RE: Deferral Request
Incident ID: nAPP2415825281
Ogden State #005A
Lat/Long: 32.153771, -104.260853
Project ID: 20160312-murchison-ogdenState5A

NMOCD:

McNabb Partners submits this deferral request on behalf of Murchison Oil and Gas, LLC. This document describes site assessment, soil sample analysis and deferral request for Ogden State #005A (Site).

This report includes remediation action and confirmation sampling activities conducted at the Ogden State #005A production site. The remediation of impacts outside of the lined containment was completed in accordance with the remediation work plan submitted to NMOCD and approved on 10/07/2024 for the remediation. After conducting geophysical Karst survey by a method of electric conductivity and a certified civil engineer evaluation of the Site, the remediation was completed within a lined tank battery containment excluding a 5-foot deferral zone around heavy production equipment (3 steel 500 bbls oil tanks, 2 fiberglass 500 bbls water tanks, 1 bbl fiberglass gun barrel tank and a separator on a concrete pad).

- Communications with NMOCD regarding workplan approval, geophysical Karst survey, civil engineers memorandum and all sampling notifications and are included in Appendix A through D.

1. Remediation Activities and Confirmation Sampling

Closure Criteria for the site according to Table I in 19.29.12.12 NMAC is listed below:

High Karst Potential	Chloride (mg/kg)	GRO+DRO (mg/kg)	TPH Ext. (mg/kg)	Benzene (mg/kg)	BTEX (mg/kg)
NMOCD Closure Criteria	600	--	100	10	50

Ogden State #005A
nAPP2415825281

The confirmation soil samples (5-point composite) were collected from areas not greater than 200 square feet (or less) from the excavation bases and sidewalls and analyzed for TPH, BTEX and chloride by a certified laboratory.

Remediation outside of the tank battery containment:

16 confirmation samples were collected from the base of the excavation at 1 foot below ground surface (ft bgs), (i.e., BS-01 through BS-16) and 4 confirmation samples were collected from the walls of the excavation (i.e., WS-01 through WS-04). Analytical results indicate that side wall confirmation samples BS-03 and BS-08 exceed NMOCD closure criteria for chloride concentrations listed in Table I (19.15.29 NMAC).

Following the receipt of analytical data, the respective areas BS-03 and BS-08 were excavated to a depth of 1.5 ft bgs to ensure all impacted soils were removed. On October 31, 2024, after the completion of the excavation, composite base samples BS-03 and BS-08 were recollected at a new depth, along with 12 new confirmation base samples (i.e., BS-17 through BS-24 at 1 ft bgs, and BS-25 through BS-28 at 10.5 ft bgs). 12 confirmation samples were collected from the walls of the excavation (i.e., WS-05 through WS-08 at depth of 0-1 ft bgs, and WS-09 through WS-16 at a depth of 0-10.5 ft bgs). All samples were analyzed for TPH, BTEX and chloride by a certified laboratory. Analytical results indicate that all samples met concentrations listed in Table I (19.15.29 NMAC).

Remediation within a lined tank battery containment:

The remediation within a lined tank battery containment, was conducted in agreement with NMOCD requests for a geophysical Karst review and subsequent recommendation from a certified civil engineer. On November 24th, 2024, Southwest Geophysical Consulting conducted a geophysical Karst review by a method of electrical resistivity imaging and determined that no Karst features were found within a 200-ft of an area of concern. Upon receipt of geophysical Karst review, Pettigrew Associates (civil engineers certified in a state of New Mexico) collected the samples from surfaces of existing excavations at that time to determine a soil type and stability and assessed the future area of an excavation. As a result, they recommended protecting existing structures in place and that no excavation occurs within 5 feet of load bearing structures (storage tanks and a separator on a concrete pad)

On January 17th, 2025, 30 base confirmation samples (i.e., BS-29 through BS-58) were collected from the base of the excavation at depths from 1 ft bgs to 10 ft bgs. 12 side wall confirmation samples (i.e., WS-17 through WS-28) were collected from the outside walls of the excavation. Analytical results from the laboratory indicated that several confirmation samples (i.e., BS-31, BS-34, BS-42, BS-44 through BS-49, and WS-18) exceeded the closure criteria for TPH and/or chloride concentrations. On January 22nd, 2025, the excavation was expanded vertically and horizontally, and new confirmation samples (i.e., BS-31, BS-34, BS-42, BS-44 through BS-49, BS-59, WS-18A, and WS-29) were collected from every 200 sq ft of the new excavation surfaces and side walls.

Ogden State #005A
nAPP2415825281

Analytical results indicate that all base and side wall confirmation sample meet the most stringent closure criteria for sites located in area of high Karst potential, therefore all impacted soil was removed from the tank battery containment, excluding a 5-foot deferral area.

Deferral of the remaining contamination:

On January 17th, 2025, 6 side wall composite samples (i.e., DSW-01 through DSW-06) were collected from every 200 sq ft of the inner wall excavation surface to calculate the volume of remaining contamination under the 5-foot deferral area. All inner side wall samples exceeded the closure criteria for TPH and/or chloride concentrations.

Based on NMOCD recommendation, On January 28th, 2025, 5 vertical delineation test pit sample points (i.e., TP-1 through TP-5) were installed to accurately calculate the cubic yardage of remaining contaminants. Test pit samples were collected directly next to the inner side walls of the excavation at depths between 2 and 5 ft bgs to investigate possible contamination left in place. All vertical delineation samples met the most stringent closure criteria.

- Plat 1 shows the site map of the entire Ogden State #005A well pad.
- Plats 2A & 2B show the final excavation depths with confirmation sample locations.
- Plat 3 shows the location of all deferral and delineation sample points.
- Confirmation sample results are included in Table A Summary of Analytical.
- Vertical delineation, deferral and inner side wall sample results are included in Table B Summary of Analytical.
- All laboratory reports are included in Appendix E.
- Figures 1 through 36 show the photolog of remediation activities on site

2. Deferral Request

Deferral Requests Only	
Requesting a deferral of the remediation closure due date with approval of this submission?	Yes
Have the lateral and vertical extents of the contamination been fully delineated?	Yes
Is the remaining contamination in areas immediately under or around production equipment where remediation could cause a major facility deconstruction?	Yes
What is the remaining surface area (in sq ft) that will still need to be remediated if deferral is granted?	2900
What is the remaining volume (in cubic yards) what still needs to be remediated if the deferral is granted?	373
Enter the facility ID on which this deferral should be granted	
Enter the well API on which this deferral should be granted	30-015-37264
Contamination does not cause an imminent risk to human health, the environment or groundwater.	Yes

Ogden State #005A
nAPP2415825281

Overall, 11,490 square feet of contaminated soil surface has been remediated both around and inside the tank battery containment. 1,502 cubic yards of contaminated soil has been hauled off for a proper disposal at R360 Red Bluff Landfill near Orla, TX. All waste manifests will be sent to NMOCD as a separate email due to a file size upload limitations.

McNabb Partners on behalf of Murchison Oil and Gas, LLC respectfully ask NMOCD for deferral of remediation within 5 feet of load bearing structures (i.e., 3 steel 500 bbls oil tanks, 2 fiberglass 500 bbls water tanks, 1 bbl fiberglass gun barrel tank, and a separator on a concrete pad). The contamination is fully delineated in sample points TP-1 through TP-5 at depths between 2 and 5 ft bgs and does not cause an imminent risk to human health, the environment, or ground water. The remaining affected soil is confined to the space directly beneath the production equipment, where remediation would cause significant deconstruction of the facility.

The remaining soil impacts represented by inner side wall samples DSW-01 through DSW-06 will be addressed during the facility decommissioning phase in accordance with 19.15.29.12 and 19.15.29.13 NMAC, once the site is no longer being used for oil and gas operations.

An action report detailing the final remediation and reclamation efforts and following confirmation sampling activities will be submitted to NMOCD upon the completion of the future work.

Please contact me with any questions.

Sincerely,

Dimitry Nikanorov
Project Manager

Ogden State 5A Plat 2B.pdf; Ogden State 5A Plat 2A.pdf;

Dimitry,

If the bases and side walls meet closure criteria and the contamination at depths deeper than your excavations (if there was any) that was discovered during delineation activities have been addressed, grab samples at depth are not required.

Surface area and cubic yardage of impacted soils that remain will in place when the deferral is requested are required. I would suggest that inner sidewall samples be collected along the 5' buffer area (see red highlighted area on map. Additional inner walls may be present at the site but I am unable to identify where the separator is on the map) around the tanks/separator to help define how much soil is being left in place when requesting the deferral. Additional vertical delineation may need to be performed to calculate the cubic yardage, but I believe one of the boreholes that was vertically delineated the soils right up against the tanks should have been undisturbed.

Please let me know if you require any additional information or need anything else.

Thank you,

Effective 12/1/2024: OCD has updated guidance on karst potential occurrence zones. This notice can be found at: <https://www.emnrd.nm.gov/ocd/ocd-announcements-and-notifications/> under "2024 OCD ANNOUNCEMENTS AND NOTIFICATIONS".

