INTRODUCTION & BACKGROUND INFORMATION

TRC Environmental Corporation (TRC), on behalf of COG Operating, LLC (COG), has prepared this *Remediation Summary and Site Closure Request* for two (2) releases at the Site known as the SRO State Com #002H (the Site). The legal description of the Site is Unit Letter "P", Section 32, Township 25 South, Range 28 East, in Eddy County, New Mexico. The subject property is owned by the State of New Mexico and administered by New Mexico State Land Office (NMSLO). The GPS coordinates for the Site are N 32.080101° W 104.1018906°. A topographical map is provided as **Figure 1**. Photographs are provided in the photolog as **Appendix B**.

On November 30, 2017, COG discovered a produced water release had occurred at the Site. The Release was attributed to the failure of a "two (2) to one (1) swedge", which resulted in the release of produced water inside the facility's secondary lined containment and onto the adjacent caliche production pad. On the discovery date, COG notified the New Mexico Oil and Conservation Division (NMOCD) and New Mexico State Land Office (NMSLO) of the Release and the Release was assigned an NMOCD Reference number of 2RP-4510. During initial response activities, a vacuum truck was dispatched to recover all freestanding fluids. On December 1, 2017, the initial Release Notification and Corrective Action (Form C-141) was submitted and indicated thirty (30) barrels (bbls) of produced water was released with approximately twenty-eight (28) bbls of produced water recovered. The release affected an area measuring approximately one thousand and fifty (1,050) sq. ft. The majority of the release was confined within the facility's secondary lined containment, with the exception of two (2) areas which affected the adjacent caliche production pad. The two (2) areas of exception include an area to the north of the lined containment measuring approximately one hundred and forty-seven (147) sq. ft. and an area to the south of the lined containment measuring approximately two hundred and twenty-one (221) sq. ft.

On July 15, 2018, COG discovered a produced water release had occurred at the Site. The Release was attributed to lightning striking the overflow water tank, which resulted in a fire which destroyed the facility and released produced water onto the caliche production pad and adjacent pasture area. On the discovery date, COG notified the NMOCD and NMSLO of the Release and was assigned an NMOCD Reference number of 2RP-4862. During initial response activities, a vacuum truck was dispatched to recover all freestanding fluids. On July 17, 2018 the initial Release Notification and Corrective Action (Form C-141) was submitted and indicated one hundred and ninety (190) barrels (bbls) of produced water was released with approximately one hundred and eighty (180) bbls of produced water recovered. The Release affected an area measuring approximately ten thousand and fifty-three (10,053) sq. ft. The majority of the release affected the caliche production pad, with the exception of one (1) area north of the pad in the pasture measuring approximately three hundred and seventy-four (374) sq. ft. Copies of the submitted Form C-141 for each Release are provided in **Appendix C**.

A groundwater database maintained by The New Mexico Office of the State Engineer (NMOSE) did not identify any registered water wells in Section 32, Township 25 South, Range 28 East. A reference map utilized by the NMOCD indicates groundwater should be encountered at approximately twenty-five (25) feet below ground surface (bgs). No water wells were observed within one-thousand (1,000) feet of the Site. No surface water was observed within one-thousand (1,000) feet of the release.

Based on the depth to groundwater, the NMOCD Closure Criteria for Soils Impacted by a Release for the SRO State Com #002H are as follows:

- Benzene – 10 mg/kg
- Benzene, toluene, ethylbenzene, and xylenes (BTEX) – 50 mg/kg
- Total Petroleum Hydrocarbons (TPH) – 100 mg/kg
- Chloride – 600 mg/kg

INITIAL INVESTIGATION AND PROPOSED REMEDIATION WORKPLAN

The July 15, 2018 Release and subsequent fire caused major site destruction. The tank battery was inoperable and the Releases associated with incident report numbers 2RP-4510 and 2RP-4862 were remediated simultaneously. For the remainder of this report the information will be representative of the investigation and remediation completed in association with 2RP-4862, as the footprint of release 2RP-4862 included the footprint of release 2RP-4510. Additional information regarding the initial investigation for the Release associated with 2RP-4510 will be provided as **Appendix D – Investigation Summary and Proposed Remediation Workplan (2RP-4510).**

On August 15, 2018, an initial investigation was conducted at the Release Site. During the initial investigation, eight (8) augerholes (SP1, SP2, SP3, SP4, SP5, SP6, SP7, and SP8) were advanced at the Release Site in an effort to characterize the vertical extent of soil impact. In addition, four (4) surface samples (North, South, East and West) were collected at the inferred margins of the Release area to characterize the lateral extent of soil impact. Please reference **Figure 2B – Site & Sample Location Map – Initial Investigation (2RP-4862)**.

Augerhole SP1 was advanced in the southwest corner of the facility. During the advancement of the augerhole, three (3) soil samples (SP1 @ Surface, SP1 @ 1', and SP1 @ 2') were collected and submitted to the laboratory for analysis of BTEX, TPH and/or chloride concentrations. Laboratory analytical results indicated BTEX constituents in all samples were below the laboratory method detection limit (MDL), TPH concentrations were below the NMOCD regulatory guidelines in SP1 @ 2' and chloride concentrations were below NMOCD regulatory guidelines in SP1 @ 1' and SP1 @ 2'. Based on laboratory analytical results, soil was not affected above the NMOCD regulatory guidelines for BTEX constituents, TPH, or chloride beyond two (2) ft. bgs in the area characterized by augerhole SP1.

