**UPSET FLARING EVENT SPECIFIC JUSTIFICATIONS FORM****Facility:** Red Tank 19 CTB**Flare Date:** 03/27/2024**Duration of Event:** 1 Hour 10 Minutes**MCF Flared:** 225**Start Time:** 04:10 PM**End Time:** 05:20 PM**Cause:** Emergency Flare > Downstream Activity > MPLX > Third Party RT 26 BOO > High Line Pressure**Method of Flared Gas Measurement:** Gas Flare Meter

---

**1. Reason why this event was beyond Operator's control:**

This interruption, restriction or complete shut-in of the gas pipeline by a third-party pipeline compression station operator is downstream of Oxy's custody transfer point and out of Oxy's control to foresee, avoid or prevent from happening and did not stem from any of Oxy's upstream facility activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and preventative maintenance practices. In this case, Red Tank 19 CTB pressured up automatically when USA's Compression's Red Tank 26 Boo compressor station was restricted from pushing forward its sales gas by the sudden and unexpected closing of MPLX gas plant's sales valve, which occurred several times in a 24-hr period. When MPLX has gas plant issues, it affects the Red Tank 26 Boo compressor station, owned, and operated by USA Compression, to push forward their gas and which in turn, restricts Oxy's ability to send gas to the Red Tank Boo compression station. When Oxy's ability to push forward its sales gas is taken away or immensely restricted, with no advance notice, this causes the facility to pressure up and trigger intermittent flaring instances to occur. This event could not have been foreseen, avoided, or prevented from happening as this event occurred with no advance notice or warning to Oxy and its field personnel from MPLX or USA Compression on how much sales gas was being reduced or restricted by a downstream gathering system facility, which is out of Oxy's control. Red Tank 26 Boo is the first stopping point for Oxy's facility sales gas, before it is pushed further down the pipeline for further processing at Mark West, a downstream gathering system.

**2. Steps Taken to limit duration and magnitude of venting or flaring:**

It is OXY's policy to route its stranded gas to a flare during an unforeseen and unavoidable emergency or malfunction, that is beyond Oxy's control to avoid, prevent or foresee, to minimize emissions as much as possible as part of the overall steps taken to limit duration and magnitude of flaring. The flare at this facility has a 98% combustion efficiency to lessen emissions as much as possible. In this case, Red Tank 19 CTB pressured up automatically when USA's Compression's Red Tank 26 Boo compressor station was restricted from pushing forward its sales gas by the sudden and unexpected closing of MPLX gas plant's sales valve, which occurred several times in a 24-hr period. When MPLX has gas plant issues, it affects the Red Tank 26 Boo compressor station, owned, and operated by USA Compression, to push forward their gas and which in turn, restricts Oxy's ability to send gas to the Red Tank Boo compression station. When Oxy's ability to push forward its sales gas is taken away or immensely restricted, with no advance notice, this causes the facility to pressure

up and trigger intermittent flaring instances to occur. In each instance of intermittent flaring, field personnel began storage process procedures on storage wells and choked back several wells to mitigate flaring. All OXY operations and facility equipment were running at maximized optimization prior to each instance of intermittent flaring. This incident was completely out of Oxy's control to prevent from happening yet OXY made every effort to control and minimize emissions as much as possible during this event.

### **3. Corrective Actions taken to eliminate the cause and reoccurrence of venting or flaring:**

Oxy cannot take any corrective actions to eliminate the cause and potential reoccurrence of an MPLX gas flow pipeline restriction or shut-in, as this control issue is downstream of Oxy's custody transfer point and out of Oxy's control to avoid, prevent from happening or reoccurring. MPLX's downstream facilities and associated gas plants and/or operators, will or may have equipment issues which will reoccur from time to time and may trigger a spike in their gas line pressure, which in turn, directly impacts Oxy's ability to send gas to them. When MPLX has downstream activity issues or greatly struggles to handle the volume of gas being sent to them by Oxy, MPLX then restricts Oxy's ability to send gas, which then prompts Oxy to route all of its stranded gas not pushed into the gas pipeline, to flare. OXY makes every effort to control and minimize emissions as much as possible. The only actions that Oxy can take and handle that is within its control, is to keep continually communicate with MPLX and/or USA Compression personnel during these types of situations.

