the Lost Tank 13 Boo station caused Oxy's Lost Tank 18 Central Processing Facility to pressure up and a flaring event to occur and cause subsequent intermittent flaring to occur. This event is out of OXY's control, yet OXY made every effort to control and minimize emissions as much as possible.
Steps taken to limit the duration and magnitude of vent or flare	It is OXY's policy to route its stranded gas to a flare during an unforeseen and unavoidable emergency or malfunction, that is beyond Oxy's control to avoid, prevent or foresee, to minimize emissions as much as possible as part of the overall steps taken to limit duration and magnitude of flaring. The flare at this facility has a 98% combustion efficiency to lessen emissions as much as possible. In this case, third party owned and operated compressor station, Lost Tank Boo 13 CS, had compression equipment issues, which then prompted all their compressors to shut down suddenly. The loss of compression equipment at the Lost Tank 13 Boo station caused Oxy's Lost Tank 18 Central Processing Facility to pressure up and a flaring event to occur, and until USA Compression could stabilize their compression equipment and keep them running. As soon as the Oxy production techs, who were on-site, saw flaring occur, they immediately called USA Compression Lost Tank Boo 13 station personnel to determine cause and were informed that they were having issues which was affecting their compression equipment. Soon after flaring began, USA Compression personnel informed the Oxy production techs who were on-site that several compressors were restarted. Oxy production tech made arrangements with Oxy's flowback personnel to choke several wells, so that the pressure would fall below the flare setpoints of the Lost Tank 18 Central Processing Facility, and flaring would cease.
Corrective actions taken to eliminate the cause and reoccurrence of vent or flare	Oxy cannot take any corrective actions to eliminate the cause and potential reoccurrence of a third-party compressor station operated restriction or shut-in, as this control issue is downstream of Oxy's custody transfer point and out of Oxy's control to avoid, prevent from happening or reoccurring. Third-party downstream compression station operators may have equipment issues which will reoccur from time to time and may prompt a spike in their gas line pressure, which in turn, directly impacts Oxy's ability to send gas to them, which then triggers a flaring event. OXY makes every effort to control and minimize emissions as much as possible.