Augerhole SP2 was advanced outside of the bermed facility to the west. During the advancement of the augerhole, four (4) soil samples (SP2 @ Surface, SP2 @ 1', SP2 @ 2', and SP2 @ 3') were collected and submitted to the laboratory for analysis of BTEX, TPH and/or chloride concentrations. Laboratory analytical results indicated BTEX constituents in all samples analyzed for BTEX were below the laboratory MDL, TPH concentrations were below the laboratory MDL in all samples analyzed for TPH, and chloride concentrations were below NMOCD regulatory guidelines in SP2 @ 3'. Based on laboratory analytical results, soil was not affected above the NMOCD regulatory guidelines for BTEX constituents, TPH or chloride beyond three (3) ft. bgs in the area characterized by augerhole SP2.

Augerhole SP3 was advanced outside of the bermed facility to the northwest. During the advancement of the augerhole, four (4) soil samples (SP3 @ Surface, SP3 @ 1' SP3 @ 2', and SP3 @ 3') were collected and submitted to the laboratory for analysis of BTEX, TPH and/or chloride concentrations. Laboratory analytical results indicated BTEX constituents in all samples analyzed for BTEX were below the laboratory MDL, TPH concentrations were below the NMOCD regulatory guidelines in SP3 @ 1', and chloride concentrations were below NMOCD regulatory guidelines in SP3 @ 2' and SP3 @ 3'. Based on laboratory analytical results, soil was not affected above the NMOCD regulatory guidelines for BTEX constituents, TPH or chloride beyond two (2) ft. bgs in the area characterized by augerhole SP3.

Augerhole SP4 was advanced outside of the bermed facility to the north. During the advancement of the augerhole, three (3) soil samples (SP4 @ Surface, SP4 @ 1', and SP4 @ 2') were collected and submitted to the laboratory for analysis of BTEX, TPH and/or chloride concentrations. Laboratory analytical results indicated BTEX constituents in all samples analyzed for BTEX were below the laboratory MDL, TPH concentrations were below the NMOCD regulatory guidelines in SP4 @ 1' and SP4 @ 2', and chloride concentrations were below NMOCD regulatory guidelines in SP4 @ 1' and SP4 @ 2'. Based on laboratory analytical results, soil was not affected above the NMOCD regulatory guidelines for BTEX constituents, TPH or chloride beyond one (1) ft. bgs in the area characterized by augerhole SP4.

Augerhole SP5 was advanced north of SP4 in the pastureland. During the advancement of the augerhole, three (3) soil samples (SP5 @ Surface, SP5 @ 1' and SP5 @ 2') were collected and submitted to the laboratory for analysis of BTEX, TPH and/or chloride concentrations. Laboratory analytical results indicated BTEX constituents and TPH in all samples were below the laboratory MDL, and chloride concentrations were below NMOCD regulatory guidelines in SP5 @ 1' and SP5 @ 2'. Based on laboratory analytical results, soil was not affected above the NMOCD regulatory guidelines for BTEX constituents, TPH or chloride beyond the surface in the area characterized by augerhole SP5.

Augerhole SP6 was advanced inside the bermed facility between the two (2) easternmost steel tanks. During the advancement of the augerhole, two (2) soil samples (SP6 @ Surface and SP6 @ 1') were collected and submitted to the laboratory for analysis of BTEX, TPH and/or chloride concentrations. Laboratory analytical results indicated BTEX constituents and TPH in all samples were below the laboratory MDL, and chloride concentrations were below NMOCD regulatory guidelines in all samples collected from augerhole SP6. Based on laboratory analytical results, soil was not affected above the NMOCD regulatory limits for BTEX constituents, TPH or chloride at any depth characterized by augerhole SP6.

Augerhole SP7 was advanced inside the bermed facility east of the steel tanks. During the advancement of the augerhole, five (5) soil samples (SP7 @ Surface, SP7 @ 1', SP7 @ 2', SP7 @ 3', and SP7 @ 4') were collected and submitted to the laboratory for analysis of BTEX, TPH and/or chloride concentrations. Laboratory analytical results indicated BTEX constituents and TPH in all samples were below the laboratory MDL, and chloride concentrations were below NMOCD regulatory guidelines in SP7 @ 3' and SP7 @ 4'. Based on laboratory analytical results, soil was not affected above the NMOCD regulatory guidelines for BTEX constituents, TPH or chloride beyond three (3) ft. bgs in the area characterized by augerhole SP7.

Augerhole SP8 was advanced outside the bermed facility to the south. During the advancement of the augerhole, three (3) soil samples (SP8 @ Surface, SP8 @ 1', and SP8 @ 2') were collected and submitted to the laboratory for analysis of BTEX, TPH and/or chloride concentrations. Laboratory analytical results indicated BTEX constituents and TPH in all samples were below the laboratory MDL, and chloride concentrations were below NMOCD regulatory guidelines in SP8 @ 2'. Based on laboratory analytical results, soil was not affected above the NMOCD regulatory guidelines for BTEX constituents, TPH or chloride beyond two (2) ft. bgs in the area characterized by augerhole SP8.

In addition, four (4) surface samples (North @ Surface, East @ Surface, South @ Surface, and West @ Surface) were collected at the inferred edges of the affected area in an effort to characterize the horizontal extent of soil impacts. The samples were collected and submitted to the laboratory for analysis of BTEX, TPH, and chloride concentrations. Laboratory analytical results indicated BTEX constituents, TPH and chloride concentrations were each below the applicable NMOCD regulatory guideline values in each submitted soil sample. Based on laboratory analytical results, no further horizontal or vertical delineation was warranted.