The Digital C-141 guidance documents can be found at <https://www.emnrd.nm.gov/ocd/ocd-announcements-and-notifications/> or <https://www.emnrd.nm.gov/ocd/ocd-forms/>.

From: Dimitry Nikanorov <Dimitry@mcnabbpartners.com>**Sent:** Friday, January 24, 2025 1:06 PM**To:** Hall, Brittany, EMNRD <Brittany.Hall@emnrd.nm.gov>**Subject:** [EXTERNAL] nAPP2415825281 Ogden State 5A - Backfilling and Sampling Confirmation

CAUTION: This email originated outside of our organization. Exercise caution prior to clicking on links or opening attachments.

Hello Brittany,

We completed the remediation at Ogden State 5a, except for the 5-foot buffer zone around the storage tanks and separator per the engineer's memorandum. All 200 sq ft composite confirmation samples show the contamination is removed to the most stringent criteria.

Murchison wanted me to double check if we should be backfilling all the areas. As we are backfilling it now, I'd like to confirm if we are clear to backfill the new 1-foot excavation west of the containment (i.e., BS-50 to BS-58). Could you let me know if grab samples at depth are required, or if composite samples from the 1-foot excavation will be sufficient? That way we can either backfill it or leave it open and have test pit grab samples at depth.

I am attaching two sample maps and a data table for your reference. Apologies for any confusion in the map because of different depths and sample clutter, I may edit it for the final submittal.

Thank you,

Dimitry Nikanorov

RE: [EXTERNAL] Ogden State 5A nAPP2415825281 - Civil Engineer Memorandum and Geophysical/Karst Review

From Hall, Brittany, EMNRD <Brittany.Hall@emnrd.nm.gov>

Date Fri 1/3/2025 1:12 PM

To Dimitry Nikanorov <Dimitry@mcnabbpartners.com>

Cc Smith, Cory, EMNRD <cory.smith@emnrd.nm.gov>; Romero, Rosa, EMNRD <RosaM.Romero@emnrd.nm.gov>; Bratcher, Michael, EMNRD <mike.bratcher@emnrd.nm.gov>; Powell, Brandon, EMNRD <Brandon.Powell@emnrd.nm.gov>; Cindy Cottrell <ccottrell@jdmii.com>; Greg Boans <gboans@jdmii.com>

Dimitry,

The Ogden State 5A Excavation Memorandum authored by Pettigrew & Associates PA and the MCNP-001-20241126 Murchison Ogden State 5A Release Karst Report indicate that the soils of the Ogden State #005A (30-015-37264) can readily dissolve and/or erode due to water flow. Due to this, OCD will not change the Table I closure criteria from the most stringent (depth to groundwater is less than 50 feet) to the least stringent closure criteria (depth to groundwater is greater than 100 feet). The release must be remediated to the most stringent closure criteria (100 mg/kg TPH, 600 mg/kg chloride, 50 mg/kg BTEX, and 10 mg/kg benzene).

OCD will consider approving a deferral for all contamination within five (5) feet of the tanks/load bearing structures. Prior to requesting a deferral, the following conditions must be met:

- The liner within the containment of the battery must be fully repaired. No holes, tears, or weakened spots can be present.
- OCD is requiring photos, including a tape measurement, of all areas that are requested for deferral to be included in the next submittal. Photos must clearly show how close the breaches in the liner were/are located to the tanks.
- OCD will not allow deferrals for areas within the recommended 3 feet buffer of any pipeline that can be taken out of service to perform remediation activities, this includes surface pipelines. Photos, including a tape measurement, of all areas located within 3 feet of pipelines that can be taken out of service during remediation activities must be included. The photos must include before remediation and after remediation.
- Include how far each point that is requested for deferral is located from tanks, lines, and other load bearing equipment. For example, CS-01 is located how many feet away from the tanks/pipelines/other structures?
- Any potential buyer of the site must be made aware of contamination that will be deferred until plugging and abandonment of the well or decommissioning of the battery, whichever comes first. The potential buyer must agree to take the liability if a change of ownership is to occur. Proof that any potential buyer has been made aware of and their acceptance of liability must be included in the next submittal.
- All the abovementioned conditions must be met prior to submission and documented in the next submittal.

All attachments included in this email must be included in the next submittal. PDF attachments included in this email are:

- Civil Engineer Lab Report Summary
- Ogden State 5A Excavation Recommendations
- Soil Sample Location Summary

- o MCNP-001-20241126 Murchison Ogden State 5A Release Karst Report
- o Ogden State 5A – Depth to Ground Water Memo

Please do not hesitate to contact me if you have any questions or require additional information. Include a copy of this correspondence in the next submittal.

Subject: [EXTERNAL] Ogden State 5A nAPP2415825281 - Civil Engineer Memorandum and Geophysical/Karst Review

CAUTION: This email originated outside of our organization. Exercise caution prior to clicking on links or opening attachments.

Hi Brittany,

On behalf of Murchison Oil & Gas, I am forwarding you the various documents related to this incident. Could you please have them added on NMOCD file?

Please see the attached documents with a stamped civil engineer report prepared by Pettigrew & Associates, and a geophysical/Karst report prepared by Southwest Geophysical Consulting. Also, lab reports and a map of soil sample locations collected by Pettigrew & Associates field techs are attached as well.

We have an information of a borehole completed approximately 900 ft west of the release, extending to 105 ft down with no groundwater encountered at any point. The lithology log is attached. That information was provided to me by Murchison from the previous consultant they have had.

Based on that information and no Karst features present, can we have a closure criteria for this incident changed to the least stringent?

Following your approval, we will start remediation of contaminants to the least stringent criteria within the tank battery following the civil engineer recommendation, in the shortest time possible.

Thank you,

Dimitry Nikanorov

RE: [EXTERNAL] nAPP2415825281 - Sampling notification variance

From Hall, Brittany, EMNRD <Brittany.Hall@emnrd.nm.gov>

Date Tue 1/21/2025 12:00 PM

To Dmitry Nikanorov <Dimitry@mcnabbpartners.com>

Cc Cindy Cottrell <ccottrell@jdmii.com>

Dimitry,

The C-141N (application ID: 42277) states that samples will be collected tomorrow (Tuesday, January 22, 2025). If this is accurate, the variance from 19.15.29 D. (1)(a) NMAC, which states "The responsible party must verbally notify the appropriate division district office two business days prior to conducting final sampling. If the division district office does not respond to the notice within the two business days, the responsible party may proceed with final sampling. The responsible party may request a variance from this requirement upon a showing of good cause as determined by the division.", is approved.

Please be advised that ALL future variance requests must comply with 19.15.29.14 A. (1 and 2) NMAC which states "A responsible party may file a written request for a variance from any requirement of 19.15.29 NMAC with the appropriate division district office. The variance request must include: **(1)** a detailed statement explaining the need for a variance; and **(2)** a detailed written demonstration that the variance will provide equal or better protection of fresh water, public health and the environment."

If sampling is to occur on Thursday at 8AM as your email states, please resubmit a corrected C-141N and a variance request complaint with 19.15.29.14 A. (1 and 2) NMAC.

Please include a copy of this email correspondence with the next submittal.

Subject: [EXTERNAL] nAPP2415825281 - Sampling notification variance

CAUTION: This email originated outside of our organization. Exercise caution prior to clicking on links or opening attachments.

Hello Brittany,

I have just submitted a notification for the final sampling event on Ogden State 5A for this Thursday on 08:00am. Since that is earlier than 48 hours from now, I would like to request a variance. Please let me know if that is acceptable, I will let the SLO know as well.

Thank you,

Dimitry Nikanorov

Ogden 5A Remediation Plan approved by OCD. Sending this to SLO and will forward their approval when we receive it.

