UPSET FLARING EVENT SPECIFIC JUSTIFICATIONS FORM**Facility:** Falcon Ridge CPF**Flare Date:** 11/23/2024**Duration of Event:** 3 Hour 12 Minutes**MCF Flared:** 350**Start Time:** 09:00 AM**End Time:** 12:12 PM**Cause:** Emergency Flare > Planned Maintenance > Production Separator Cleanout > Purging Wells of O2**Method of Flared Gas Measurement:** Gas Flare Meter

1. Reason why this event was beyond Operator's control:

In this case, facility equipment and the well were purged after well work and production separator cleaning. Oxygen had to be purged from the line connecting the well to the facility as well as from the production separator. During the scheduled maintenance, oxygen was inadvertently introduced to the well due to some of the work performed. This situation was beyond Oxy's control. Simultaneously, the production separator was cleaned while the well was offline. Oxy took all possible measures to manage and reduce emissions to the greatest extent.

2. Steps Taken to limit duration and magnitude of venting or flaring:

In this case, facility equipment and the well were purged after well work and production separator cleaning. Oxygen had to be purged from the line connecting the well to the facility as well as from the production separator. During the scheduled maintenance, oxygen was inadvertently introduced to the well due to some of the work performed. This situation was beyond Oxy's control. Simultaneously, the production separator was cleaned while the well was offline. Oxy implemented comprehensive measures to manage and reduce emissions effectively by utilizing an oxygen monitor. This allowed them to determine the gas quality for sales once the desired concentration was achieved. The occurrence of this event was beyond OXY's control. OXY took all possible measures to manage and reduce emissions to the greatest extent.

3. Corrective Actions taken to eliminate the cause and reoccurrence of venting or flaring:
