Hey Brett,

I left you a voice mail yesterday regarding the Todd 36 State #1 release. I had a few questions on site location logistics. I was waiting to hear back from you on it before I sent out the initial approval with the COA's on it just in case I needed to make any changes to the original documents. I am also waiting to send out on the initial approval of the Laguna Salado South 1 that we talked about over the phone that was needing updated coordinates.

Just following up if you could get back to me at your earliest convenience that would be great.

Thank you kindly,

Crystal Weaver

Hello Mike Shoemaker,

My name is Crystal, I work with Mike Bratcher, I am the other Environmental Regulator in District II Artesia. I was out on site at Cotton Draw Unit #181 this last Monday 2/27/17 with Kimberly and Robbie from Talon.

Anyways, I am hoping since you are going to be the guy we deal with from here on, regarding Devon, that you could help me out with something. I have called and left messages for Brett Fuls and sent him a follow up email letting him know that I need some corrections on logistical information from initial reporting on C-141's, from you all, before I could finish processing them.

I sent him this on 2/23/17...

Subject: Meeting and Contact information

Mike,

I just wanted to quickly reach out and introduce myself and provide you with my contact information which is provided below. I am Mike Shoemaker and I am now working with Brett Fulks here at Devon. Moving forward I will be working to take over the spills reporting and remediation work as Brett begins to focus more on the air programs. With that being said I was wondering if you might have some time to sit down this week to discuss the Cotton Draw Unit #181 with myself, Brett, and Talon LPE (David and Kimberly). I am going to propose a few times where our schedules are most but also realize that some of them are short notice for you so if they do not work please propose an alternate time and will get together to see if we can make it work on our side. In turn, would any of the following times work for you?

- Tuesday 02/28 – Anytime between 1 p.m. and 4 p.m.-Short notice but would be the best option for Brett and I
- Wednesday 03/01- Anytime between 9:00 a.m. and 11:30 a.m. – I know that Talon has training going on this day so it may not be a great option all together
- Thursday -03/02- Anytime between 10:00 a.m. and noon

Will look forward to hearing back from you.

Thanks,

Mike Shoemaker

Crystal/Mike,

Mike Shoemaker and I were having trouble with our GIS program earlier this afternoon but Mike will be working with someone tomorrow to try and get you an answer on the proper surface/minerals owner for the Todd release. Again, I'd like to apologize for the mistake on this and for the delay on getting back to you.

For the CDU 90(182), Mike Shoemaker will be working with someone tomorrow to prepare the final C-141 and the initial/final approved work plans will be attached with the lab data.

For the Warthog, I heard back from Hungry Horse, they have no data on this release. I will be getting with

For the CDU 181 release, we will be working with Talon with hopes of getting something out to you next week in the form of a work plan, we will copy Amber Groves on this as well.

I just want to say again that I apologize for my misunderstanding of how the District 2 structure worked with there being two of you. You'd think after almost two years I would have understood. I have spoken with Mike Shoemaker about my confusion, and we will get with our contractors to make sure they all understand that any and all NMOCD spill related work will have you both copied on all submissions going forward.

I also plan to get with Amber tomorrow to apologize to her over the short notice of the meeting, this was not intentional, just a matter of a time crunch and internal issues getting mikes IT call in number set up.

Thank you both for taking the time out of your day to meet with us over all of this, I know you both have very limited time and we really appreciate it.

Thanks,

N/A

Describe Cause of Problem and Remedial Action Taken.*
The bull plug inside the tin horn became loose resulting in a release of 70 BBLS of produced water. The produced water released came from an injection line going to the Todd 36 State 1 SWD. The pumps were turned off and the transfer line was shut in to prevent further release. Repairs are being made to the bull plug in the tin horn.

Describe Area Affected and Cleanup Action Taken.*
Approximately 70 BBLS produced water was released from a bull plug inside the tin horn on the injection line going to the Todd 36 State 1 SWD onto the pasture. The released produced water flowed in a Northern direction away from the tin horn. The approximate size of the release was 100 yards by 8 feet wide. The vacuum truck recovered 2 BBLS produced water. A remediation contractor will be contacted for remediation.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

A remediation contractor will be contacted for remediation.		
I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

2RP 4105

Released to Imaging: 9/17/2024 10:08:19 AM

Operator/Responsible Party,

The OCD has received the form C-141 you provided on 2/1/17 regarding an unauthorized release. The information contained on that form has been entered into our incident database and remediation case number 2RP-4105 has been assigned. Please refer to this case number in all future correspondence.

It is the Division's obligation under both the Oil & Gas Act and Water Quality Act to provide for the protection of public health and the environment. Our regulations (19.15.29.11 NMAC) state the following,

The responsible person shall complete division-approved corrective action for releases that endanger public health or the environment. The responsible person shall address releases in accordance with a remediation plan submitted to and approved by the division or with an abatement plan submitted in accordance with 19.15.30 NMAC. [emphasis added]

Release characterization is the first phase of corrective action unless the release is ongoing or is of limited volume and all impacts can be immediately addressed. Proper and cost-effective remediation typically cannot occur without adequate characterization of the impacts of any release. Furthermore, the Division has the ability to impose reasonable conditions upon the efforts it oversees. As such, the Division is requiring a workplan for the characterization of impacts associated with this release be submitted to the OCD District 2 office in Albuquerque on or before 3/15/17. If and when the release characterization workplan is approved, there will be an associated deadline for submittal of the resultant investigation report. Modest extensions of time to these deadlines may be granted, but only with acceptable justification.