From: OCDOnline@state.nm.us <OCDOnline@state.nm.us>

Sent: Monday, October 7, 2024 3:46 PM

To: Cindy Cottrell <ccottrell@jdmii.com>

Subject: The Oil Conservation Division (OCD) has approved the application, Application ID: 387344

To whom it may concern (c/o Cindy Cottrell for Murchison Oil and Gas, LLC),

The OCD has approved the submitted *Application for administrative approval of a release notification and corrective action* (C-141), for incident ID (n#) nAPP2415825281, with the following conditions:

- **Remediation plan conditionally approved.**
- **Excavation closure/final samples must meet the most stringent closure criteria (600 mg/kg chloride, 100 mg/kg TPH, 50 mg/kg BTEX, and 10 mg/kg benzene). The horizontal and vertical extents must be extended past the proposed remediation extents (horizontally and vertically) until the most stringent closure criteria are met.**
- **OCD assumes that H-3 (0.5') (H244989-10), H-3 (2') (H244989-11), and H-3 (4') (H244989-12) are mislabeled on the map and should read "H-4 (0.5') (H244989-10), H-4 (2') (H244989-11), and H-4 (4') (H244989-12)". If this is incorrect and H-4 (0.5') (H244989-10), H-4 (2') (H244989-11), and H-4 (4') (H244989-12) were not included on the map, the contamination at H-4 (0.5') (H244989-10) must be addressed during remediation activities.**
- **Be advised that OCD will not approved a "closure/deferral report" as specified in the report. A remediation closure request will not be approved if any contamination is left in place. A deferral will not be approved if the contamination is not fully delineated. Please review the Digital C-141 submission Dec 1, 2023 Guidance document posted on the EMRND Website prior to submitting any C-141s. The guidance documents can be found at <https://www.emnrd.nm.gov/ocd/ocd-announcements-and-notifications/> or <https://www.emnrd.nm.gov/ocd/ocd-forms/>.**
- **Base and side wall confirmation samples must collected as five (5) point composite samples representative an area not larger than 200 square feet.**
- **Sampling Notification pursuant to 19.15.29.12.D.(1).(a) NMAC must be completed prior to the collection of confirmation/final sampling.**
- **Additional liner removal may be warranted if the extent of the contamination under the liner cannot be visualized/delineated.**

- **Include waste manifests in the next report.**
- **Submit a complete and accurate report through the OCD Permitting website by 12/7/2024.**

The signed C-141 can be found in the OCD Online: Imaging under the incident ID (n#).

If you have any questions regarding this application, please contact me.

Thank you,

Brittany Hall

Cindy

Documentation of proposed remediation for the subject incident was received from your office on October 3, 2024. The NMSLO Environmental Compliance Office (ECO) has reviewed the plan, and based on the information provided in the document received from your office, ECO has approved the remediation plan with the following conditions:

1. NMOCD supports NMOCD's conditions of approval.
2. For all workplans and reports an applicability statement for compliance with the Cultural Properties Protection Rule is required and a statement for working in a biologically sensitive area. Should remediation extend into areas previously undisturbed, compliance with the CPP Rule is required. Please continue to mention that biological survey was completed with no findings as the project progresses. We need to see that all aspects of working on State Trust Land are considered each step of the way.

Please confirm that you understand and agree to the conditions of approval. Submit the remediation plan to eco@nmslo.gov.

Lessee and/or their contractor are responsible for ensuring the project manager and field personnel performing the work follow the approved work plan.

Civil Engineer Evaluation

McNabb Partners, LLC
Hobbs • Carlsbad • Midland

Memorandum

Project Name: Ogden State #5A – Site Remediation
Subject: Civil Excavation Recommendations
Location: Lat: 32° 9'13.40"N Long: 104°15'38.26"W
Date: 12/21/2024

To Whom it may concern,

On December 5, 2024, a representative of Pettigrew & Associates conducted a site visit of the existing facility to visually assess and sample the existing soil at/near the containment area. During the site visit, 5 soil samples were collected from the site at various locations. The collected samples were taken to our Lab for Sieve analysis and Atterberg limits. These results of these tests are summarized on the attached map. The full reports will be available upon request. The observed soils predominantly consisted of Gypsum which contains silty sand with inorganic clays. Larger aggregates were observed in the collected samples but are believed to be broken off of the existing soil shelf. The existing Gypsum can be eroded by concentrated water flow. However, during the visual observation there was not any apparent areas where erosion was visible.

It is understood that a karst survey has been completed for the site and no karst was found to be within the project area. The Karst survey will be provided in conjunction with this letter.

Excavation Recommendations:

- For excavation within the containment area, it is recommended to protect existing structures in place and that no excavation occurs within 5 feet of load bearing structures.
- Existing pipe/conduits shall be protected in place. It may not be feasible to excavate around these areas without compromising the soil stability. Therefore it is recommended that no excavations occur within 3 feet of known underground utilities.
- Temporary excavations deeper than 1' must be sloped at 3H:1V.
- Excavations deeper than 20' will require a site specific plan to be stamped/sealed by an Engineer. Due to space limitations, shoring or benching systems may be required.
- During all earthwork operations, it is recommended to provide erosion control during construction. Due to the erosive nature of the existing Gypsum, significant rain events can have detrimental effects on the soil strength. If a significant rain event occurs during excavation operations, it is recommended to stop work and assess the site to confirm that no areas have been compromised by erosion.

1.0 INTRODUCTION

This report was commissioned by McNabb Partners LLC (hereinafter referred to as "the client"), on November 26, 2024, for the purpose of conducting an environmental karst study within an area encompassing the Murchison Ogden State 5A Release site (hereinafter termed "MO5A") centered at N 32.153907° W 104.260991°

1.1 Goals of this Study

The goals of this study are to conduct a surface karst inventory and provide the client with the location and description of any surface karst features located within 61 meters (200 feet) of the spill delineation boundary as defined by 19.15.29.12 NMAC and to determine whether stable ground exists within the spill boundary of the Murchison Ogden State 5A Release using electrical resistivity imaging as defined by 19.15.2 NMAC Definitions^[1,2].

1.2 Summary of Findings

- **No surface karst features exist within the 200-foot (61-meter) zone surrounding the spill delineation boundary.**
- **No anomalies consistent with air- or water-filled voids were found within the MO5A resistivity survey area, indicating the zone beneath the geophysical survey is not subject to collapse.**
- **Well-layered stratigraphy is interpreted to exist beneath the area where the geophysical survey was conducted indicating stable ground.**

1.3 Affected Environment

The MO5A project site is located in evaporite karst terrain, a landform that is characterized by underground drainage through solutionally enlarged conduits. Evaporite karst terrain may contain sinkholes, sinking streams, caves, and springs. Sinkholes leading to underground drainages and voids are common. These karst features, as well as occasional fissures and discontinuities in the bedrock, provide the primary sources for rapid recharge of the groundwater aquifers of the region. Additionally, karst may develop by hypogene processes involving dissolution by upwelling fluids from depth independent of recharge from the overlying or immediately adjacent surface. Hypogene karst systems may not be connected to the surface and can remain undiscovered unless encountered during drilling or excavation.

Karst features are delicate resources that are often of geological, hydrological, biological, and archeological importance, and should be protected. The four primary concerns in these types of terrain are environmental issues, worker safety, equipment damage, and infrastructure integrity.

The Bureau of Land Management (BLM) categorizes all areas within the Carlsbad Field Office (CFO) zone of responsibility as having either low, medium, high, or critical cave potential based on geology, occurrence of known caves, density of karst features, and potential impacts to freshwater aquifers^[3]. These designations are also recognized by the New Mexico State Land Office (NMSLO). This project occurs within a **HIGH** karst occurrence zone^[4] (**Figure 1**).

Figure 1: Karst occurrence zone overview. Background image credit: Google Earth. Image date: August 21, 2024. Image datum: WGS-84.

A high karst occurrence zone is defined as an area in known soluble rock types that contains a high frequency of significant caves and karst features such as sinkholes, bedrock fractures that provide rapid recharge of karst aquifers, and springs that provide riparian habitat^[3].

Each location within a CKOZ or HKOZ must be assessed on an individual basis to determine the existence of surface karst features and the possibility of sub-surface karst development.

1.4 Limitations of Report

This report should be read in full. No responsibility is accepted for the use of any part of this report in any other context or for any other purpose or by third parties. This report does not purport to give legal advice. Legal advice can only be given by qualified legal practitioners.

This report has been prepared for the use of McNabb Partners LLC in accordance with generally accepted consulting practices. Every effort has been made to ensure the information in this report is accurate as of the time of its writing. This report has not been prepared for use by parties other than the client, their contracting party, and their respective consulting advisors. It may not contain sufficient information for the purposes of other parties or for other uses.

This report was prepared upon completion of the associated fieldwork using a standard template prepared by Southwest Geophysical Consulting and is based on information collected prior to fieldwork, conditions encountered on site, and data collected during the fieldwork and reviewed at the time of preparation. Southwest Geophysical Consulting disclaims responsibility for any changes that might have occurred at the site after this time. The interpreted results, locations, and depths noted in this report (if applicable) should be taken as an interpretation only and no decision should be based solely on this information. Physical verification of aerial imagery analysis results in the field should be conducted prior to using this information for remediation planning. Physical verification of geophysical results using geotechnical methods should be conducted.

To the best of our knowledge, information contained in this report is accurate at the date of issue. Due to the nature of karst terrain the information in this report shall not be used beyond three years past the date of the field work provided in section **2.3.1 Surface Karst Inventory**. Large weather events can shorten this time period as areas subject to karst development can rapidly form new features subsequent to these events.