| <b>Determination of Reporting Requirements</b><br>Answer all questions that apply. The Reason(s) statements are calculated based on your answers and may provide additional guidance.                                                                                               |                                                   |
| Was this vent or flare caused by an emergency or malfunction                                                                                                                                                                                                                        | Yes                                               |
| Did this vent or flare last eight hours or more cumulatively within any 24-hour period from a single event                                                                                                                                                                          | No                                                |
| Is this considered a submission for a vent or flare event                                                                                                                                                                                                                           | Yes, minor venting and/or flaring of natural gas. |
| An operator shall file a form C-141 instead of a form C-129 for a release that, includes liquid during venting and/or flaring that is or may be a major or minor release under 19.15.29.7 NMAC.                                                                                     |                                                   |
| Was there at least 50 MCF of natural gas vented and/or flared during this event                                                                                                                                                                                                     | Yes                                               |
| Did this vent or flare result in the release of ANY liquids (not fully and/or completely flared) that reached (or has a chance of reaching) the ground, a surface, a watercourse, or otherwise, with reasonable probability, endanger public health, the environment or fresh water | No                                                |
| Was the vent or flare within an incorporated municipal boundary or withing 300 feet from an occupied permanent residence, school, hospital, institution or church in existence                                                                                                      | No                                                |

|                                                           |                                                                                           |
|-----------------------------------------------------------|-------------------------------------------------------------------------------------------|
| <b>Equipment Involved</b>                                 |                                                                                           |
| Primary Equipment Involved                                | Other (Specify)                                                                           |
| Additional details for Equipment Involved. Please specify | Emergency Flare > Downstream Activity > MPLX > Third Party RT 26 BOO > High Line Pressure |

|                                                                                                                                                             |               |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| <b>Representative Compositional Analysis of Vented or Flared Natural Gas</b><br>Please provide the mole percent for the percentage questions in this group. |               |
| Methane (CH4) percentage                                                                                                                                    | 73            |
| Nitrogen (N2) percentage, if greater than one percent                                                                                                       | 2             |
| Hydrogen Sulfide (H2S) PPM, rounded up                                                                                                                      | 4             |
| Carbon Dioxide (C02) percentage, if greater than one percent                                                                                                | 0             |
| Oxygen (02) percentage, if greater than one percent                                                                                                         | 0             |
| If you are venting and/or flaring because of Pipeline Specification, please provide the required specifications for each gas.                               |               |
| Methane (CH4) percentage quality requirement                                                                                                                | Not answered. |
| Nitrogen (N2) percentage quality requirement                                                                                                                | Not answered. |
| Hydrogen Sufide (H2S) PPM quality requirement                                                                                                               | Not answered. |
| Carbon Dioxide (C02) percentage quality requirement                                                                                                         | Not answered. |

QUESTIONS

| Date(s) and Time(s)                            |            |
|------------------------------------------------|------------|
| Date vent or flare was discovered or commenced | 03/27/2024 |
| Time vent or flare was discovered or commenced | 04:10 PM   |
| Time vent or flare was terminated              | 05:20 PM   |
| Cumulative hours during this event             | 1          |

| Measured or Estimated Volume of Vented or Flared Natural Gas              |                                                                                                             |
|---------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|
| Natural Gas Vented (Mcf) Details                                          | Not answered.                                                                                               |
| Natural Gas Flared (Mcf) Details                                          | Cause: Other   Other (Specify)   Natural Gas Flared   Released: 225 Mcf   Recovered: 0 Mcf   Lost: 225 Mcf. |
| Other Released Details                                                    | Not answered.                                                                                               |
| Additional details for Measured or Estimated Volume(s). Please specify    | Gas Flare Meter                                                                                             |
| Is this a gas only submission (i.e. only significant Mcf values reported) | Yes, according to supplied volumes this appears to be a "gas only" report.                                  |

| Venting or Flaring Resulting from Downstream Activity             |                         |
|-------------------------------------------------------------------|-------------------------|
| Was this vent or flare a result of downstream activity            | Yes                     |
| Was notification of downstream activity received by this operator | No                      |
| Downstream OGRID that should have notified this operator          | [14035] MARATHON OIL CO |
| Date notified of downstream activity requiring this vent or flare | Not answered.           |
| Time notified of downstream activity requiring this vent or flare | Not answered.           |

