**UPSET FLARING EVENT SPECIFIC JUSTIFICATIONS FORM****Facility:** Lost Tank 18 CPF**Flare Date:** 10/03/2024**Duration of Event:** 1 Hour 10 Minutes**MCF Flared:** 58**Start Time:** 09:30 AM**End Time:** 10:40 AM**Cause:** Emergency LP Flare > Equipment Malfunctions > VRU's**Method of Flared Gas Measurement:** Gas Flare Meter

---

**1. Reason why this event was beyond Operator's control:**

The emissions were caused by the sudden, unavoidable breakdown of equipment or process that was beyond the owner/operator's control and did not stem from activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and maintenance practices. Internal Oxy procedures ensure that upon a sudden and unexpected flaring event, production techs are promptly notified, and are instructed to assess the issue as soon as possible to take prompt corrective action and minimize emissions. In this situation, the high pressure VRU units simultaneously and unexpectedly malfunctioned when the facility pressured up, which in turn, triggered a flaring event. Prior to the flaring incident occurring, all OXY operations and VRU's were operating at peak optimization levels. This flaring situation was beyond OXY's control, but Oxy took all possible measures to reduce emissions effectively.

**2. Steps Taken to limit duration and magnitude of venting or flaring:**

It is OXY's policy to route all stranded gas to a flare during an unforeseen and unavoidable emergency or malfunction, that is beyond Oxy's control to avoid, prevent or foresee, to minimize emissions as much as possible as part of the overall steps taken to limit duration and magnitude of flaring. In this situation, the high pressure VRU units simultaneously and unexpectedly malfunctioned when the facility pressured up, which in turn, triggered a flaring event. Prior to the flaring incident occurring, all OXY operations and VRU's were operating at peak optimization levels. Steps were immediately taken to reduce and mitigate the volume of gas being sent to the flare by choking back several high GOR wells and then restarting the VRU units. A minimal of gas from the facility's VRT was sent to the flare out of necessity to protect personnel and equipment as a safeguard until the VRU's could be restarted and returned to normal maximized operation.

**3. Corrective Actions taken to eliminate the cause and reoccurrence of venting or flaring:**

Oxy's ability to take corrective action to prevent and address malfunctions in a VRU is limited. Despite proper design and operation of the VRU, whether it be low- or high-pressure, unexpected mechanical or technical issues can arise without warning and are often unforeseeable, leading to without warning equipment malfunctions.

| <b>Determination of Reporting Requirements</b><br>Answer all questions that apply. The Reason(s) statements are calculated based on your answers and may provide additional guidance.                                                                                               |                                                   |
| Was this vent or flare caused by an emergency or malfunction                                                                                                                                                                                                                        | Yes                                               |
| Did this vent or flare last eight hours or more cumulatively within any 24-hour period from a single event                                                                                                                                                                          | No                                                |
| Is this considered a submission for a vent or flare event                                                                                                                                                                                                                           | Yes, minor venting and/or flaring of natural gas. |
| An operator shall file a form C-141 instead of a form C-129 for a release that, includes liquid during venting and/or flaring that is or may be a major or minor release under 19.15.29.7 NMAC.                                                                                     |                                                   |
| Was there at least 50 MCF of natural gas vented and/or flared during this event                                                                                                                                                                                                     | Yes                                               |
| Did this vent or flare result in the release of ANY liquids (not fully and/or completely flared) that reached (or has a chance of reaching) the ground, a surface, a watercourse, or otherwise, with reasonable probability, endanger public health, the environment or fresh water | No                                                |
| Was the vent or flare within an incorporated municipal boundary or withing 300 feet from an occupied permanent residence, school, hospital, institution or church in existence                                                                                                      | No                                                |

QUESTIONS

| Date(s) and Time(s)                            |            |
|------------------------------------------------|------------|
| Date vent or flare was discovered or commenced | 10/03/2024 |
| Time vent or flare was discovered or commenced | 09:30 AM   |
| Time vent or flare was terminated              | 10:40 AM   |
| Cumulative hours during this event             | 1          |

| Measured or Estimated Volume of Vented or Flared Natural Gas              |                                                                                                           |
|---------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| Natural Gas Vented (Mcf) Details                                          | Not answered.                                                                                             |
| Natural Gas Flared (Mcf) Details                                          | Cause: Other   Other (Specify)   Natural Gas Flared   Released: 58 Mcf   Recovered: 0 Mcf   Lost: 58 Mcf. |
| Other Released Details                                                    | Not answered.                                                                                             |
| Additional details for Measured or Estimated Volume(s). Please specify    | Gas Flare Meter                                                                                           |
| Is this a gas only submission (i.e. only significant Mcf values reported) | Yes, according to supplied volumes this appears to be a "gas only" report.                                |

| Venting or Flaring Resulting from Downstream Activity             |               |
|-------------------------------------------------------------------|---------------|
| Was this vent or flare a result of downstream activity            | No            |
| Was notification of downstream activity received by this operator | Not answered. |
| Downstream OGRID that should have notified this operator          | Not answered. |
| Date notified of downstream activity requiring this vent or flare | Not answered. |
| Time notified of downstream activity requiring this vent or flare | Not answered. |

| Steps and Actions to Prevent Waste                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| For this event, this operator could not have reasonably anticipated the current event and it was beyond this operator's control. | True                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Please explain reason for why this event was beyond this operator's control                                                      | The emissions were caused by the sudden, unavoidable breakdown of equipment or process that was beyond the owner/operator's control and did not stem from activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and maintenance practices. Internal Oxy procedures ensure that upon a sudden and unexpected flaring event, production techs are promptly notified, and are instructed to assess the issue as soon as possible to take prompt corrective action and minimize emissions. In this situation, the high pressure VRU units simultaneously and unexpectedly malfunctioned when the facility pressured up, which in turn, triggered a flaring event. Prior to the flaring incident occurring, all OXY operations and VRU's were operating at peak optimization levels. This flaring situation was beyond OXY's control, but Oxy took all possible measures to reduce emissions effectively. |
| Steps taken to limit the duration and magnitude of vent or flare                                                                 | It is OXY's policy to route all stranded gas to a flare during an unforeseen and unavoidable emergency or malfunction, that is beyond Oxy's control to avoid, prevent or foresee, to minimize emissions as much as possible as part of the overall steps taken to limit duration and magnitude of flaring. In this situation, the high pressure VRU units simultaneously and unexpectedly malfunctioned when the facility pressured up, which in turn, triggered a flaring event. Prior to the flaring incident occurring, all OXY operations and VRU's were operating at peak optimization levels. Steps were immediately taken to reduce and mitigate the volume of gas being sent to the flare by choking back several high GOR wells and then restarting the VRU units. A minimal of gas from the facility's VRT was sent to the flare out of necessity to                                                                                                |

|                                                                                   |                                                                                                                                                                                                                                                                                                                                           |
|-----------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                   | protect personnel and equipment as a safeguard until the VRU's could be restarted and returned to normal maximized operation.                                                                                                                                                                                                             |
| Corrective actions taken to eliminate the cause and reoccurrence of vent or flare | Oxy's ability to take corrective action to prevent and address malfunctions in a VRU is limited. Despite proper design and operation of the VRU, whether it be low- or high-pressure, unexpected mechanical or technical issues can arise without warning and are often unforeseeable, leading to without warning equipment malfunctions. |
