Field: PERMIAN\_RESOURCES  
Station Name: Falcon Ridge CPF Production #2  
Station Number: 16840p  
Station Location: OP-L3821-BT001  
Sample Point: Meter run  
Formation: NEW\_MEXICO  
County: Lea, NM  
Well Name:  
Type of Sample: : Spot-Cylinder  
Heat Trace Used: N/A  
Sampling Method: : Fill and Purge  
Sampling Company: :SPL - OXY

Sampled By: Raul Salazar  
Sample Of: Gas Spot  
Sample Date: 11/13/2023 08:48  
Sample Conditions: 109 psig, @ 93.8 °F Ambient: 51 °F  
Effective Date: 11/13/2023 08:48  
Method: GPA-2261M  
Cylinder No: 4030-004290  
Instrument: 70104251 (Inficon GC-MicroFusion)

**UPSET FLARING EVENT SPECIFIC JUSTIFICATIONS FORM****Facility:** Falcon Ridge Tankless CPF**Flare Date:** 12/18/2023**Duration of Event:** 8 Hours 30 Minutes**MCF Flared:** 2980**Start Time:** 06:00 AM**End Time:** 02:30 PM**Cause:** Emergency Flare > High O2 Detected by Targa's O2 Sensor > Targa ESD Valve Shut**Method of Flared Gas Measurement:** Gas Flare Meter

---

**1. Reason why this event was beyond Operator's control:**

The emissions event was caused by the unforeseen, unexpected, sudden, and unavoidable interruption, restriction, or complete shut-in of a gas pipeline by a third-party downstream pipeline operator, which impacted Oxy's ability to send gas to a third-party downstream gas pipeline. This interruption, restriction, or complete shut-in of the gas pipeline by a third-party pipeline operator is downstream of Oxy's custody transfer point and out of Oxy's control to avoid or prevent from happening and did not stem from any of Oxy's upstream facility activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and preventative maintenance practices. In this case, this flaring event occurred due to an unexpected shut in and/or restriction of flow intake by Targa, which was caused by high O2 in the gas service line. Targa has a strict threshold for the O2 with due to a proximity to a gas plant. When Oxy's wells brought unexpected O2 into the sales lines, Targa's meter sensed it and its ESD valve closed. Once Targa's ESD shut, Oxy had to purge the O2 from the gas line system by flaring the gas multiple instances over the course of a few hours to ensure all O2 was cleared and removed from the system. This was intermittent throughout the morning due to O2 gas being injected into the wells and coming back through the system. This event could not have been foreseen, avoided or planned for as a full train was purged prior to use, and unfortunately, few pockets of O2 occurred once production began through the train.

**2. Steps Taken to limit duration and magnitude of venting or flaring:**

It is OXY's policy to route its stranded gas to a flare during an unforeseen and unavoidable emergency or malfunction, as the part of the overall process or steps to take to limit duration and magnitude of flaring. Oxy personnel are in the field 24/7 and can physically see when we are flaring which in turn are communicated to additional Oxy field personnel. Internal OXY procedures ensure that upon notice of flaring, malfunction gas compressor unit and/or multiple unit shutdown alarms, increased sensor line pressure alarms, etc., field production technician personnel are promptly notified, and are instructed to assess the issue as soon as possible to take prompt corrective action and minimize emissions. Oxy production technicians must assess whether the issue or circumstance is due to damage and repair is needed, or whether there are other reasons for its cause. In this case, this flaring event occurred due to an unexpected shut in and/or restriction of flow intake by Targa, which was caused by high O2 in the gas service line. Wells were choked back, and production techs worked to get the compression equipment purged of O2 and back online. Oxy production techs consistently worked with Targa personnel to get technicians dispatched to re-open their ESD valve and begin taking gas again as a test quality measure to ensure all O2 was cleared, on several occasions.

**3. Corrective Actions taken to eliminate the cause and reoccurrence of venting or flaring:**

Oxy is limited in its corrective actions to eliminate the cause and potential reoccurrence of O2 accidentally pushed into the sales gas service system pipeline. OXY makes every effort to control and minimize emissions as much as possible. The limited reactive actions that Oxy can do in this circumstance is to immediately purge the O2 from the system as well as continually communicate with Targa personnel throughout these types of situations.