On September 28, 2018, COG submitted a *Soil Investigation Summary and Proposed Remediation Workplan (Workplan)* to the NMOCD and NMSLO, proposing the following remediation activities designed to advance the Site toward an approved closure:

- Utilizing mechanical equipment, excavate impacted soil within the release margins in the areas characterized by SP1, SP5 and SP6 to a depth of approximately six (6) inches bgs, the area characterized by SP4 to a depth of approximately twelve (12) inches bgs, the area characterized by SP8 to a depth of approximately eighteen (18) inches bgs, the areas characterized by SP2 and SP3 to a depth of approximately twenty-four (24) inches bgs and the area characterized by SP7 to a depth of approximately thirty (30) inches bgs. Excavated soil will be stockpiled on-site, atop an impermeable liner pending final disposition.
- After receiving laboratory analytical results from confirmation soil samples, backfill the excavated area with locally sourced, non-impacted "like" material.

The *Workplan* was subsequently approved.

SUMMARY OF SOIL REMEDIATION ACTIVITIES

Excavation activities were completed by a third-party contractor. As per the approved *Workplan*, the area characterized by SP5 was excavated to six (6) inches bgs. However, the areas characterized by SP1, SP2, SP3, SP4, SP6, SP7, and SP8 were field screened at the floor depth proposed by the workplan and field screen results indicated the floor required additional excavation. The floor of the excavation in the areas characterized by augerholes SP1, SP2, SP3, SP4, SP6, SP7 and SP8 was advanced until chloride field test results suggested concentrations of chloride were below the NMOCD regulatory guidelines. The resultant excavation floor was approximately eighteen (18) inches bgs in the areas characterized by SP1 and SP6, approximately thirty (30) inches bgs in the area characterized by SP8, approximately thirty-six (36) inches bgs in the areas characterized by SP2 and SP3, approximately forty-eight (48) inches bgs in the area characterized by SP7 and approximately twenty-four (24) to thirty-six (36) inches bgs in the area characterized by SP4. Excavated soil was stockpiled on-site pending final disposition.

On October 8, 2018, after the impacted soil had been excavated from within the margins of the Release Site, TRC collected twelve (12) excavation confirmation soil samples (SP-1 @ 1.5', SP-2 @ 3', SP-3 @ 3', SP-4 (1) @ 2', SP-4 (2) @ 3', SP-5 @ 6", SP-6 @ 1.5', SP-8 @ 2.5', Wall 1, Wall 2, Wall 3, and Wall 4) from the floor and sidewalls of the excavated area. The wall samples were collected from half-way down the excavation in the west, north, east and south cardinal directions, respectively, and the floor samples were labeled corresponding to the respective initial sampling areas. Collected soil samples were submitted to the laboratory for analysis of chloride concentrations. Laboratory analytical results indicated chloride concentrations were below the NMOCD regulatory guidelines in all of the submitted soil samples.

On October 11, 2018, following further excavation in the area characterized by SP7, TRC collected two (2) excavation soil samples (SP-7 FL Comp @ 4' and Wall 3) from the floor and sidewall of the excavated area. Wall 3 was resampled as the excavation depth was further advanced along the eastern margin of the excavation. Collected soil samples were submitted to the laboratory for analysis of chloride. Laboratory analytical results indicated chloride concentrations were below the NMOCD regulatory guidelines in each of the submitted soil samples. Please reference Figure 3 – Site & Confirmation Sample Location Map.

Prior to backfilling, the final dimensions of the excavated area were approximately two hundred (200) ft. in length, sixty (60) ft. to one hundred fifteen (115) ft. in width, and six (6) to forty-eight (48) inches in depth.

The site was returned to grade utilizing locally sourced clean backfill material. All excavated materials were disposed of at an NMOCD approved disposal facility.

SITE CLOSURE REQUEST

Remediation activities were conducted in accordance with an NMOCD-approved *Workplan*. Laboratory analytical results from excavation confirmation soil samples indicated chloride concentrations were below the NMOCD regulatory guidelines in all of the submitted soil samples. The impacted soil was transported to an NMOCD approved disposal facility, and the site was returned to grade with locally sourced clean backfill material.

Based on laboratory analytical results and field activities conducted to date, TRC recommends COG provide copies of this Remediation Summary and Risk-Based Site Closure Request to the NMOCD and NMSLO and request closure status to the SRO State Com #2H.

LIMITATIONS

TRC has prepared this Remediation Summary and Site Closure Request to the best of its ability. No other warranty, expressed or implied, is made or intended.

TRC has examined and relied upon documents referenced in the report and has relied on oral statements made by certain individuals. TRC has not conducted an independent examination of the facts contained in referenced materials and statements. We have presumed the genuineness of the documents and that the information provided in documents or statements is true and accurate. TRC has prepared this report, in a professional manner, using the degree of skill and care exercised by similar environmental consultants. TRC also notes that the facts and conditions referenced in this report may change over time and the conclusions and recommendations set forth herein are applicable only to the facts and conditions as described at the time of this report.

This report has been prepared for the benefit of COG Operating, LLC. The information contained in this report, including all exhibits and attachments, may not be used by any other party without the express consent of TRC and/or COG Operating, LLC.

Joel Lowry:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number(s) 602047. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 602047 will be filed for 45 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Kelsey Brooks
Project Manager

Flagging Criteria

X In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.

B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.

D The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.

E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.

F RPD exceeded lab control limits.

J The target analyte was positively identified below the quantitation limit and above the detection limit.

U Analyte was not detected.