2.0 LOCATION AND DESCRIPTION OF STUDY AREA

2.1 Description of Site

The site is located 29.5 kilometers (18.3 miles) south of Carlsbad, New Mexico, south of the Black River, west of John D Forehand Road, and north of Prickly Pear Road. The study area is located within the SE ¼ section of section 2 of NM T25S R26E^[5] (**Figure 1** and **Figure 2**). The region has flat to rolling terrain with karstification occurring in the gypsite soils and underlying gypsum and dolomite bedrock^[6] (see section **2.2 Local Geology Summary** for further information). The climate in this area of southeast New Mexico is semi-arid with an average annual precipitation of approximately 13 inches, of which about two-thirds falls as rain during summer thunderstorms from June to October. Summers are hot and sunny while winters are generally mild, with an average maximum temperature of 96°F in July and an average minimum temperature of 28°F in January^[7]. This area is within the Chihuahuan Desert Thornscrub as defined by the Southwestern Regional ReGAP Vegetation map^[8] and the vegetation consists mostly of areas of blue grama, nine-awned pappus grass, burro grass and low scrub including yucca. The entire survey site is located within a BLM-CFO designated HKOZ^[4] (**Figure 1**), and within NMSLO managed land^[9] (**Figure 2**).

Figure 2: Land ownership and PLSS overview. Background image credit: Google Earth. Image date: January 27, 2023. Image datum: WGS-84.

2.2 Local Geology Summary

The site for the MO5A survey is located at an elevation of 1,029 meters (3,245 feet), $\pm$ 4 meters (13.1 feet), and is located within a region entirely underlain by the Permian Salado (Psl) and Castile (Pc) Formations. The area is mantled by thin gypsiferous soils (gypsite) and Quaternary alluvium (Qal)^[10] up to 5 meters in depth (**Figure 3**).

The Salado Formation (Psl) is a layer of extremely soluble halite which can readily dissolve to create caves, sinkholes, and other karst features; however, due to its extremely soluble nature, only non-soluble silt and sand remain from the dissolution of this layer at the surface^[11].

The Castile Formation is mostly organic-rich calcite interlayered with a white to light grey anhydrite and dolomite, with occasional lenses of halite. Near the surface the Castile is heavily brecciated, allowing meteoric waters to quickly dissolve the anhydrite forming caves and other karst features^[12].

Figure 3: Geology overview. Geology map credit: The Digital Geologic Map of New Mexico in ARC/INFO Format. Background image credit: Google Earth. Image date: January 27, 2023. Image datum: WGS-84.

The survey area is covered by the easily accessible Geologic Map of New Mexico (2003) at 1:500,000 scale^[10] and the Digital Geologic Map of New Mexico in ARC/INFO Format^[13].

2.3 Description of Survey

2.3.1 Surface Karst Inventory

Southwest Geophysical Consulting, in partnership with SWCA Environmental Consultants, provides aerial karst surveys using drones that are flown by qualified, FAA licensed drone pilots and that meet the stringent Bureau of Land Management – Carlsbad Field Office requirements for both pedestrian and aerial karst surveys.

Aerial karst surveys are conducted at low elevation following a preplanned raster pattern flightpath designed for the purpose of generating at least 75% imagery overlap. The collected high-resolution, georeferenced imagery is stitched together to develop orthomosaic imagery which is further developed into a digital elevation model (DEM); the DEM is then processed into a local relief model (LRM) (**Figure 4**). This LRM is color coded to enhance differences in elevation of as little as five centimeters. The orthoimagery, DEM, and LRM are uploaded to a server where they are analyzed by a highly qualified karst geologist. Finally, the data is reviewed by a senior karst geologist for quality assurance and downloaded into a table for inclusion in a written report^[14].

Figure 4: Surface survey overview. Background image credit: Google Earth. Image date: January 27, 2023. Datum: WGS-84.

Resolution of the orthoimagery is clear enough that features as small as 10 centimeters can be positively identified in most circumstances. Occasionally there are ambiguous features identified during an aerial survey that will need to be checked in the field if they are impacted by the proposed remediation efforts. Specifically, it is difficult to tell the difference between solution tubes, abandoned uncased well bores, and some burrows in drone imagery.

The imagery for this study was collected via aerial survey by Pat Lagodney of SWCA and Garrett Jorgensen Olague of Southwest Geophysical Consulting between October 1, 2023, and December 20, 2024. Surface karst features may have developed after these dates and will not be noted in this report. Imagery analysis was completed by Garrett Jorgensen Olague of Southwest Geophysical Consulting on December 23, 2024.

Prior to conducting the aerial karst survey, a surface karst desk study was performed by Southwest Geophysical Consulting within 305 meters (1,000 feet) of the spill delineation boundary. The study was performed using satellite and aerial imagery from Google Earth Pro dated January 27, 2023 (please note features less than one meter in diameter are generally not visible using this method); the Southwest Geophysical Cave and Karst Database dated November 22, 2024^[15]; the Black River Village, NM, 1:24,000 quad, 1979, USGS topographic map; and the latest lidar imagery from CalTopo.com. Please note that we use older topographic maps because newer maps have had caves removed from them. These searches and queries returned no results within the survey boundary.

2.3.2 Geophysical Survey

For this survey, an Advanced Geosciences Inc. (AGI) SuperSting™ Wifi R8 with a multi-electrode switchbox, a 42-electrode array of 40-centimeter-long electrodes, and a tablet controller were used to image the subsurface. This survey consisted of two resistivity lines in a dipole-dipole configuration; MO5A01 is laid out west to east and MO5A02 is laid out south to north. Both lines consisted of 42 electrodes at 5-meter spacing, resulting in 205-meter-long arrays. (**Figure 5**, **Table 1**, and **APPENDIX 8.2**). A preconfigured command file was used to run the data collection (DiDi42). This electrode configuration provided a depth of investigation of 41 meters (135 feet) and a resolution of 2.5 to 3.0 meters (8.2 to 9.8 feet) within the first 5 to 8 meters (16 to 26 feet) from the surface. A Leica GS18 GPS was used to record electrode locations and elevations.

Figure 5: Geophysical survey overview. Two survey lines were conducted with 42 electrodes each at 5-meter spacing (yellow dots denoted with blue numbers). Background image credit: Google Earth. Image date: January 27, 2023. Image datum: WGS-84.

APPENDIX 8.2 provides a detailed list of each electrode number, location in latitude/longitude (decimal degree format), and elevation in meters. EarthImager™ 2D software was used to download and process the data and to provide the model used to make our interpretations (**Table 2**). The design of the survey and the orientation of each of the lines provides the information necessary to make the determination of “stable ground” at this site.

A typical starting model was used for the data processing due to the two-layer model of the geology in the area; specifically, generally high-resistivity gypsum and dolomite at the surface and low-resistivity saturated gypsum and dolomite bedrock at depth. The starting model used was “average apparent resistivity” and a default inversion setting of “surface,” with a minimum apparent resistivity set to 0.1 Ohm-meters (Ohm-m or Ω -m) and a max apparent resistivity set to 100,000 Ω -m (**Table 2**).

All field work, including setup, stow, and travel, was completed by Garrett Jorgensen Olague, Britt Bommer, and Steven Kesler on December 16, 2024.

NOTE: Due to on-going work on the pad, and the proximity of the release to the tank battery, we were limited to the location that we could set up the resistivity array.

3.0 RESULTS

3.1 Surface Karst Survey

The desk study and surface karst survey showed no existing surface karst features within the 200-foot (61-meter)^[2] or 200-meter^[4] karst survey boundaries. No springs exist within the 1,000-foot (305-meter)^[1] survey boundary.

3.2 Geophysical Survey

Electrical resistivity tomography forms images of the subsurface by causing a current to flow through the rock and soil and then measuring the resistance of these materials as the current flows through them. This measurement is taken many times and the resulting data, once processed, is used to produce a model of the subsurface (**Figure 6**). This model is produced using "non-unique" solutions, which means that there are many models and interpretations which will satisfy the data. Using experience and knowledge of the local geology, a high-confidence model can be established and used to develop an accurate understanding of what lies below the surface. This survey was conducted with the express purpose of locating subsurface voids and does not purport to find paleokarst (old, non-active karst features that have been filled in with sand and sediment) or nascent karst features below the resolution limit of the survey.

The results of this study indicate a well-layered geologic system with resistivities between 10.5 and 380 Ohm-m with occasional areas of up to 810 Ohm-m (**Figure 6**). Please keep in mind when viewing the 2D inverted resistivity sections that color maps can be widely different for each view. Always check the color map located on the right side of the image when viewing the 2D images to ensure you understand the range of resistivities presented. Distances along the top and depths along the left side are in meters. The color map along the right side is in Ohm-m. Due to the nature of the survey, shallower zones have higher resolution between electrodes than deeper zones; therefore, small features at depth will not be visible.

One area of higher-than-average resistivity exists under line MO5A02. Areas of lower-than-average resistivity (10.5 to 25.0 Ohm-m) exist both at the surface and at depth within the survey area (**Figure 6**).

Figure 6: 2D inverted resistivity sections. Reds and oranges indicate higher resistivity values. Yellows and greens are medium resistivity values. Blues are low resistivity values. Please note that the color scale is relative, and that even the highest values in these sections are lower than what is typically seen in the region.