QUESTIONS

| Date(s) and Time(s)                            |            |
|------------------------------------------------|------------|
| Date vent or flare was discovered or commenced | 12/18/2023 |
| Time vent or flare was discovered or commenced | 06:00 AM   |
| Time vent or flare was terminated              | 02:30 PM   |
| Cumulative hours during this event             | 9          |

| Measured or Estimated Volume of Vented or Flared Natural Gas              |                                                                                                                 |
|---------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|
| Natural Gas Vented (Mcf) Details                                          | Not answered.                                                                                                   |
| Natural Gas Flared (Mcf) Details                                          | Cause: Other   Other (Specify)   Natural Gas Flared   Released: 2,980 Mcf   Recovered: 0 Mcf   Lost: 2,980 Mcf. |
| Other Released Details                                                    | Not answered.                                                                                                   |
| Additional details for Measured or Estimated Volume(s). Please specify    | Gas Flare Meter                                                                                                 |
| Is this a gas only submission (i.e. only significant Mcf values reported) | Yes, according to supplied volumes this appears to be a "gas only" report.                                      |

| Venting or Flaring Resulting from Downstream Activity             |               |
|-------------------------------------------------------------------|---------------|
| Was this vent or flare a result of downstream activity            | No            |
| Was notification of downstream activity received by this operator | Not answered. |
| Downstream OGRID that should have notified this operator          | Not answered. |
| Date notified of downstream activity requiring this vent or flare | Not answered. |
| Time notified of downstream activity requiring this vent or flare | Not answered. |

| Steps and Actions to Prevent Waste                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| For this event, this operator could not have reasonably anticipated the current event and it was beyond this operator's control. | True                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Please explain reason for why this event was beyond this operator's control                                                      | The emissions event was caused by the unforeseen, unexpected, sudden, and unavoidable interruption, restriction, or complete shut-in of a gas pipeline by a third-party downstream pipeline operator, which impacted Oxy's ability to send gas to a third-party downstream gas pipeline. This interruption, restriction, or complete shut-in of the gas pipeline by a third-party pipeline operator is downstream of Oxy's custody transfer point and out of Oxy's control to avoid or prevent from happening and did not stem from any of Oxy's upstream facility activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and preventative maintenance practices. In this case, this flaring event occurred due to an unexpected shut in and/or restriction of flow intake by Targa, which was caused by high O2 in the gas service line. Targa has a strict threshold for the O2 with due to a proximity to a gas plant. When Oxy's wells brought unexpected O2 into the sales lines, Targa's meter sensed it and its ESD valve closed. Once Targa's ESD shut, Oxy had to purge the O2 from the gas line system by flaring the gas multiple instances over the course of a few hours to ensure all O2 was cleared and removed from the system. This was intermittent throughout the morning due to O2 gas being injected into the wells and coming back through the system. This event could not have been foreseen, avoided or planned for as a full train was purged prior to use, and unfortunately, few pockets of O2 occurred once production began through the train. |
|                                                                                                                                  | It is OXY's policy to route its stranded gas to a flare during an unforeseen and unavoidable emergency or malfunction, as the part of the overall process or steps to take to limit duration                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Steps taken to limit the duration and magnitude of vent or flare                  | and magnitude of flaring. Oxy personnel are in the field 24/7 and can physically see when we are flaring which in turn are communicated to additional Oxy field personnel. Internal OXY procedures ensure that upon notice of flaring, malfunction gas compressor unit and/or multiple unit shutdown alarms, increased sensor line pressure alarms, etc., field production technician personnel are promptly notified, and are instructed to assess the issue as soon as possible to take prompt corrective action and minimize emissions. Oxy production technicians must assess whether the issue or circumstance is due to damage and repair is needed, or whether there are other reasons for its cause. In this case, this flaring event occurred due to an unexpected shut in and/or restriction of flow intake by Targa, which was caused by high O2 in the gas service line. Wells were choked back, and production techs worked to get the compression equipment purged of O2 and back online. Oxy production techs consistently worked with Targa personnel to get technicians dispatched to re-open their ESD valve and begin taking gas again as a test quality measure to ensure all O2 was cleared, on several occasions. |
| Corrective actions taken to eliminate the cause and reoccurrence of vent or flare | Oxy is limited in its corrective actions to eliminate the cause and potential reoccurrence of O2 accidentally pushed into the sales gas service system pipeline. OXY makes every effort to control and minimize emissions as much as possible. The limited reactive actions that Oxy can do in this circumstance is to immediately purge the O2 from the system as well as continually communicate with Targa personnel throughout these types of situations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
