AKM MEASUREMENT SERVICES,LLC. Natural Gas Analysis Report GPA 2172-09/API 14.5 Report with GPA 2145-16 Physical Properties

	Sample Information
Sample Name	RED TANK 19 TRAIN 2 CHECK
Technician	ANTHONY DOMINGUEZ
Analyzer Make & Model	INFICON MICRO GC
Last Calibration/Validation Date	03-22-2024
Meter Number	156221
Air temperature	77
Flow Rate (MCF/Day)	23212.6
Heat Tracing	HEATED HOSE & GASIFIER
Sample description/mtr name	RED TANK 19 TRAIN 2 CHECK
Sampling Method	FILL & EMPTY
Operator	OCCIDENTAL PETROLEUM, OXY USA INC
State	NEW MEXICO
Region Name	PERMIAN_RESOURCES
Asset	NEW MEXICO
System	RED TANK
FLOC	OP-L2151-BT001
Sample Sub Type	СТВ
Sample Name Type	METER
Vendor	AKM MEASUREMENT
Cylinder #	38986
Sampled by	ERIC CARTER
Sample date	3-21-2024
Analyzed date	3-26-2024
Method Name	C9
Injection Date	2024-03-26 18:59:57
Report Date	2024-03-26 19:00:44
EZReporter Configuration File	1-16-2023 OXY GPA C9+ H2S #2.cfgx
Source Data File	5113d902-e4cb-40af-be68-3066ebcdb576
NGA Phys. Property Data Source	GPA Standard 2145-16 (FPS)
Data Source	INFICON Fusion Connector

UPSET FLARING EVENT SPECIFIC JUSTIFICATIONS FORM

Facility: Red Tank 19 CTB Flare Date: 07/03/2024

Duration of Event: 1 Hour 40 Minutes **MCF Flared:** 399

Start Time: 08:10 AM End Time: 09:50 AM

Cause: Emergency Flare > Red Tank 19 CGL > Third Party Compressor Vendor > NGSG > Unscheduled

Maintenance Work

Method of Flared Gas Measurement: Gas Flare Meter

1. Reason why this event was beyond Operator's control:

This emissions event was caused by the unforeseen, unexpected, sudden, and unavoidable breakdown of equipment or process that was beyond the owner/operator's control and did not stem from activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and preventative maintenance practices. Oxy engages in respectable and good facility operation practices while also maintaining its continuous facility equipment preventative maintenance program. In this case, third-party compressor vendor NGSG, arrived at the Red Tank 19 CGL, to perform compressor preventative maintenance work, which was not previously scheduled nor communicated in advance to Oxy personnel. NGSG mechanics did not coordinate with OXY personnel on the preventative maintenance work prior to their arrival which required several gas compressors to be brought offline, one by one, which in turn, then triggered a flaring event to occur at the Red Tank 19 CTB. This event is out of OXY's control yet OXY made every effort to control and minimize emissions as much as possible.

2. Steps Taken to limit duration and magnitude of venting or flaring:

It is OXY's policy to route its stranded gas to a flare during an unforeseen and unavoidable emergency or malfunction, that is beyond Oxy's control to avoid, prevent or foresee, to minimize emissions as much as possible as part of the overall steps taken to limit duration and magnitude of flaring. The flare at this facility has a 98% combustion efficiency to lessen emissions as much as possible. In this case, third-party compressor vendor NGSG, arrived at the Red Tank 19 CGL, to perform compressor preventative maintenance work, which was not previously scheduled nor communicated in advance to Oxy personnel. NGSG mechanics did not coordinate with OXY personnel on the preventative maintenance work prior to their arrival which required several gas compressors to be brought offline, one by one, which in turn, then triggered a flaring event to occur at the Red Tank 19 CTB. As soon as flaring was triggered, Oxy personnel began choking back high GOR wells and opened up storage wells. This event is out of OXY's control yet OXY made every effort to control and minimize emissions as much as possible.

3. Corrective Actions taken to eliminate the cause and reoccurrence of venting or flaring:

Oxy is limited in the corrective actions available to them to eliminate the cause and potential reoccurrence of third-party compressor vendor's unscheduled preventative maintenance. Oxy continually strives to maintain and operate all its equipment in a manner consistent with good practices for minimizing emissions and reducing the number of emission events. Oxy has a strong and positive equipment preventative maintenance program in place. The only action Oxy can take in these type of situations, is to continually communicate to NGSG that advance notifications of all compression work must be provided, so that Oxy personnel can make arrangements to reduce production to avoid emissions as a result of this type of work.

ACKNOWLEDGMENTS

V	I acknowledge that I am authorized to submit a Venting and/or Flaring (C-129) report on behalf of this operator and understand that this report can be a complete C-129 submission per 19.15.27.8 and 19.15.28.8 NMAC.
V	I acknowledge that upon submitting this application, I will be creating a new incident file (assigned to this operator) to track any C-129 forms, pursuant to 19.15.27.7 and 19.15.28.8 NMAC and understand that this submission meets the notification requirements of Paragraph (1) of Subsection G and F respectively.
V	I hereby certify the statements in this report are true and correct to the best of my knowledge and acknowledge that any false statement may be subject to civil and criminal penalties under the Oil and Gas Act.
V	I acknowledge that the acceptance of any C-129 forms by the OCD does not relieve this operator of liability should their operations have failed to adequately investigate, report, and remediate contamination that poses a threat to groundwater, surface water, human health, or the environment.
✓	I acknowledge that OCD acceptance of any C-129 forms does not relieve this operator of responsibility for compliance with any other applicable federal, state, or local laws and/or regulations.