4.0 DISCUSSION

No surface karst features and no anomalies consistent with large (greater than 2-meter diameter) air- or water-filled subsurface voids are found within the MO5A survey area. Small solutionally enlarged voids or fractures at or near the resolution limit of the survey (1.5 – 2.0 meters) may be present. The higher-than-average resistivity area located underneath line MO5A02 is interpreted to be either a more resistant sandstone layer, possibly an old river channel, or a lens of dry halite. Other slightly higher-than-average resistivity areas less than 10 meters beneath the surface are interpreted as dry caliche or gypsite soils. Due to their low resistivity values when compared with significant subsurface voids, these features should not be a concern during remediation efforts. Areas of moderate resistivity (yellows, and greens) near the surface are interpreted as dry caliche soils and gypsum bedrock of the Castile Formation^[16] (**Figure 6** and **Figure 7**).

Low resistivity areas between 5 – 25 Ohm-m may either represent fluid from the brine release, surface to subsurface hydrologic pathways, or a layer of either clays and halite lenses or moist or saturated layers within the Castile Formation. Specifically, the vertical low-resistivity areas on line MO5A02 between electrodes 12 and 27 may represent surface recharge.

Well-layered stratigraphy that is ordered and flat-lying is seen throughout the resistivity sections. No features such as chaotic layering or concave structures are seen within either resistivity line. This indicates that the ground is stable and has not undergone extensive dissolution or karstification.

Please remember that these are interpretations made from knowledge of the local subsurface materials and experience. They remain interpretations until verified by geotechnical methods.

Within karst terrains like the project site, small air- or sediment-filled voids and/or brecciated zones and solutionally enlarged fractures that are below the resolution limit of the survey (2.5 – 3.0 meters) may exist; these may be encountered during excavation, and if so, should be evaluated by a karst specialist prior to continued work. Employing a BLM-CFO approved karst monitor on site during activities in this area should be considered.

No surface karst features are located within 200 feet (61 meters) of the MO5A spill delineation boundary^[2].

No anomalies consistent with air- or water-filled voids were found within the MO5A resistivity survey area, indicating the zone beneath the geophysical survey is not subject to collapse.

Well-layered stratigraphy is interpreted to exist beneath the area of the geophysical survey, indicating stable ground.

Figure 7: Data overlay. Colored trapezoids are 2D inverted resistivity lines. Background image credit: Google Earth. Image date: January 27, 2023.

5.0 SUMMARY

- **The MO5A survey contains no surface karst features within 200 feet (61 meters) of the spill delineation boundary.**
- **No shallow anomalies interpreted as large voids or related karst features that would present a danger to equipment operators are located within the survey area.**
- Intercepting a void during remediation is unlikely, but still possible. Small voids or solutionally enlarged fractures below the resolution limit of the survey may be encountered.
- **Well-layered stratigraphy is interpreted to exist beneath the area where the geophysical survey was conducted indicating stable ground.**
- When conducting any remediation activities in this area, employing a BLM-CFO approved karst monitor on site should be considered.

6.0 Disclosure Statement

High karst occurrence zones are prone to rapid karst formation and warrants careful planning and engineering to mitigate karst-forming processes that could be accelerated by removal of surface cover or the vibrations associated with heavy equipment used in the remediation process.

Mitigation measures for any karst features revealed during excavation shall be approved by the Bureau of Land Management – Carlsbad Field Office and follow the Natural Resources Conservation Service Conservation Practice Standard for Karst Sinkhole Treatment, Code 527, or the Bureau of Land Management Cave and Karst Management Handbook, H-8380-1.

Vigilance during remediation activities is paramount. If voids are encountered during excavation, contact the Bureau of Land Management Karst Division at (575) 234-5972, the New Mexico State Land Office Surface Resources Division at (505) 827-5768, or a BLM-CFO-approved karst contractor and request an on-site investigation from a karst expert if one is not already on site. A karst consultant can generally be available in Eddy County within five hours.

Approved karst monitors should have karst feature identification training, at least two years of supervised experience identifying karst features, wilderness first aid training, SRT training, confined space training, gas monitor training, and a minimum of SPAR cave rescue training through NCRC. They should have with them the proper gear and be prepared both physically and mentally to enter a collapse feature within minutes to perform a rescue if needed. Monitoring services with qualified karst monitors, as well as cave surveys and geophysical surveys, are available from Southwest Geophysical Consulting.

Under no circumstances should an untrained, inexperienced person enter a cave, pit, sinkhole, or collapse feature. All field employees of Southwest Geophysical Consulting have extensive caving experience and the ability to determine whether entry into a karst feature is safe or presents a hazard. In the event it is necessary to enter a karst feature, Southwest Geophysical Consulting can provide these services on request.

Cave and karst resource inventory reports, karst feature investigations, and geophysical reports commissioned at the request of the land manager should be submitted to:

BLM-CFO: blm_nm_karst@blm.gov

Cave and karst resource inventory reports for the NMSLO should be submitted to the respective project manager.

8.0 APPENDICES

8.1 Glossary of Terms

ACEC	Area of Critical Environmental Concern
AGI	Advanced Geosciences Inc.
BLM-CFO	Bureau of Land Management - Carlsbad Field Office
brecciated	Fractured rock caused by faulting or collapse.
caprock-collapse sinkhole	Collapse of roof-spanning rock into a cave or void.
cave	Natural opening at the surface large enough for a person to enter.
cover-collapse sinkhole	Collapse of roof-spanning soil or clay ground cover into a subsurface void.
ERI	Electrical Resistivity Imaging
GPS	Global Positioning System
grike	A solutionally enlarged, vertical, or sub-vertical joint or fracture.
(H)	High confidence modifier for a PKF. This is typically reserved for a feature that is definitely karst but has not been confirmed in the field.
HKOZ	High Karst Occurrence Zone
InSAR	Interferometric Synthetic Aperture Radar. A method by which radar signals from satellites are processed to determine the amount and rate of subsidence of an area as well as whether the area is actively subsiding.
karst	A landscape containing solutional features such as caves, sinkholes, swallets, and springs.
(L)	Low confidence modifier for a PKF. This is typically a feature that cannot be ruled out as karst but is most likely NOT karst related. This modifier may also be used for pseudokarst features.
LED	Locally enclosed depression. A natural depression on the surface that collects rainwater. Some contain swallets and/or caves, others do not.
(M)	Medium confidence modifier for PKF. This is an ambiguous feature that can't be positively identified as karst without a field visit (e.g., burrows, abandoned unlined wells, solution tubes, pseudokarst).
MKOZ	Medium Karst Occurrence Zone
NCRC	National Cave Rescue Commission
NKF	Non-karst feature. Used for features originally identified as PKF that have been subsequently identified in the field as non-karst related. This term may also be used for pseudokarst features.
NMSLO	New Mexico State Land Office
Ohm-m	Ohm-meter, a unit of measurement for resistivity. Sometimes abbreviated Ω -m.

paleokarst	Previously formed karst features that have been filled in by erosion and/or deposition of minerals.
Pat	Permian Artesia Group
Pc	Permian Capitan Formation
Pcs	Permian Castile Formation
Pdl	Permian Dewey Lake Formation
PKF	Possible karst feature. This term is reserved for features identified in satellite or aerial imagery that have NOT been visited in the field. Further modifiers include (H) for high confidence, (M) for medium confidence, and (L) for low confidence. These confidence levels are based on field experience.
PLSS	Public Land Survey System
Pqg	Permian Queen/Greyburg Formation
Pru	Permian Rustler Formation
pseudokarst	Karst-like features (sinkholes, conduits, voids etc.) that are not formed by dissolution. These types of features include soil piping, lava tubes, and some cover-collapse and suffosion sinkholes.
Psl	Permian Salado Formation
Psr	Permian Seven Rivers Formation
Pt	Permian Tansill Formation
Py	Permian Yates Formation
Qal	Quaternary alluvium
Qe	Quaternary eolian deposits
Qp	Quaternary piedmont deposits
Qpl	Quaternary playa lake deposits
RKF	Recognized karst feature. This term is reserved for karst features that have been physically verified in the field.
SKF	Surface Karst Feature
SPAR	Small Party Assisted Rescue
suffosion sinkhole	Raveling of soil into a pre-existing void or fracture.
swallet	A natural opening in the surface, too small for a person, that drains water to an aquifer. Some are "open," meaning a void can be seen below; some are "closed," meaning they are full of sediment.
SWG	Southwest Geophysical Consulting, LLC
UTM	Universal Transverse Mercator (projected coordinates)
(V)	Field verified modifier for a PKF. This indicates that the feature has been visited by a qualified karst professional in the field and fully identified
WGS	World Geodetic System (geographic coordinates)

8.2 Electrode Data

Please see accompanying data files in **MO5A_ERI_Points.xlsx** and **MO5A_ERI_Points.kmz** within file **MCNP-001-20241126_MO5A_Data_Files.kmz** for detailed information on each electrode location.