L The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.

H The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.

K Sample analyzed outside of recommended hold time.

JN A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

** Surrogate recovered outside laboratory control limit.

BRL Below Reporting Limit.

Project Address: Eddy Co. NM

Joel Lowry:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number(s) 602197. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 602197 will be filed for 45 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Kelsey Brooks
Project Manager

Flagging Criteria

X In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.

B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.

D The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.

E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.

F RPD exceeded lab control limits.

J The target analyte was positively identified below the quantitation limit and above the detection limit.

U Analyte was not detected.

L The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.

H The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.

K Sample analyzed outside of recommended hold time.

JN A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

** Surrogate recovered outside laboratory control limit.

BRL Below Reporting Limit.

NATURE OF RELEASE

Type of Release: Produced Water	Volume of Release: 190 bbl.	Volume Recovered: 180 bbl.
Source of Release: Lightning Strike	Date and Hour of Occurrence: July 15, 2018 6:30pm	Date and Hour of Discovery: July 15, 2018 6:30pm
Was Immediate Notice Given? ☒ Yes ☐ No ☐ Not Required	If YES, To Whom? Mike Bratcher – NMOCD Ryan Mann – SLO	
By Whom? DeAnn Grant	Date and Hour July 16, 2018 9:03am	
Was a Watercourse Reached? ☐ Yes ☒ No	If YES, Volume Impacting the Watercourse.	

If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*

The release was caused by a lightning strike to the overflow water tank. The damaged tanks will be replaced.

Describe Area Affected and Cleanup Action Taken.*

The release occurred within the lined facility. A vacuum truck was dispatched to remove all freestanding fluids. Concho will have the spill area evaluated for any possible impact from the release and we will present a remediation work plan to the NMOCD for approval prior to any significant remediation activities.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Re: Soil Investigation Summary and Proposed Remediation Workplan
SRO State COM #002H 11/30/2017 (2RP-4510)
GPS: N 32.080101° W 104.1018906°
Unit Letter "P", Section 32, Township 25 South, Range 28 East, NMPM
Eddy County, New Mexico

Dear Mr. Bratcher and Mr. Mann,

2M Environmental Services, LLC. (2M), on behalf of COG Operating, LLC. (Concho), has prepared this Soil Investigation Summary and Proposed Remediation Workplan (Workplan) for the SRO State COM #002H 11/30/2017 Release Site (Release Site). The purpose of this Workplan is to propose remediation activities designed to advance the SRO State COM #002H 11/30/2017 Release Site toward a New Mexico Oil and Conservation District (NMOCD) approved Site Closure Status. The legal description of the Release Site is Unit Letter "P", Section 32, Township 25 South, Range 28 East, in Eddy County, New Mexico. The subject property is administered by the New Mexico State Land Office (NMSLO). The GPS coordinates for the site are N 32.080101° W 104.1018906°. A Site Location Map and Site Details and Soil Sample Location Map are provided as Figure 1 and Figure 2, respectively.

On November 30, 2017, a produced water release occurred at the SRO State COM #002H 11/30/2017. The release was the result of the failure of a two to one swedge, which resulted in the release of produced water in the lined containment and on the adjacent caliche production pad. On November 30, 2017, Concho reported the release to the NMOCD District 2 Office, located in Artesia, New Mexico, and NMSLO. The release was assigned an incident number 2RP-4510. A Release Notification and Corrective Action Form (Form C-141) was subsequently submitted to the NMOCD on December 1, 2017. The release was reported as approximately thirty (30) barrels of produced water released with approximately twenty-eight (28) barrels of produced water recovered, resulting in a net loss of approximately two (2) barrels of produced water. A copy of the NMOCD Release Notification and Corrective Action Form C-141 is attached to this Workplan.

A groundwater database maintained by The New Mexico Office of the State Engineer (NMOSE) did not identify the average depth to groundwater information in Section 32, Township 25 South, Range 28 East. A reference map utilized by the New Mexico Oil Conservation Division (NMOCD) Artesia District Office indicates groundwater should be encountered at approximately twenty-five (25) feet below ground surface (bgs). Based on the NMOCD site classification system, twenty (20) points will be assigned to the subject area ranking as a result of this criterion. No water wells were observed within one-thousand (1,000) feet of the Release Site. Based on the NMOCD site classification system, zero (0) points will be assigned to the subject area ranking as a result of this criterion. No surface water was observed within one thousand (1,000) feet of the release. Based on the NMOCD site classification system, twenty (20) points will be assigned to the subject area ranking as a result of this criterion.

Based on the NMOCD Site Classification criteria, the Release Site remediation levels are 10 mg/Kg for benzene, 50 mg/Kg for benzene, toluene, ethylbenzene and xylenes (BTEX) and 100 mg/Kg for total petroleum hydrocarbons (TPH). Chloride remediation levels for the Release Site will be 600 mg/Kg, per NMOCD request.

On December 29, 2017, Concho collected six (6) delineation soil samples (AH-1 @ 0', AH-1 @ 1', AH-1 @ 2', AH-2 @ 0', AH-2 @ 1', and AH-2 @ 2') utilizing a hand auger on the caliche pad. The soil samples were submitted to Xenco Laboratories in Midland, Texas for determination of concentrations of BTEX using Method SW 846-8021B, TPH using Method SW 846-8015M, and chloride using Method E-300.1. Laboratory analytical results indicated additional delineation was needed in the area represented by sample point AH-2. Sample results are provided as an attachment to this report (Table 1 - Concentrations of Benzene, BTEX, TPH and Chloride in Soil).

