Incident #: 2RP-3715
Site Location: Unit P Sec 35 T17S R30E
(Lat 32.786097°, Long -103.937150°)
Eddy County, New Mexico

Mr. Bratcher:

On behalf of EOG Resources Inc. (EOG), Carmona Resources, LLC has prepared this letter to document the Cedar Lake Federal Com #2 site activities. The site is located at 32.786097°, -103.937150° within Unit P Sec 35 T17S R30E, in Eddy County, New Mexico (Figures 1 and 2).

1.0 Site Information and Background

Based on the initial C-141 obtained from the New Mexico Oil Conservation Division (NMOCD), the release was discovered on May 30, 2016. The cause of the release is a rotten out tank bottom. It released approximately one-eighty-eight (188) barrels of crude oil. Approximately two (2) barrels of crude oil were recovered. The impacted area occurred on the pad shown in Figure 3. The initial C-141 form is attached in Appendix C.

2.0 Site Characterization and Groundwater

The site is located within a low karst area. Based on a review of the New Mexico Office of State Engineers and USGS databases, no known water source is within a 0.50-mile radius of the location. The nearest identified well is approximately 3.63 miles Southwest of the site in S22, T18S, R30E and was drilled in 1990. The well has a reported depth to groundwater of 227.03' feet below the ground surface (ft bgs). A copy of the associated Summary Report is attached in Appendix D.

On June 23, 2021, a third-party contractor was onsite to drill a groundwater determination bore 55' below the ground surface within a 0.50-mile radius of the location. The groundwater determination bore is located approximately 0.04 miles Northwest of the site at 32.786475, -103.937728 in S35, T17S, R30E. The bore was left open for 72 hours and tagged with a water level meter. The bore has shown no signs of water at a depth of 55' below the ground surface (bgs). A copy of the groundwater determination bore log is attached in Appendix D.

3.0 NMAC Regulatory Criteria

Per the NMOCD regulatory criteria established in 19.15.29.12, the following criteria were utilized in assessing the site.

310 West Wall Street, Suite 500
Midland, Texas 79701
432.813.1992

- Benzene: 10 milligrams per kilogram (mg/kg).
- Benzene, toluene, ethylbenzene, and total xylenes (BTEX): 50 mg/kg.
- TPH: 2,500 mg/kg (GRO + DRO + MRO).
- TPH: 1,000 mg/kg (GRO+DRO).
- Chloride: 10,000 mg/kg.

4.0 Site Assessment Activities

Initial Assessment

On June 18, 2017, a third-party contractor was on location to conduct an initial assessment of the release. A total of eight (8) direct push samples were advanced to depths ranging from surface to 15' bgs inside the release areas to evaluate the vertical extent. For chemical analysis, the soil samples were collected and placed directly into laboratory-provided sample containers, stored on ice, and transported under the proper chain-of-custody protocol to PBE Laboratories in Midland, Texas. The samples were analyzed for total petroleum hydrocarbons (TPH) by EPA method 8015, modified benzene, toluene, ethylbenzene, and xylenes (BTEX) by EPA Method 8021B, and chloride by EPA method 300.0. The laboratory reports, including analytical methods, results, and chain-of-custody documents, are attached in Appendix E. The sample locations are shown in Figure 3.

See Table 1 for the analytical results.

Initial Excavation

Between July 21 and August 23, 2016, a third party excavated approximately 324 cubic yards of soil from the spill area. The soil was excavated from around the tanks and outside the firewall to a maximum depth of approximately 10 feet bgs (SS-9-10) near the southwest corner of the tank battery. For chemical analysis, the soil samples were collected and placed directly into laboratory-provided sample containers, stored on ice, and transported under the proper chain-of-custody protocol to PBE Laboratories in Midland, Texas. The samples were analyzed for total petroleum hydrocarbons (TPH) by EPA method 8015, modified benzene, toluene, ethylbenzene, and xylenes (BTEX) by EPA Method 8021B, and chloride by EPA method 300.0. The laboratory reports, including analytical methods, results, and chain-of-custody documents, are attached in Appendix E. The sample locations are shown in Figure 4.

On August 24, 2016, during a conference call between EOG, the third-party contractor, and Ms. Heather Patterson with NMOCD District 2, OCD agreed to defer remediation of the residual hydrocarbons until the facility's abandonment. The request for deferral is based on the ability to safely remediate the hydrocarbons without risking damage to the integrity of the tank battery. The Site has been sufficiently delineated to show a reduction of the BTEX and TPH levels in the soil. See Appendix C for email correspondence and approval of deferral.