Table 1: Survey Line Data Table. The .kmz file contains all the points for the survey line listed in the file name. These data are available in the accompanying files **MO5A_ERI_Points.xlsx** and **MCNP-001-20241126_MO5A_Data_Files.kmz**.

File Name:	Completed By:	Date:
MO5A01.kmz	Garrett Jorgensen Olague – Senior Field Geologist Britt Bommer – Field Geologist Steven Kesler – Field Geologist	12/16/2024
MO5A02.kmz		

Raw data files (.stg files for EarthImager™ 2D) and processed data (.trn files, terrain files for surface correction in EarthImager™ 2D and .out files, the processed .stg files) are available upon request.

Table 2: Software Information and Settings

Software Name:	EarthImager™ 2D
Version:	2.4.4.649
Starting Model:	Average Apparent Resistivity
Default Inversion Settings:	Surface
Changes to Default Inversion Settings:	Max Apparent Resistivity = 100 kΩ-m Min Apparent Resistivity = 0.1 Ω-m

CERTIFICATE OF AUTHOR

I, David D. Decker, a Licensed Professional Geologist and a Certified Professional Geologist, do certify that:

- I am currently employed as a consulting geologist in the specialty of caves and karst with an office address of 5117 Fairfax Dr. NW, Albuquerque, NM, USA, 87114.
- I graduated with a Master of Science in Applied Physics with a specialization in Sensor Systems from the Naval Post Graduate School in Monterey, California, in 2003, and a Doctor of Philosophy in Earth and Planetary Sciences from the University of New Mexico, Albuquerque, New Mexico, in 2018.
- I am a Licensed Professional Geologist in the State of Texas, USA (PG-15242) and have been since 2021. I am a Certified Professional Geologist through the American Institute of Professional Geologists (CPG-12123) and have been since 2021.
- I have been employed as a geologist continuously since 2016. I was previously employed as a Fire Controlman, Naval Flight Officer, and Aerospace Engineering Duty Officer in the U.S. Navy and operated, maintained, and installed various sensor systems including magnetic, electromagnetic, radar, communications, and acoustic systems in various capacities from 1986 through 2010.
- I have been involved in various aspects of cave and karst studies continuously since 1985, including exploration, mapping, and scientific studies.
- I have read the definition of “qualified karst professional” set out in the ASTM Standard Practice for Preliminary Karst Terrain Assessment for Site Development (ASTM E-1527). I meet the definition of “qualified professional” for the purposes of this standard.
- I am responsible for the content, compilation, and editing of all sections of report number MCNP-001-20241126 entitled, “Environmental Karst Study Report, Murchison Ogden State 5A Release, Eddy County, New Mexico.” I or a duly authorized and qualified representative of Southwest Geophysical Consulting, LLC, have personally visited this site and/or reviewed the aerial imagery on the date or dates mentioned in section **2.3 Description of Survey**.

- I have no prior involvement nor monetary interest in the described property or project, save for my fee for conducting this investigation and providing the report.

Dated in Albuquerque, New Mexico, December 24, 2024.

RE: OGDEN STATE 5A

Enclosed are the results of analyses for samples received by the laboratory on 01/28/25 11:31.

Cardinal Laboratories is accredited through Texas NELAP under certificate number TX-C24-00112. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Celey D. Keene". The signature is written in a cursive, flowing style.

RE: OGDEN STATE 5A

Enclosed are the results of analyses for samples received by the laboratory on 01/22/25 15:14.

Cardinal Laboratories is accredited through Texas NELAP under certificate number TX-C24-00112. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Celey D. Keene". The signature is written in a cursive, flowing style.

Celey D. Keene

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence and any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damages, including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.

RE: OGDEN STATE 5A

Enclosed are the results of analyses for samples received by the laboratory on 01/17/25 15:29.

Cardinal Laboratories is accredited through Texas NELAP under certificate number TX-C24-00112. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Celey D. Keene". The signature is fluid and cursive, with the first name "Celey" and last name "Keene" clearly distinguishable.

Celey D. Keene

Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence and any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damages, including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.

RE: OGDEN STATE 5A

Enclosed are the results of analyses for samples received by the laboratory on 01/17/25 15:29.

Cardinal Laboratories is accredited through Texas NELAP under certificate number TX-C24-00112. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at

www.tceq.texas.gov/field/ga/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Total Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Cardinal Laboratories is accredited through the State of New Mexico Environment Department for:

Method SM 9223-B	Total Coliform and E. coli (Colilert MMO-MUG)
Method EPA 524.2	Regulated VOCs and Total Trihalomethanes (TTHM)
Method EPA 552.2	Total Haloacetic Acids (HAA-5)

Accreditation applies to public drinking water matrices for State of Colorado and New Mexico.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Celey D. Keene

Lab Director/Quality Manager

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence or any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damage including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence or any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damage including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence or any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damage including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.

RE: OGDEN STATE 5A

Enclosed are the results of analyses for samples received by the laboratory on 11/13/24 15:40.

Cardinal Laboratories is accredited through Texas NELAP under certificate number TX-C24-00112. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Celey D. Keene". The signature is written in a cursive style with a large, stylized 'C' and 'K'.

RE: OGDEN STATE 5A

Enclosed are the results of analyses for samples received by the laboratory on 11/01/24 11:14.

Cardinal Laboratories is accredited through Texas NELAP under certificate number TX-C24-00112. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Celey D. Keene". The signature is written in a cursive style with a large, stylized 'C' and 'K'.

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence and any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damages, including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.

RE: OGDEN STATE 5A

Enclosed are the results of analyses for samples received by the laboratory on 10/23/24 16:40.

Cardinal Laboratories is accredited through Texas NELAP under certificate number TX-C24-00112. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Mike Snyder". The signature is fluid and cursive, with the first name "Mike" and last name "Snyder" clearly distinguishable.

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence and any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damages, including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.

RE: OGDEN STATE 5A

Enclosed are the results of analyses for samples received by the laboratory on 08/26/24 16:33.

Cardinal Laboratories is accredited through Texas NELAP under certificate number TX-C24-00112. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Celey D. Keene". The signature is written in a cursive, flowing style.

Celey D. Keene
Lab Director/Quality Manager

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence and any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damages, including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.

Notes and Definitions

S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
GC-NC1	8260 confirmation analysis was performed; initial GC results were not supported by GC/MS analysis and are biased high with interfering compounds.
GC-NC	8260 confirmation analysis was performed; initial GC results were not supported by GC/MS analysis and are reported as ND.
ND	Analyte NOT DETECTED at or above the reporting limit
RPD	Relative Percent Difference
**	Samples not received at proper temperature of 6°C or below.
***	Insufficient time to reach temperature.
-	Chloride by SM4500Cl-B does not require samples be received at or below 6°C Samples reported on an as received basis (wet) unless otherwise noted on report

New Buyer's Approval of Liability

McNabb Partners, LLC
Hobbs • Carlsbad • Midland

February 5, 2025

EMNRD - Oil Conservation Division

Attn: Brittany Hall

1000 Rio Brazos Road

Aztec, NM 87110

Subject: Ogden State #5A, Incident ID: nAPP2415825281

Dear Ms. Hall,

Murchison Oil and Gas, LLC ("Murchison") is currently applying for a deferral on the Ogden State #5A (Incident ID: nAPP2415825281) ("Ogden State #5A") and one of the conditions of approval is:

"Any potential buyer of the site must be made aware of contamination that will be deferred until plugging and abandonment of the well or decommissioning of the battery, whichever comes first. The potential buyer must agree to take the liability if a change of ownership is to occur. Proof that any potential buyer has been made aware of and their acceptance of liability must be included in the next submittal."

Ridge Runner Resources is aware Murchison is pursuing a deferral on the Ogden State #5A. Ridge Runner Resources is aware of their acceptance of liability if a change of ownership is to occur.

Murchison and Ridge Runner Resources are currently under a Purchase and Sale Agreement dated April 20, 2024 ("PSA") and nothing in this letter will amend the terms of the PSA.

Murchison and Ridge Runner Resources appreciate the NMOCD's time and attention to this matter.

Sincerely,

Murchison Oil and Gas, LLC
Sana Hines, CFO

Ridge Runner Resources
Brian Cassens, Co-CEO

WASTE GENERATION PROCESS: ☐ DRILLING ☐ COMPLETION ☒ PRODUCTION ☐ GATHERING LINES

NON-EXEMPT E&P Waste/Service Identification and Amount

All non-exempt E&P waste must be analyzed and be below threshold limits for toxicity (TCPL), ignitability, corrosivity and reactivity

Non-Exempt Other _____ *please select from Non-Exempt Waste List on back

QUANTITY: _____ B-BARRELS _____ Y-YARDS _____ E-EACH

I hereby certify that the above listed material(s), is (are) not hazardous waste as defined by 40 CFR Part 261 or any applicable state law. That each waste has been properly described, classified and packaged, and is in proper condition for transportation according to applicable regulation.