On March 13, 2018, 2M, on behalf of Concho, utilized a backhoe to collect five (5) delineation soil samples (T-1 @ 6", T-1 @ 1', T-1 @ 2', T-1 @ 3', and T-1 @ 4') from the area represented by sample point AH-2. The soil samples were submitted to Xenco Laboratories in Midland, Texas for determination of concentrations of BTEX using Method SW 846-8021B, TPH using Method SW 846-8015M, and chloride using Method E-300.1. Sample results are provided as an attachment to this report (Table 1 - Concentrations of Benzene, BTEX, TPH and Chloride in Soil).

Based on the analytical results of the soil samples collected on December 29, 2017 and March 13, 2018, respectively, Concho proposes the following field activities designed to remediate the SRO State COM #002H 11/30/2017:

- Utilizing a backhoe, excavate the area represented by sample point AH-1 to approximately two (2) feet bgs and the area represented by sample points AH-2 and T-1 to approximately two and a half (2.5) feet bgs.
- Impacted gravel inside the lined containment will be removed down to the lined surface.
- In addition, confirmation sidewall samples will be collected from the excavation to confirm clean margins.
- Excavated soil and impacted gravel will be stockpiled on a plastic liner adjacent to the excavation pending disposal.
- The excavation will be backfilled with locally purchased non-impacted "like" soil or caliche and the lined containment will be backfilled with non-impacted gravel. In addition, the excavated soil and gravel will be transported under manifest to a NMOCD approved disposal facility.
- Prepare and submit a "Remediation Summary and Site Closure Request" to the NMOCD and NMSLO.

Concho is prepared to begin the activities outlined in this Proposed Remediation Workplan on NMOCD and NMSLO approval.

If you have any questions, or if additional information is required, please feel free to call me at 432-614-6793 (office) or 432-230-3763 (cell).

Thank you,

Matthew Green

Sheldon Hitchcock:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number(s) 573116. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 573116 will be filed for 45 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Kelsey Brooks
Project Manager

Flagging Criteria

X In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.

B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.

D The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.

E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.

F RPD exceeded lab control limits.

J The target analyte was positively identified below the quantitation limit and above the detection limit.

U Analyte was not detected.

L The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.

H The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.

K Sample analyzed outside of recommended hold time.

JN A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

** Surrogate recovered outside laboratory control limit.

BRL Below Reporting Limit.

RL Reporting Limit

MDL Method Detection Limit **SDL** Sample Detection Limit **LOD** Limit of Detection

PQL Practical Quantitation Limit **MQL** Method Quantitation Limit **LOQ** Limit of Quantitation

DL Method Detection Limit

NC Non-Calculable

\+ NELAC certification not offered for this compound.

* (Next to analyte name or method description) = Outside XENCO's scope of NELAC accreditation

Project Address: Eddy County, NM

Matt Green:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number(s) 579821. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 579821 will be filed for 45 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Holly Taylor

CASE NARRATIVE

Client Name: 2M Enviromental Services LLC

Project Name: COG SRO State COM #002

Project ID:
Work Order Number(s): *579821*

Report Date: *27-MAR-18*
Date Received: *03/20/2018*

Sample receipt non conformances and comments:

None

Sample receipt non conformances and comments per sample:

None

Analytical non conformances and comments:

Batch: LBA-3044699 BTEX by EPA 8021B

Soil samples were not received in Terracore kits and therefore were prepared by method 5030.

Flagging Criteria

X In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.

B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.

D The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.

E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.

F RPD exceeded lab control limits.

J The target analyte was positively identified below the quantitation limit and above the detection limit.

U Analyte was not detected.

L The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.

H The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.

K Sample analyzed outside of recommended hold time.

JN A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

** Surrogate recovered outside laboratory control limit.

BRL Below Reporting Limit.

RL Reporting Limit

MDL Method Detection Limit **SDL** Sample Detection Limit **LOD** Limit of Detection

PQL Practical Quantitation Limit **MQL** Method Quantitation Limit **LOQ** Limit of Quantitation

Checklist completed by: Connie Hernandez Date: 03/21/2018

Checklist reviewed by: Holly Taylor Date: 03/21/2018

Operator/Responsible Party,

The OCD has received the form C-141 you provided on **12/01/17** regarding an unauthorized release. The information contained on that form has been entered into our incident database and remediation case number 2RP-4510 has been assigned. **Please refer to this case number in all future correspondence.**

It is the Division's obligation under both the Oil & Gas Act and Water Quality Act to provide for the protection of public health and the environment. Our regulations (19.15.29.11 NMAC) state the following,

> *The responsible person shall complete division-approved corrective action for releases that endanger public health or the environment. The responsible person shall address releases in accordance with a remediation plan submitted to and approved by the division or with an abatement plan submitted in accordance with 19.15.30 NMAC.* [emphasis added]

Release characterization is the first phase of corrective action unless the release is ongoing or is of limited volume and all impacts can be immediately addressed. Proper and cost-effective remediation typically cannot occur without adequate characterization of the impacts of any release. Furthermore, the Division has the ability to impose reasonable conditions upon the efforts it oversees. **As such, the Division is requiring a workplan for the characterization of impacts associated with this release be submitted to the OCD District II office in Artesia on or before 1/01/18. If and when the release characterization workplan is approved, there will be an associated deadline for submittal of the resultant investigation report. Modest extensions of time to these deadlines may be granted, but only with acceptable justification.**