| Steps and Actions to Prevent Waste                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Please explain reason for why this event was beyond this operator's control                                                      | <p>This interruption, restriction or complete shut-in of the gas pipeline by a third-party pipeline compression station operator is downstream of Oxy's custody transfer point and out of Oxy's control to foresee, avoid or prevent from happening and did not stem from any of Oxy's upstream facility activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and preventative maintenance practices. In this case, Red Tank 19 CTB pressured up automatically when USA's Compression's Red Tank 26 Boo compressor station was restricted from pushing forward its sales gas by the sudden and unexpected closing of MPLX gas plant's sales valve, which occurred several times in a 24-hr period. When MPLX has gas plant issues, it affects the Red Tank 26 Boo compressor station, owned, and operated by USA Compression, to push forward their gas and which in turn, restricts Oxy's ability to send gas to the Red Tank Boo compression station. When Oxy's ability to push forward its sales gas is taken away or immensely restricted, with no advance notice, this causes the facility to pressure up and trigger intermittent flaring instances to occur. This event could not have been foreseen, avoided, or prevented from happening as this event occurred with no advance notice or warning to Oxy and its field personnel from MPLX or USA Compression on how much sales gas was being reduced or restricted by a downstream gathering system facility, which is out of Oxy's control. Red Tank 26 Boo is the first stopping point for Oxy's facility sales gas, before it is pushed further down the pipeline for further processing at Mark West, a downstream gathering system.</p> <p>It is OXY's policy to route its stranded gas to a flare during an unforeseen and unavoidable</p> |

|                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Steps taken to limit the duration and magnitude of vent or flare                  | <p>emergency or malfunction, that is beyond Oxy's control to avoid, prevent or foresee, to minimize emissions as much as possible as part of the overall steps taken to limit duration and magnitude of flaring. The flare at this facility has a 98% combustion efficiency to lessen emissions as much as possible. In this case, Red Tank 19 CTB pressured up automatically when USA's Compression's Red Tank 26 Boo compressor station was restricted from pushing forward its sales gas by the sudden and unexpected closing of MPLX gas plant's sales valve, which occurred several times in a 24-hr period. When MPLX has gas plant issues, it affects the Red Tank 26 Boo compressor station, owned, and operated by USA Compression, to push forward their gas and which in turn, restricts Oxy's ability to send gas to the Red Tank Boo compression station. When Oxy's ability to push forward its sales gas is taken away or immensely restricted, with no advance notice, this causes the facility to pressure up and trigger intermittent flaring instances to occur. In each instance of intermittent flaring, field personnel began storage process procedures on storage wells and choked back several wells to mitigate flaring. All OXY operations and facility equipment were running at maximized optimization prior to each instance of intermittent flaring. This incident was completely out of Oxy's control to prevent from happening yet OXY made every effort to control and minimize emissions as much as possible during this event.</p> |
| Corrective actions taken to eliminate the cause and reoccurrence of vent or flare | <p>Oxy cannot take any corrective actions to eliminate the cause and potential reoccurrence of an MPLX gas flow pipeline restriction or shut-in, as this control issue is downstream of Oxy's custody transfer point and out of Oxy's control to avoid, prevent from happening or reoccurring. MPLX's downstream facilities and associated gas plants and/or operators, will or may have equipment issues which will reoccur from time to time and may trigger a spike in their gas line pressure, which in turn, directly impacts Oxy's ability to send gas to them. When MPLX has downstream activity issues or greatly struggles to handle the volume of gas being sent to them by Oxy, MPLX then restricts Oxy's ability to send gas, which then prompts Oxy to route all of its stranded gas not pushed into the gas pipeline, to flare. OXY makes every effort to control and minimize emissions as much as possible. The only actions that Oxy can take and handle that is within its control, is to keep continually communicate with MPLX and/or USA Compression personnel during these types of situations.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                              |

ACKNOWLEDGMENTS

|                                     |                                                                                                                                                                                                                                                                                                                           |
|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <input checked="" type="checkbox"/> | I acknowledge that I am authorized to submit a <i>Venting and/or Flaring</i> (C-129) report on behalf of this operator and understand that this report can be a <b>complete</b> C-129 submission per 19.15.27.8 and 19.15.28.8 NMAC.                                                                                      |
| <input checked="" type="checkbox"/> | I acknowledge that upon submitting this application, I will be creating a new incident file (assigned to this operator) to track any C-129 forms, pursuant to 19.15.27.7 and 19.15.28.8 NMAC and understand that this submission meets the notification requirements of Paragraph (1) of Subsection G and F respectively. |
| <input checked="" type="checkbox"/> | I hereby certify the statements in this report are true and correct to the best of my knowledge and acknowledge that any false statement may be subject to civil and criminal penalties under the Oil and Gas Act.                                                                                                        |
| <input checked="" type="checkbox"/> | I acknowledge that the acceptance of any C-129 forms by the OCD does not relieve this operator of liability should their operations have failed to adequately investigate, report, and remediate contamination that poses a threat to groundwater, surface water, human health, or the environment.                       |
| <input checked="" type="checkbox"/> | I acknowledge that OCD acceptance of any C-129 forms does not relieve this operator of responsibility for compliance with any other applicable federal, state, or local laws and/or regulations.                                                                                                                          |