☒ RCRA EXEMPT:

Oil field wastes generated from oil and gas exploration and production operation and are not mixed with non-exempt waste (R360 Accepts certifications on a per load basis only)

☐ RCRA NON-EXEMPT:

Oil field waste which is non-hazardous that does not exceed the minimum standards for waste hazardous by characteristics established in RCRA regulations, 40 CFR 261.21-261.24, or listed hazardous waste as defined by 40 CFR, part 261, subpart D, as amended. The following documentation demonstrating the waste as non-hazardous is attached. (Check the appropriate items as provided)

Generator Certification Statement of Waste Status

I hereby certify that according to the Resource Conservation and Recovery Act (RCRA) and the US Environmental Protection Agency's July 1988 regulatory determination, the above described waste is:

- ☒ RCRA Exempt: Oil field wastes generated from oil and gas exploration and production operations and are not mixed with non-exempt waste
☐ RCRA Non-Exempt: Oil field waste which is non-hazardous that does not exceed the minimum standards for waste hazardous by characteristics established in RCRA regulations, 40 CFR 261.21-261.24 or listed hazardous waste as defined in 40 CFR, part 261, subpart D, as amended. The following documentation is attached to demonstrate the above-described waste is non-hazardous. (Check the appropriate items):
☐ MSDS Information ☐ RCRA Hazardous Waste Analysis ☐ Process Knowledge ☐ Other (Provide description above)

I hereby certify that the above listed material(s), is (are) not hazardous waste as defined by 40 CFR Part 261 or any applicable state law. That each waste has been properly described, classified and packaged, and is in proper condition for transportation according to applicable regulation.

☐ RCRA EXEMPT:

Oil field wastes generated from oil and gas exploration and production operation and are not mixed with non-exempt waste (R360 Accepts certifications on a per load basis only)

☐ RCRA NON-EXEMPT:

Oil field waste which is non-hazardous that does not exceed the minimum standards for waste hazardous by characteristics established in RCRA regulations, 40 CFR 261.21-261.24, or listed hazardous waste as defined by 40 CFR, part 261, subpart D, as amended. The following documentation demonstrating the waste as non-hazardous is attached. (Check the appropriate items as provided)

Generator Certification Statement of Waste Status

I hereby certify that according to the Resource Conservation and Recovery Act (RCRA) and the US Environmental Protection Agency's July 1988 regulatory determination, the above described waste is:

☒ RCRA Exempt: Oil field wastes generated from oil and gas exploration and production operations and are not mixed with non-exempt waste
☐ RCRA Non-Exempt: Oil field waste which is non-hazardous that does not exceed the minimum standards for waste hazardous by characteristics established in RCRA regulations, 40 CFR 261.21-261.24 or listed hazardous waste as defined in 40 CFR, part 261, subpart D, as amended. The following documentation is attached to demonstrate the above-described waste is non-hazardous. (Check the appropriate items):
☐ MSDS Information ☐ RCRA Hazardous Waste Analysis ☐ Process Knowledge ☐ Other (Provide description above)

Generator Certification Statement of Waste Status

I hereby certify that according to the Resource Conservation and Recovery Act (RCRA) and the US Environmental Protection Agency's July 1988 regulatory determination, the above described waste is:

- ☒ RCRA Exempt: Oil Field wastes generated from oil and gas exploration and production operations and are not mixed with non-exempt waste
- ☐ RCRA Non-Exempt: Oil field waste which is non-hazardous that does not exceed the minimum standards for waste hazardous by characteristics established in RCRA regulations, 40 CFR 261.21-261.24 or listed hazardous waste as defined in 40 CFR, part 261, subpart D, as amended. The following documentation is attached to demonstrate the above-described waste is non-hazardous. (Check the appropriate items)
- ☐ MSDS Information ☐ RCRA Hazardous Waste Analysis ☐ Process Knowledge ☐ Other (Provide description above)

Generator Certification Statement of Waste Status

I hereby certify that according to the Resource Conservation and Recovery Act (RCRA) and the US Environmental Protection Agency's July 1988 regulatory determination, the above described waste is:

- ☒ RCRA Exempt; Oil Field wastes generated from oil and gas exploration and production operations and are not mixed with non-exempt waste
☐ RCRA Non-Exempt; Oil field waste which is non-hazardous that does not exceed the minimum standards for waste hazardous by characteristics established in RCRA regulations, 40 CFR 261.21-261.24 or listed hazardous waste as defined in 40 CFR, part 261, subpart D, as amended. The following documentation is attached to demonstrate the above-described waste is non-hazardous. (Check the appropriate items):
☐ MSDS Information ☐ RCRA Hazardous Waste Analysis ☐ Process Knowledge ☐ Other (Provide description above)

Generator Certification Statement of Waste Status

I hereby certify that according to the Resource Conservation and Recovery Act (RCRA) and the US Environmental Protection Agency's July 1988 regulatory determination, the above described waste is:

☒ RCRA Exempt: Oil Field wastes generated from oil and gas exploration and production operations and are not mixed with non-exempt waste
☐ RCRA Non-Exempt: Oil field waste which is non-hazardous that does not exceed the minimum standards for waste hazardous by characteristics established in RCRA regulations, 40 CFR 261.21-261.24 or listed hazardous waste as defined in 40 CFR, part 261, subpart D, as amended. The following documentation is attached to demonstrate the above-described waste is non-hazardous. (Check the appropriate items):
☐ MSDS Information ☐ RCRA Hazardous Waste Analysis ☐ Process Knowledge ☐ Other (Provide description above)

Oil field wastes generated from oil and gas exploration and production operation and are not mixed with non-exempt waste (R360 Accepts certifications on a per load basis only)

☐ RCRA NON-EXEMPT

Oil field waste which is non-hazardous that does not exceed the minimum standards for waste hazardous by characteristics established in RCRA regulations, 40 CFR 261.21-261.24, or listed hazardous waste as defined by 40 CFR, part 261, subpart D, as amended. The following documentation demonstrating the waste as non-hazardous is attached. (Check the appropriate items as provided)

☐ MSDS Information☐ RCRA Hazardous Waste Analysis☐ Other (Provide Description Below)☐ EMERGENCY NON-OILFIELD

Emergency non-hazardous, non-oilfield waste that has been ordered by the Department of Public Safety (the order, documentation of non-hazardous waste determination and a description of the waste must accompany this form)

Generator Certification Statement of Waste Status

I hereby certify that according to the Resource Conservation and Recovery Act (RCRA) and the US Environmental Protection Agency's July 1988 regulatory determination, the above described waste is:

- ☒ RCRA Exempt: Oil field wastes generated from oil and gas exploration and production operations and are not mixed with non-exempt waste
☐ RCRA Non-Exempt: Oil field waste which is non-hazardous that does not exceed the minimum standards for waste hazardous by characteristics established in RCRA regulations, 40 CFR 261.21-261.24 or listed hazardous waste as defined in 40 CFR, part 261, subpart D, as amended. The following documentation is attached to demonstrate the above-described waste is non-hazardous. (Check the appropriate items):
☐ MSDS Information ☐ RCRA Hazardous Waste Analysis ☐ Process Knowledge ☐ Other (Provide description above)

E-EACH

I hereby certify that the above listed material(s), is (are) not hazardous waste as defined by 40 CFR Part 261 or any applicable state law. That each waste has been properly described, classified and packaged, and is in proper condition for transportation according to applicable regulation.

☐ RCRA EXEMPT:

Oil field wastes generated from oil and gas exploration and production operation and are not mixed with non-exempt waste (R360 Accepts certifications on a per load basis only)

☐ RCRA NON-EXEMPT:

Oil field waste which is non-hazardous that does not exceed the minimum standards for waste hazardous by characteristics established in RCRA regulations, 40 CFR 261.21-261.24, or listed hazardous waste as defined by 40 CFR, part 261, subpart D, as amended. The following documentation demonstrating the waste as non-hazardous is attached. (Check the appropriate items as provided)

Prerequisites	
Incident ID (n#)	nAPP2415825281
Incident Name	NAPP2415825281 OGDEN STATE #005A @ 30-015-37264
Incident Type	Other
Incident Status	Deferral Request Received
Incident Well	[30-015-37264] OGDEN STATE #005A

Location of Release Source	
<i>Please answer all the questions in this group.</i>	
Site Name	OGDEN STATE #005A
Date Release Discovered	03/12/2016
Surface Owner	State

Incident Details	
<i>Please answer all the questions in this group.</i>	
Incident Type	Other
Did this release result in a fire or is the result of a fire	No
Did this release result in any injuries	No
Has this release reached or does it have a reasonable probability of reaching a watercourse	No
Has this release endangered or does it have a reasonable probability of endangering public health	No
Has this release substantially damaged or will it substantially damage property or the environment	No
Is this release of a volume that is or may with reasonable probability be detrimental to fresh water	No

Nature and Volume of Release	
<i>Material(s) released, please answer all that apply below. Any calculations or specific justifications for the volumes provided should be attached to the follow-up C-141 submission.</i>	
Crude Oil Released (bbls) Details	Cause: Normal Operations Unknown Crude Oil Released: 0 BBL (Unknown Released Amount) Recovered: 0 BBL Lost: 0 BBL.
Produced Water Released (bbls) Details	Not answered.
Is the concentration of chloride in the produced water >10,000 mg/l	No
Condensate Released (bbls) Details	Not answered.
Natural Gas Vented (Mcf) Details	Not answered.
Natural Gas Flared (Mcf) Details	Not answered.
Other Released Details	Not answered.
Are there additional details for the questions above (i.e. any answer containing Other, Specify, Unknown, and/or Fire, or any negative lost amounts)	C-141 requested by OCD for area of impact identified in Google Earth aerial photo. Date of photo used in lieu of unknown release date. Environmental consultant obtained to investigate indicated area of approximately 900 sq. ft. located inside lined tank battery containment. Stained caliche being removed and disposed of at OCD approved facility. Preparing for liner inspection.