The goals of a characterization effort are: 1) determination of the lateral and vertical extents along with the magnitude of soil contamination. 2) determine if groundwater or surface waters have been impacted. 3) If groundwater or surface waters have been impacted, what are the extents and magnitude of that impact. 4) The characterization of any other adverse impacts that may have occurred (examples: impacts on vegetation, impacts on wildlife, air quality, loss of use of property, etc.). To meet these goals as quickly as possible, the following items must, at a minimum, be addressed in the release characterization workplan and subsequent reporting:

- Horizontal delineation of soil impacts in each of the four cardinal compass directions. Adsorbed soil contamination must be characterized for the following constituents using the associated laboratory methods: benzene, toluene, ethylbenzene, and total xylenes by either Method 8260 or 8021, total petroleum hydrocarbons by Method 8015 extended range (GRO+DRO+MRO; C_6 thru C_{36}), and for chloride by Method 300. This is not an exclusive list of potential contaminants. Analyzed parameters should be modified based on the nature of the released substance(s). Soil sampling must be both within the impacted area and beyond.

- Vertical delineation of soil impacts. Adsorbed soil contamination must be characterized for the following constituents using the associated laboratory methods: benzene, toluene, ethylbenzene, and total xylenes by either Method 8260 or 8021, total petroleum hydrocarbons by Method 8015 extended range (GRO+DRO+MRO; C_6 thru C_{36}), and for chloride by Method 300. As above, this is not an exclusive list of potential contaminants and can be modified. Vertical characterization samples should be taken at depth intervals no greater than five feet apart. Lithologic description of encountered soils must also be provided. At least ten vertical feet of soils with contaminant concentrations at or below these values must be demonstrated as existing above the water table.

- Nominal detection limits for field and laboratory analyses must be provided.

- Composite sampling is not generally allowed.

- Field screening and assessment techniques are acceptable (headspace, titration, EC [include algorithm for validation purposes], EM, etc.), but the sampling and assay procedures must be clearly defined. Copies of field notes are highly desirable. A statistically significant set of split samples must be submitted for confirmatory laboratory analysis, including the laterally farthest and vertically deepest sets of soil samples. Make sure there are at least two soil samples submitted

for laboratory analysis from each borehole or test pit (highest observed contamination and deepest depth investigated). Copies of the actual laboratory results must be provided including chain of custody documentation.

•Probable depth to shallowest protectable groundwater and lateral distance to nearest surface water. If there is an estimate of groundwater depth, the information used to arrive at that estimate must be provided. If there is a reasonable assumption that the depth to protectable water is 50 feet or less, the responsible party should anticipate the need for at least one groundwater monitoring well to be installed in the area of likely maximum contamination.

• If groundwater contamination is encountered, an additional investigation workplan may be required to determine the extents of that contamination. Groundwater and/or surface water samples, if any, must be analyzed by a competent laboratory for volatile organic hydrocarbons (typically Method 8260 full list), total dissolved solids, pH, major anions and cations including chloride and sulfate, dissolved iron, and dissolved manganese. The investigation workplan must provide the groundwater sampling method(s) and sample handling protocols. To the fullest extent possible, aqueous analyses must be undertaken using nominal method detection limits. As with the soil analyses, copies of the actual laboratory results must be provided including chain of custody documentation.

• Accurately scaled and well-drafted site maps must be provided providing the location of borings, test pits, monitoring wells, potentially impacted areas, and significant surface features including roads and site infrastructure that might limit either the release characterization or remedial efforts. Field sketches may be included in subsequent reporting, but should not be considered stand-alone documentation of the site's layout. Digital photographic documentation of the location and fieldwork is recommended, especially if unusual circumstances are encountered.

Nothing herein should be interpreted to preclude emergency response actions or to imply immediate remediation by removal cannot proceed as warranted. Nonetheless, characterization of impacts and confirmation of the effectiveness of remedial efforts must still be provided to the OCD before any release incident will be closed.

Subject: (Notification) SRO State Com #002H 11/30/17 (30-015-37141)

Ms. Weaver / Ms. Groves,

COG Operating LLC is reporting a release at the SRO State Com #002H (30-015-37141)
Unit P Section 32 Township 25S Range 28E GPS 32.080101, -104.1018906.
OGRID# [229137]
The release occurred on November 30, 2017 at 8:00 am.
Estimated Released: Approximately: >25 bbl. of Produced Water.
Estimated Recovered: Approximately: Currently ongoing.

The release was due to a swedge failure on the water transfer pump. The release is within a lined facility and on the adjacent pad. The site is being evaluated and an Initial C-141 will be submitted. If you have any additional questions please don't hesitate to contact me.

Thank You,

Becky Haskell

DELINEATION WORKPLAN

COG – SRO STATE COM #002H
(Leak Date: 7/15/18)

RP # 2RP-4862

This delineation workplan and remediation proposal addresses the release associated with RP # 2RP-4862.

The following information includes:

1. Scaled digital site map with spill area demarcated and leak point identified along with sample point locations and areas of remediation at appropriate depths.
2. GPS information for sample points and sample methodology
3. Depth to groundwater information (i.e., pdf of OSE search results and/or copy of Chevron groundwater trend map).
4. Laboratory analysis results summary table and original laboratory analysis reports
5. A copy of the initial C-141
6. Potentially other pertinent information as necessary for site specific purposes.