Additional Site Assessment Activities

On April 7, 2021, a third-party contractor performed site assessment activities to evaluate soil impacts stemming from the release. A total of seven (7) trenches (S-1 through S-7) were advanced to depths ranging from the surface to 12' bgs inside the release areas to evaluate the vertical extent. For chemical analysis, the soil samples were collected and placed directly into laboratory-provided sample containers, stored on ice, and transported under the proper chain-of-custody protocol to Eurofins Laboratories in Midland, Texas. The samples were analyzed for total petroleum hydrocarbons (TPH) by EPA method 8015, modified benzene, toluene, ethylbenzene, and xylenes (BTEX) by EPA Method 8021B, and chloride by EPA method

300.0. The laboratory reports, including analytical methods, results, and chain-of-custody documents, are attached in Appendix E. The sample locations are shown in Figure 5.

See Table 3 for the analytical results.

5.0 Remediation Activities

Before remediation activities, EOG Resources removed all equipment and lines to ensure the site could be safely accessed and remediated to the full extent. Carmona Resources personnel were onsite to supervise the remediation activities, collect confirmation samples, and document backfill activities. Before collecting composite confirmation samples, the NMOCD division office was notified via email on May 15, 2023, per Subsection D of 19.15.29.12 NMAC. See Appendix C. Before any remediation activities. A total of seven (7) floor confirmation samples were collected (CS-1 through CS-7), and twenty-four (24) sidewall samples (SW-1 through SW-24) were collected every 200 square feet to ensure the proper removal of the contaminated soils. All collected samples were analyzed for TPH analysis by EPA method 8015 modified, BTEX by EPA Method 8021B, and chloride by EPA method 4500. Copies of laboratory analysis and chain-of-custody documentation are included in Appendix E. The excavation depths and confirmation sample locations are shown in Figure 6.

The confirmation samples (CS-1, CS-2, CS-3, and CS-5) showed elevated TPH and BTEX levels greater than 1,000 mg/kg and 50 mg/kg. They were excavated to an additional 1.25-1.5' to remove contaminated soil and were re-collected.

All final confirmation samples were below the reclamation and regulatory requirements for TPH, BTEX, and chloride. Refer to Table 4.

Once remediation activities were completed, the excavated areas were backfilled with clean material. A total of 430 cubic yards of material were excavated and transported offsite for proper disposal.

6.0 Conclusions

Based on the assessment results and the analytical data, no further actions are required at the site. If you have any questions regarding this report or need additional information, please get in touch with us at 432-813-1992.

Attach a comprehensive report (electronic submittals in .pdf format are preferred) demonstrating the lateral and vertical extents of soil contamination associated with the release have been determined. Refer to 19.15.29.11 NMAC for specifics.

Characterization Report Checklist: *Each of the following items must be included in the report.*

- Scaled site map showing impacted area, surface features, subsurface features, delineation points, and monitoring wells.
- Field data
- Data table of soil contaminant concentration data
- Depth to water determination

Refer to 19.15.29.12 NMAC.

Closure Report Attachment Checklist: *Each of the following items must be included in the closure report.*

- A scaled site and sampling diagram as described in 19.15.29.11 NMAC
- Photographs of the remediated site prior to backfill or photos of the liner integrity if applicable (Note: appropriate OCD District office must be notified 2 days prior to liner inspection)
- Laboratory analyses of final sampling (Note: appropriate ODC District office must be notified 2 days prior to final sampling)
- Description of remediation activities

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. Notes and Definitions

- S-04 The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
- QR-04 The RPD for the BS/BSD was outside of historical limits.
- QM-07 The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
- GC-NC1 8260 confirmation analysis was performed; initial GC results were not supported by GC/MS analysis and are biased high with interfering compounds.
- BS-3 Blank spike recovery outside of lab established statistical limits, but still within method limits. Data is not adversely affected.
- ND Analyte NOT DETECTED at or above the reporting limit
- RPD Relative Percent Difference
- ** Samples not received at proper temperature of 6°C or below.
- *** Insufficient time to reach temperature.
- Chloride by SM4500Cl-B does not require samples be received at or below 6°C
- Samples reported on an as received basis (wet) unless otherwise noted on report
