Pima Environmental Services, LLC. (Pima) has been contracted by Devon Energy Production Company, LP (Devon) to perform a spill assessment and submit this closure report for a produced water release that occurred at the Bell Lake 19 State 3H (Bell Lake). The initial C-141 was submitted on July 4, 2014 (Appendix C). This incident was assigned Incident ID NTO1417636911 by the New Mexico Oil Conservation Division (NMOCD).

Site Characterization

The Bell Lake is located approximately twenty-five (25) miles northwest of Jal, NM. This spill site is in Unit O, Section 19, Township 24S, Range 33E, Latitude 32.1964722 Longitude -103.6089478, Lea County, NM. Figure 1 references a Location Map.

Per the New Mexico Bureau of Geology and Mineral Resources, the geology is made up of Interlayered eolian and piedmont deposits Interlayered eolian sands and piedmont-slope deposits along the eastern flank of the Pecos River valley, primarily between Roswell and Carlsbad. Typically capped by thin eolian deposits. The soil in this area is made up of Berino-Cacique loamy fine sands association, according to the United States Department of Agriculture Natural Resources Conservation Service soil survey (Appendix B). The drainage class in this area is well drained. There is a low potential for karst geology to be present around the Bell Lake (Figure 3).

According to the New Mexico Office of the State Engineer, depth to the nearest groundwater in this area is greater than 55 feet below grade surface (BGS). According to the United States Geological Survey (USGS), the nearest groundwater is 97.35 feet BGS. The groundwater information from C-04768 POD 1, which is approximately .03 feet northeast of the release area, establishes a lack of groundwater at 55' BGS. This POD was drilled and recorded by Vision Resources on December 13, 2023. The well bore was left open for the required 72-hour time frame then checked for saturation. No saturation or water-bearing soil was encountered, the well was then plugged on December 16, 2023. Depth to groundwater at the Bell Lake will be classified as 51-100' BGS. The closest waterway is a Salt Playa located approximately 13.18 miles to the northeast of this location. See Appendix A for referenced water surveys.

Release Information

NT01417636911: On June 19, 2014, Solids control cuttings bin overflowed causing a spill. The released fluids were calculated to be approximately 30 barrels (bbls) of produced water. A vacuum truck was able to recover all 30 bbls of standing fluid.

Remediation Activities, Site Assessment, and Soil Sampling Results

On February 6, 2023, Pima mobilized personnel to the site to begin collecting soil samples from the spill area. The laboratory results of this sampling event can be found in the following data table. An Initial Site Map can be found in Figure 4.

Countermeasures Due to Rejection (301790)

On January 18, 2024, the NMOCD denied the remediation closure report citing:

"The OCD has rejected the submitted Application for administrative approval of a release notification and corrective action (C-141), for the incident ID (n#) NTO1417636911 for the following reasons:

- Horizontal delineation must meet the requirements of the reclamation standards 19.15.29.13 NMAC (600 mg/kg Cl, 100 mg/kg TPH, 50 mg/kg benzene) or OCD approved "background" values for the upper 4 feet of the impacted area. Confirmation soil samples must consist of five-point composite samples from the side wall and base individual grab samples from any wet or discolored areas, representing a surface area of no more than 200 ft² unless otherwise approved. Submitted report did not include documentation of sampling notification. Submit a report via the OCD permitting portal by April 19, 2024.

On August 15, 2024, in response to the rejected closure report, a Pima field technician was dispatched to the Bell Lake to conduct a confirmation sampling event, after submitting a 48-hour sampling notification (Appendix C). Three bottom samples labeled CS1-CS3 were collected at surface, 1', 2', 3', and 4' of the impacted areas. Four 5-point composite sidewall samples from 0', 1', 2', 3', 4' BGS labeled CSW1-CSW4 were collected. Each sample represented a surface area of no more than 200 ft². The laboratory results of this sampling event can be found in the following data table. A Confirmation Sample Map can be found in Figure 5.

QUESTIONS

Nature and Volume of Release (continued)	
Is this a gas only submission (i.e. only significant Mcf values reported)	No, according to supplied volumes this does not appear to be a "gas only" report.
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	Yes
Reasons why this would be considered a submission for a notification of a major release	From paragraph A. "Major release" determine using: (1) an unauthorized release of a volume, excluding gases, of 25 barrels or more.
With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.	

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.

The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	Not answered.

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