Based on the information included in this package and the NMOCD guidelines, the following remediation is proposed:

COG will excavate the spill area as depicted on the following site diagram. The battery was destroyed in the fire and was dismantled so the delineation activities could be conducted. The leak area near SP1, SP5, and SP6 (BLUE shade on diagram) will be excavated to a depth of 6 inches. The leak area near SP2 and SP3 (PURPLE shade on diagram) will be excavated to a depth of 2 feet. The leak area near SP4 (ORANGE shade on diagram) will be excavated to a depth of 1 foot. The leak area near SP7 (PINK shade on diagram) will be excavated to a depth of 2.5 feet.

The entire site will then be backfilled with clean soil and revegetated (if warranted) to the standards of the appropriate regulatory agency or private surface owner.

All excavated materials will be disposed of at an NMOCD-approved disposal facility.

Revegetation Plan

Disturbed areas associated with the remediation efforts will be reseeded. If after one growing season, the vegetation has not taken hold, seeding may need to be repeated until revegetation is successful, as determined by the State Land Office. The seed will be spread by either using a hand-held broadcaster or tractor-mounted broadcaster and the area will be raked or dragged to cover the seed. If the seed will be broadcast, the pounds per acre will be double over the amount used by drill planting.

The seed mixture will be the appropriate mixture for the specific site and planted in the required amounts of pounds pure live seed (PLS) per acre. Commercially sold seed will be either certified or registered and will not contain primary or secondary noxious weeds.

Grasses:			
Sideoats grama	Vaughn, El Reno	4.0	F
Blue grama	Lovington, Hachita	3.0	D
Little bluestem	Pastura, Cimmaron	1.5	F
Green sprangletop	VNS, Southern	1.0	D
Plains bristlegrass	VNS, Southern	1.0	D
Forbs:			
Firewheel (*Gaillardia*)	VNS, Southern	1.0	D
Shrubs:			
Fourwing saltbush	Marana, Santa Rita	1.0	D
Common winterfat	VNS, Southern	0.5	F
	Total PLS/acre	13.0	

Noxious Weed Management Plan

The site will be visited to assess the establishment of vegetative growth. Personnel performing the site visit will also look for the presence of noxious weeds at the site as indicated on the New Mexico Noxious Weeds List specified on the United States Department of Agriculture website. If a noxious weed is observed at the site, the NMSLO will be contacted to determine the most effective manner to eradicate it.

RE: SRO STATE COM #2H

Enclosed are the results of analyses for samples received by the laboratory on 08/17/18 15:55.

Cardinal Laboratories is accredited through Texas NELAP under certificate number T104704398-18-11. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accreditated through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Celey D. Keene

Celey D. Keene

Notes and Definitions

QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
ND	Analyte NOT DETECTED at or above the reporting limit
RPD	Relative Percent Difference
**	Samples not received at proper temperature of 6°C or below.
***	Insufficient time to reach temperature.
-	Chloride by SM4500Cl-B does not require samples be received at or below 6°C
	Samples reported on an as received basis (wet) unless otherwise noted on report

NATURE OF RELEASE

Type of Release: Produced Water	Volume of Release: 190 bbl.	Volume Recovered: 180 bbl.
Source of Release: Lightning Strike	Date and Hour of Occurrence: July 15, 2018 6:30pm	Date and Hour of Discovery: July 15, 2018 6:30pm
Was Immediate Notice Given? ☒ Yes ☐ No ☐ Not Required	If YES, To Whom? Mike Bratcher – NMOCD; Ryan Mann – SLO	
By Whom? DeAnn Grant	Date and Hour July 16, 2018 9:03am	
Was a Watercourse Reached? ☐ Yes ☒ No	If YES, Volume Impacting the Watercourse.	

If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*

The release was caused by a lightning strike to the overflow water tank. The damaged tanks will be replaced.

Describe Area Affected and Cleanup Action Taken.*

The release occurred within the lined facility. A vacuum truck was dispatched to remove all freestanding fluids. Concho will have the spill area evaluated for any possible impact from the release and we will present a remediation work plan to the NMOCD for approval prior to any significant remediation activities.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Title: HSE Administrative Assistant	Approval Date: 7/17/18 Expiration Date: N/A
E-mail Address: agrant@concho.com	Conditions of Approval: See attached Attached ☒ 2RP-4863
Date: July 16, 2018 Phone: (432) 253-4513	

* Attach Additional Sheets If Necessary

Operator/Responsible Party,

The OCD has received the form C-141 you provided on July 17, 2018 regarding an unauthorized release. The information contained on that form has been entered into our incident database and remediation case number 2RP-4862 has been assigned. **Please refer to this case number in all future correspondence.**

It is the Division's obligation under both the Oil & Gas Act and Water Quality Act to provide for the protection of public health and the environment. Our regulations (19.15.29.11 NMAC) state the following,

> *The responsible person shall complete division-approved corrective action for releases that endanger public health or the environment. The responsible person shall address releases in accordance with a remediation plan submitted to and approved by the division or with an abatement plan submitted in accordance with 19.15.30 NMAC.* [emphasis added]

Release characterization is the first phase of corrective action unless the release is ongoing or is of limited volume and all impacts can be immediately addressed. Proper and cost-effective remediation typically cannot occur without adequate characterization of the impacts of any release. Furthermore, the Division has the ability to impose reasonable conditions upon the efforts it oversees. **As such, the Division is requiring a workplan for the characterization of impacts associated with this release be submitted to the OCD District 2 office in Artesia on or before 8/15/18. If and when the release characterization workplan is approved, there will be an associated deadline for submittal of the resultant investigation report. Modest extensions of time to these deadlines may be granted, but only with acceptable justification.**

