### AKM MEASUREMENT SERVICES,LLC. Natural Gas Analysis Report GPA 2172-09/API 14.5 Report with GPA 2145-16 Physical Properties

	Sample Information
Sample Name	LOST TANK 18 FACILITY PROD 2
Technician	ANTHONY DOMINGUEZ
Analyzer Make & Model	INFICON MICRO GC
Last Calibration/Validation Date	12-15-2023
Meter Number	16412P
Air temperature	59
Flow Rate (MCF/Day)	19315
Heat Tracing	HEATED HOSE & GASIFIER
Sample description/mtr name	LOST TANK 18 FACILITY PROD 2
Sampling Method	FILL & EMPTY
Operator	OCCIDENTAL PETROLEUM, OXY USA INC
State	NEW MEXICO
Region Name	PERMIAN_RESOURCES
Asset	NEW MEXICO
System	LOST TANK
FLOC	OP-DELNE-BT010
Sample Sub Type	СТВ
Sample Name Type	METER
Vendor	AKM MEASUREMENT
Cylinder #	38967
Sampled by	SCOTT
Sample date	12-11-2023
Analyzed date	12-19-2023
Method Name	C9
Injection Date	2023-12-19 17:22:49
Report Date	2023-12-19 17:24:34
EZReporter Configuration File	1-16-2023 OXY GPA C9+ H2S #2.cfgx
Source Data File	c9df624d-557a-4940-b08e-304ec2186c4a
NGA Phys. Property Data Source	GPA Standard 2145-16 (FPS)
Data Source	INFICON Fusion Connector

### **Component Results**

Total:		100.3379		100.0000	1334.2	0.80179	19.943	

### **Results Summary**

Result	Dry	Sat.
Total Un-Normalized Mole%	100.3379	
Pressure Base (psia)	14.730	
Temperature Base (Deg. F)	60.00	
Released to Temperature 1/248/24025 7:03:52 1	PM 83.3	

Received by OCD: 1/28/2025 6:58:56 PM	Dry	Sat.	Page
Flowing Pressure (psia)	100.2		
Gross Heating Value (BTU / Ideal cu.ft.)	1334.2	1311.0	
Gross Heating Value (BTU / Real cu.ft.)	1340.0	1317.3	
Relative Density (G), Real	0.8049	0.8022	

### **Monitored Parameter Report**

Parameter	Value	Lower Limit	Upper Limit	Status	
Total un-normalized amount	100.3379	97.0000	103.0000	Pass	

#### **UPSET FLARING EVENT SPECIFIC JUSTIFICATIONS FORM**

Facility: Lost Tank 18 CPF Flare Date: 01/13/2025

**Duration of Event:** 44 Minutes **MCF Flared:** 130

Start Time: 06:02 AM End Time: 06:46 AM

**Cause:** Emergency Flare > Equipment Malfunction > Production Separator > VRU's

Method of Flared Gas Measurement: Gas Flare Meter

#### 1. Reason why this event was beyond Operator's control:

The emissions were caused by the sudden, unavoidable breakdown of equipment or process that was beyond the owner/operator's control and did not stem from activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and maintenance practices. Internal Oxy procedures ensure that upon a sudden and unexpected flaring event, production techs are promptly notified and are instructed to assess the issue as soon as possible to take prompt corrective action and minimize emissions. In this situation, the production separator oil dump remained open, resulting in train 1 stabilizer pressurizing and triggering a flaring event. As a result of the malfunction with the production oil dump remaining open, the facilities VRU's could not keep up with the production rates. Oxy operators consistently monitor the facility for any deviations from normal operating parameters; however, this was an abnormal failure that would be difficult to predict. Prior to the flaring incident occurring, all OXY operations and VRU's were operating at peak optimization levels. This flaring situation was beyond OXY's control, but Oxy took all possible measures to reduce emissions effectively.

#### 2. Steps Taken to limit duration and magnitude of venting or flaring:

It is OXY's policy to route all stranded gas to a flare during an unforeseen and unavoidable emergency or malfunction, that is beyond Oxy's control to avoid, prevent or foresee, to minimize emissions as much as possible as part of the overall steps taken to limit duration and magnitude of flaring. The flare at this facility has a 98% combustion efficiency to lessen emissions as much as possible. In this situation, the production separator oil dump remained open, resulting in train 1 stabilizer pressurizing and triggering a flaring event. As a result of the malfunction with the production oil dump remaining open, the facilities VRU's could not keep up with the production rates. Steps were immediately taken to reduce and mitigate the volume of gas being sent to flare by choking base wells there is no other option to reroute or offload to a secondary midstream operator from this facility.

#### 3. Corrective Actions taken to eliminate the cause and reoccurrence of venting or flaring:

Oxy's ability to take corrective action to prevent and address malfunctions in a VRU is limited. Despite proper design and operation of the VRU, whether it be low- or high-pressure, unexpected mechanical or technical issues can arise without warning and are often unforeseeable, leading to without warning equipment malfunctions.

DEFINITIONS

Action 425956

#### **DEFINITIONS**

Operator:	OGRID:
OXY USA INC	16696
P.O. Box 4294	Action Number:
Houston, TX 772104294	425956
	Action Type:
	[C-129] Venting and/or Flaring (C-129)

#### **DEFINITIONS**

For the sake of brevity and completeness, please allow for the following in all groups of questions and for the rest of this application:

- this application's operator, hereinafter "this operator";
- venting and/or flaring, hereinafter "vent or flare";
- any notification or report(s) of the C-129 form family, hereinafter "any C-129 forms";
- the statements in (and/or attached to) this, hereinafter "the statements in this";
- and the past tense will be used in lieu of mixed past/present tense questions and statements.