The goals of a characterization effort are: 1) determination of the lateral and vertical extents along with the magnitude of soil contamination. 2) determine if groundwater or surface waters have been impacted. 3) If groundwater or surface waters have been impacted, what are the extents and magnitude of that impact. 4) The characterization of any other adverse impacts that may have occurred (examples: impacts on vegetation, impacts on wildlife, air quality, loss of use of property, etc.). To meet these goals as quickly as possible, the following items must, at a minimum, be addressed in the release characterization workplan and subsequent reporting:

- Horizontal delineation of soil impacts in each of the four cardinal compass directions. Adsorbed soil contamination must be characterized for the following constituents using the associated laboratory methods: benzene, toluene, ethylbenzene, and total xylenes by either Method 8260 or 8021, total petroleum hydrocarbons by Method 8015 extended range (GRO+DRO+MRO; C₆ thru C₃₆), and for chloride by Method 300. This is not an exclusive list of potential contaminants. Analyzed parameters should be modified based on the nature of the released substance(s). Soil sampling must be both within the impacted area and beyond.
- Vertical delineation of soil impacts. Adsorbed soil contamination must be characterized for the following constituents using the associated laboratory methods: benzene, toluene, ethylbenzene, and total xylenes by either Method 8260 or 8021, total petroleum hydrocarbons by Method 8015 extended range (GRO+DRO+MRO; C₆ thru C₃₆), and for chloride by Method 300. As above, this is not an exclusive list of potential contaminants and can be modified. Vertical characterization samples should be taken at depth intervals no greater than five feet apart. Lithologic description of encountered soils must also be provided. At least ten vertical feet of soils with contaminant concentrations at or below these values must be demonstrated as existing above the water table.
- Nominal detection limits for field and laboratory analyses must be provided.
- Composite sampling is not generally allowed.
- Field screening and assessment techniques are acceptable (headspace, titration, EC [include algorithm for validation purposes], EM, etc.), but the sampling and assay procedures must be clearly defined. Copies of field notes are highly desirable. A statistically significant set of split samples must be submitted for confirmatory laboratory analysis, including the laterally farthest and vertically deepest sets of soil samples. Make sure there are at least two soil samples submitted

for laboratory analysis from each borehole or test pit (highest observed contamination and deepest depth investigated). Copies of the actual laboratory results must be provided including chain of custody documentation.

- Probable depth to shallowest protectable groundwater and lateral distance to nearest surface water. If there is an estimate of groundwater depth, the information used to arrive at that estimate must be provided. If there is a reasonable assumption that the depth to protectable water is 50 feet or less, the responsible party should anticipate the need for at least one groundwater monitoring well to be installed in the area of likely maximum contamination.

- If groundwater contamination is encountered, an additional investigation workplan may be required to determine the extents of that contamination. Groundwater and/or surface water samples, if any, must be analyzed by a competent laboratory for volatile organic hydrocarbons (typically Method 8260 full list), total dissolved solids, pH, major anions and cations including chloride and sulfate, dissolved iron, and dissolved manganese. The investigation workplan must provide the groundwater sampling method(s) and sample handling protocols. To the fullest extent possible, aqueous analyses must be undertaken using nominal method detection limits. As with the soil analyses, copies of the actual laboratory results must be provided including chain of custody documentation.

- Accurately scaled and well-drafted site maps must be provided providing the location of borings, test pits, monitoring wells, potentially impacted areas, and significant surface features including roads and site infrastructure that might limit either the release characterization or remedial efforts. Field sketches may be included in subsequent reporting, but should not be considered stand-alone documentation of the site's layout. Digital photographic documentation of the location and fieldwork is recommended, especially if unusual circumstances are encountered.

Nothing herein should be interpreted to preclude emergency response actions or to imply immediate remediation by removal cannot proceed as warranted. Nonetheless, characterization of impacts and confirmation of the effectiveness of remedial efforts must still be provided to the OCD before any release incident will be closed.

Sheila,

I have included a scanned copy of the signed Initial C-141 Remediation Permit along with an attached Conditions of Approval. Please note that because of the delay experienced in hearing back from you all with the correction info unfortunately your timeframe to respond to the COAs is now right around the corner. So with this one if you all need any extensions on time please contact us and let us know where you are at in the process and what kind of extension you all would need.

The OCD tracking number for this event is 2RP-4105.

Thank you,

Crystal Weaver

Crystal,

I have heard back from my contractor today and they were able to go to the field and complete delineation up to 4-5 feet. From their field observations we are going to continue with further delineation so they are placing a one call and we will be scheduling a drilling rig for later this week to continue. Please let me know if you have any questions.

Crystal,

We are actively working on this location and have the contractor set up to complete delineation work no later than Monday (03/13/17). Delineation will be attempted by using a hand auger and samples will be collected and expedited with the lab. If we are unable to delineate by hand to a 4-foot depth we will then have to regroup, make a One Call and bring in a backhoe for further delineation which will carry our project further out. Once I hear back from the contractor on Monday I will follow back up with you on our expected schedule.

Thanks,

Mike Shoemaker