The goals of a characterization effort are: 1) determination of the lateral and vertical extents along with the magnitude of soil contamination. 2) determine if groundwater or surface waters have been impacted. 3) If groundwater or surface waters have been impacted, what are the extents and magnitude of that impact. 4) The characterization of any other adverse impacts that may have occurred (examples: impacts on vegetation, impacts on wildlife, air quality, loss of use of property, etc.). To meet these goals as quickly as possible, the following items must, at a minimum, be addressed in the release characterization workplan and subsequent reporting:

- Horizontal delineation of soil impacts in each of the four cardinal compass directions. Adsorbed soil contamination must be characterized for the following constituents using the associated laboratory methods: benzene, toluene, ethylbenzene, and total xylenes by either Method 8260 or 8021, total petroleum hydrocarbons by Method 8015 extended range (GRO+DRO+MRO; C_6 thru C_{36}), and for chloride by Method 300. This is not an exclusive list of potential contaminants. Analyzed parameters should be modified based on the nature of the released substance(s). Soil sampling must be both within the impacted area and beyond.

- Vertical delineation of soil impacts. Adsorbed soil contamination must be characterized for the following constituents using the associated laboratory methods: benzene, toluene, ethylbenzene, and total xylenes by either Method 8260 or 8021, total petroleum hydrocarbons by Method 8015 extended range (GRO+DRO+MRO; C_6 thru C_{36}), and for chloride by Method 300. As above, this is not an exclusive list of potential contaminants and can be modified. Vertical characterization samples should be taken at depth intervals no greater than five feet apart. Lithologic description of encountered soils must also be provided. At least ten vertical feet of soils with contaminant concentrations at or below these values must be demonstrated as existing above the water table.

- Nominal detection limits for field and laboratory analyses must be provided.

- Composite sampling is not generally allowed.

- Field screening and assessment techniques are acceptable (headspace, titration, EC [include algorithm for validation purposes], EM, etc.), but the sampling and assay procedures must be clearly defined. Copies of field notes are highly desirable. A statistically significant set of split samples must be submitted for confirmatory laboratory analysis, including the laterally farthest and vertically deepest sets of soil samples. Make sure there are at least two soil samples submitted

for laboratory analysis from each borehole or test pit (highest observed contamination and deepest depth investigated). Copies of the actual laboratory results must be provided including chain of custody documentation.

•Probable depth to shallowest protectable groundwater and lateral distance to nearest surface water. If there is an estimate of groundwater depth, the information used to arrive at that estimate must be provided. If there is a reasonable assumption that the depth to protectable water is 50 feet or less, the responsible party should anticipate the need for at least one groundwater monitoring well to be installed in the area of likely maximum contamination.

• If groundwater contamination is encountered, an additional investigation workplan may be required to determine the extents of that contamination. Groundwater and/or surface water samples, if any, must be analyzed by a competent laboratory for volatile organic hydrocarbons (typically Method 8260 full list), total dissolved solids, pH, major anions and cations including chloride and sulfate, dissolved iron, and dissolved manganese. The investigation workplan must provide the groundwater sampling method(s) and sample handling protocols. To the fullest extent possible, aqueous analyses must be undertaken using nominal method detection limits. As with the soil analyses, copies of the actual laboratory results must be provided including chain of custody documentation.

• Accurately scaled and well-drafted site maps must be provided providing the location of borings, test pits, monitoring wells, potentially impacted areas, and significant surface features including roads and site infrastructure that might limit either the release characterization or remedial efforts. Field sketches may be included in subsequent reporting, but should not be considered stand-alone documentation of the site's layout. Digital photographic documentation of the location and fieldwork is recommended, especially if unusual circumstances are encountered.

Nothing herein should be interpreted to preclude emergency response actions or to imply immediate remediation by removal cannot proceed as warranted. Nonetheless, characterization of impacts and confirmation of the effectiveness of remedial efforts must still be provided to the OCD before any release incident will be closed.

Subject: (Notification) SRO State Com #002H (30-015-37141) 07-15-2018

COG Operating, LLC (OGRID# 229137) is reporting a produced water release at the SRO State Com #002H (30-015-37141).

Release Location:
ULSTR: P-32-25S-28E
Lat/Long: 32.080101, -104.1018906

Date of Release: July 15, 2018

Release Volume: >25bbls

Recovery Volume: On going

COG will have the release evaluated and will submit an initial C-141. If you have any questions or concerns please do not hesitate to contact me.

Thank you,

DeAnn Grant

Closure

The responsible party must attach information demonstrating they have complied with all applicable closure requirements and any conditions or directives of the OCD. This demonstration should be in the form of a comprehensive report (electronic submittals in .pdf format are preferred) including a scaled site map, sampling diagrams, relevant field notes, photographs of any excavation prior to backfilling, laboratory data including chain of custody documents of final sampling, and a narrative of the remedial activities. Refer to 19.15.29.12 NMAC.

Closure Report Attachment Checklist: ***Each of the following items must be included in the closure report.***

☑ A scaled site and sampling diagram as described in 19.15.29.11 NMAC

☑ Photographs of the remediated site prior to backfill or photos of the liner integrity if applicable (Note: appropriate OCD District office must be notified 2 days prior to liner inspection)

☑ Laboratory analyses of final sampling (Note: appropriate ODC District office must be notified 2 days prior to final sampling)

☑ Description of remediation activities

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. The responsible party acknowledges they must substantially restore, reclaim, and re-vegetate the impacted surface area to the conditions that existed prior to the release or their final land use in accordance with 19.15.29.13 NMAC including notification to the OCD when reclamation and re-vegetation are complete.