QUESTIONS, Page 2

Action 425956

QUES	STIONS (continued)
Operator:	OGRID:
OXY USA INC P.O. Box 4294	16696
Houston, TX 772104294	Action Number: 425956
	Action Type:  [C-129] Venting and/or Flaring (C-129)
QUESTIONS	
Date(s) and Time(s)	
Date vent or flare was discovered or commenced	01/13/2025
Time vent or flare was discovered or commenced	06:02 AM
Time vent or flare was terminated	06:46 AM
Cumulative hours during this event	1
Measured or Estimated Volume of Vented or Flared Natural Gas	
Natural Gas Vented (Mcf) Details	Not answered.
Natural Gas Flared (Mcf) Details	Cause: Other   Other (Specify)   Natural Gas Flared   Released: 130 Mcf   Recovered: 0 Mcf   Lost: 130 Mcf.
Other Released Details	Not answered.
Additional details for Measured or Estimated Volume(s). Please specify	Gas Flare Meter
Is this a gas only submission (i.e. only significant Mcf values reported)	Yes, according to supplied volumes this appears to be a "gas only" report.
Venting or Flaring Resulting from Downstream Activity	
Was this vent or flare a result of downstream activity	No
Was notification of downstream activity received by this operator	Not answered.
Downstream OGRID that should have notified this operator	Not answered.
Date notified of downstream activity requiring this vent or flare	Not answered.
Time notified of downstream activity requiring this vent or flare	Not answered.
, , , , , , , , , , , , , , , , , , ,	
Steps and Actions to Prevent Waste	
For this event, this operator could not have reasonably anticipated the current eve and it was beyond this operator's control.	nt True
Please explain reason for why this event was beyond this operator's control	The emissions were caused by the sudden, unavoidable breakdown of equipment or process that was beyond the owner/operator's control and did not stem from activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and maintenance practices. Internal Oxy procedures ensure that upon a sudden and unexpected flaring event, production techs are promptly notified and are instructed to assess the issue as soon as possible to take prompt corrective action and minimize emissions. In this situation, the production separator oil dump remained open, resulting in train 1 stabilizer pressurizing and triggering a flaring event. As a result of the malfunction with the production oil dump remaining open, the facilities VRU's could not keep up with the production rates. Oxy operators consistently monitor the facility for any deviations from normal operating parameters; however, this was an abnormal failure that would be difficult to predict. Prior to the flaring incident occurring, all OXY operations and VRU's were operating at peak optimization levels. This flaring situation was beyond OXY's control, but Oxy took all possible

measures to reduce emissions effectively.

It is OXY's policy to route all stranded gas to a flare during an unforeseen and unavoidable emergency or malfunction, that is beyond Oxy's control to avoid, prevent or foresee, to minimize emissions as much as possible as part of the overall steps taken to limit duration and magnitude of flaring. The flare at this facility has a 98% combustion efficiency to lessen emissions as much as possible. In this situation, the production separator oil dump

remained open, resulting in train 1 stabilizer pressurizing and triggering a flaring event. As a

Steps taken to limit the duration and magnitude of vent or flare

	result of the malfunction with the production oil dump remaining open, the facilities VRU's could not keep up with the production rates. Steps were immediately taken to reduce and mitigate the volume of gas being sent to flare by choking base wells there is no other option to reroute or offload to a secondary midstream operator from this facility.
Corrective actions taken to eliminate the cause and reoccurrence of vent or flare	Oxy's ability to take corrective action to prevent and address malfunctions in a VRU is limited. Despite proper design and operation of the VRU, whether it be low- or high-pressure, unexpected mechanical or technical issues can arise without warning and are often unforeseeable, leading to without warning equipment malfunctions.

ACKNOWLEDGMENTS

Action 425956

#### **ACKNOWLEDGMENTS**

Operator:	OGRID:
OXY USA INC	16696
P.O. Box 4294	Action Number:
Houston, TX 772104294	425956
	Action Type:
	[C-129] Venting and/or Flaring (C-129)

#### **ACKNOWLEDGMENTS**

V	I acknowledge that I am authorized to submit a Venting and/or Flaring (C-129) report on behalf of this operator and understand that this report can be a complete C-129 submission per 19.15.27.8 and 19.15.28.8 NMAC.
V	I acknowledge that upon submitting this application, I will be creating a new incident file (assigned to this operator) to track any C-129 forms, pursuant to 19.15.27.7 and 19.15.28.8 NMAC and understand that this submission meets the notification requirements of Paragraph (1) of Subsection G and F respectively.
V	I hereby certify the statements in this report are true and correct to the best of my knowledge and acknowledge that any false statement may be subject to civil and criminal penalties under the Oil and Gas Act.
V	I acknowledge that the acceptance of any C-129 forms by the OCD does not relieve this operator of liability should their operations have failed to adequately investigate, report, and remediate contamination that poses a threat to groundwater, surface water, human health, or the environment.
V	I acknowledge that OCD acceptance of any C-129 forms does not relieve this operator of responsibility for compliance with any other applicable federal, state, or local laws and/or regulations.