QUESTIONS, Page 2

Action 428921

QUESTIONS (continued)

Operator: Murchison Oil and Gas, LLC 7250 Dallas Parkway Plano, TX 75024	OGRID: 15363
	Action Number: 428921
	Action Type: [C-141] Deferral Request C-141 (C-141-v-Deferral)

QUESTIONS

Nature and Volume of Release (continued)	
Is this a gas only submission (i.e. only significant Mcf values reported)	No, according to supplied volumes this does not appear to be a "gas only" report.
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	Yes
Reasons why this would be considered a submission for a notification of a major release	From paragraph A. "Major release" determine using: (1) an unauthorized release of a volume, excluding gases, of 25 barrels or more.
With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.	

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.

The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	Not answered.

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

I hereby agree and sign off to the above statement	Name: Cindy Cottrell Title: Regulatory Coordinator Email: ccottrell@jdmii.com Date: 09/26/2024

QUESTIONS, Page 3

Action 428921

QUESTIONS (continued)

Operator: Murchison Oil and Gas, LLC 7250 Dallas Parkway Plano, TX 75024	OGRID: 15363
	Action Number: 428921
	Action Type: [C-141] Deferral Request C-141 (C-141-v-Deferral)

QUESTIONS

Site Characterization	
<i>Please answer all the questions in this group (only required when seeking remediation plan approval and beyond). This information must be provided to the appropriate district office no later than 90 days after the release discovery date.</i>	
What is the shallowest depth to groundwater beneath the area affected by the release in feet below ground surface (ft bgs)	Between 100 and 500 (ft.)
What method was used to determine the depth to ground water	Attached Document
Did this release impact groundwater or surface water	No
What is the minimum distance, between the closest lateral extents of the release and the following surface areas:	
A continuously flowing watercourse or any other significant watercourse	Between 1000 (ft.) and ½ (mi.)
Any lakebed, sinkhole, or playa lake (measured from the ordinary high-water mark)	Between 1 and 5 (mi.)
An occupied permanent residence, school, hospital, institution, or church	Between 1 and 5 (mi.)
A spring or a private domestic fresh water well used by less than five households for domestic or stock watering purposes	Between 1 and 5 (mi.)
Any other fresh water well or spring	Between 1 and 5 (mi.)
Incorporated municipal boundaries or a defined municipal fresh water well field	Between 1 and 5 (mi.)
A wetland	Between 1 and 5 (mi.)
A subsurface mine	Greater than 5 (mi.)
An (non-karst) unstable area	Greater than 5 (mi.)
Categorize the risk of this well / site being in a karst geology	High
A 100-year floodplain	Between 1 and 5 (mi.)
Did the release impact areas not on an exploration, development, production, or storage site	No

Remediation Plan	
<i>Please answer all the questions that apply or are indicated. This information must be provided to the appropriate district office no later than 90 days after the release discovery date.</i>	
Requesting a remediation plan approval with this submission	Yes
<i>Attach a comprehensive report demonstrating the lateral and vertical extents of soil contamination associated with the release have been determined, pursuant to 19.15.29.11 NMAC and 19.15.29.13 NMAC.</i>	
Have the lateral and vertical extents of contamination been fully delineated	Yes
Was this release entirely contained within a lined containment area	No
Soil Contamination Sampling: (Provide the highest observable value for each, in milligrams per kilograms.)	
Chloride (EPA 300.0 or SM4500 Cl B)	2440
TPH (GRO+DRO+MRO) (EPA SW-846 Method 8015M)	2142.6
GRO+DRO (EPA SW-846 Method 8015M)	1746.6
BTEX (EPA SW-846 Method 8021B or 8260B)	1.6
Benzene (EPA SW-846 Method 8021B or 8260B)	0.1
<i>Per Subsection B of 19.15.29.11 NMAC unless the site characterization report includes completed efforts at remediation, the report must include a proposed remediation plan in accordance with 19.15.29.12 NMAC, which includes the anticipated timelines for beginning and completing the remediation.</i>	
On what estimated date will the remediation commence	10/26/2024
On what date will (or did) the final sampling or liner inspection occur	01/22/2025
On what date will (or was) the remediation complete(d)	01/22/2025
What is the estimated surface area (in square feet) that will be reclaimed	11490
What is the estimated volume (in cubic yards) that will be reclaimed	1502
What is the estimated surface area (in square feet) that will be remediated	11490
What is the estimated volume (in cubic yards) that will be remediated	1502
<i>These estimated dates and measurements are recognized to be the best guess or calculation at the time of submission and may (be) change(d) over time as more remediation efforts are completed.</i>	
<i>The OCD recognizes that proposed remediation measures may have to be minimally adjusted in accordance with the physical realities encountered during remediation. If the responsible party has any need to significantly deviate from the remediation plan proposed, then it should consult with the division to determine if another remediation plan submission is required.</i>

QUESTIONS (continued)

Operator: Murchison Oil and Gas, LLC 7250 Dallas Parkway Plano, TX 75024	OGRID:	15363
	Action Number:	428921
	Action Type:	[C-141] Deferral Request C-141 (C-141-v-Deferral)

QUESTIONS

Remediation Plan (continued)	
<i>Please answer all the questions that apply or are indicated. This information must be provided to the appropriate district office no later than 90 days after the release discovery date.</i>	
This remediation will (or is expected to) utilize the following processes to remediate / reduce contaminants:	
<i>(Select all answers below that apply.)</i>	
(Ex Situ) Excavation and off-site disposal (i.e. dig and haul, hydrovac, etc.)	Yes
Which OCD approved facility will be used for off-site disposal	Not answered.
OR which OCD approved well (API) will be used for off-site disposal	Not answered.
OR is the off-site disposal site, to be used, out-of-state	Yes
In which state is the disposal taking place	TX
What is the name of the out-of-state facility	R360 Red Bluff Facility, Orla
OR is the off-site disposal site, to be used, an NMED facility	No
(Ex Situ) Excavation and on-site remediation (i.e. On-Site Land Farms)	No
(In Situ) Soil Vapor Extraction	No
(In Situ) Chemical processing (i.e. Soil Shredding, Potassium Permanganate, etc.)	No
(In Situ) Biological processing (i.e. Microbes / Fertilizer, etc.)	No
(In Situ) Physical processing (i.e. Soil Washing, Gypsum, Disking, etc.)	No
Ground Water Abatement pursuant to 19.15.30 NMAC	No
OTHER (Non-listed remedial process)	No
<i>Per Subsection B of 19.15.29.11 NMAC unless the site characterization report includes completed efforts at remediation, the report must include a proposed remediation plan in accordance with 19.15.29.12 NMAC, which includes the anticipated timelines for beginning and completing the remediation.</i>	
I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.	
I hereby agree and sign off to the above statement	Name: Cindy Cottrell Title: Regulatory Coordinator Email: ccottrell@jdmii.com Date: 02/06/2025
<i>The OCD recognizes that proposed remediation measures may have to be minimally adjusted in accordance with the physical realities encountered during remediation. If the responsible party has any need to significantly deviate from the remediation plan proposed, then it should consult with the division to determine if another remediation plan submission is required.</i>

Action 428921

QUESTIONS (continued)

Operator: Murchison Oil and Gas, LLC 7250 Dallas Parkway Plano, TX 75024	OGRID: 15363
	Action Number: 428921
	Action Type: [C-141] Deferral Request C-141 (C-141-v-Deferral)

QUESTIONS

Deferral Requests Only	
<i>Only answer the questions in this group if seeking a deferral upon approval this submission. Each of the following items must be confirmed as part of any request for deferral of remediation.</i>	
Requesting a deferral of the remediation closure due date with the approval of this submission	Yes
Have the lateral and vertical extents of contamination been fully delineated	Yes
Is the remaining contamination in areas immediately under or around production equipment where remediation could cause a major facility deconstruction	Yes
Please list or describe the production equipment and how (re)moving the equipment would cause major facility deconstruction	The equipment on site includes 3 - 500 bbl steel oil tanks, 2 - 500 bbl fiberglass produced water tanks, a 750 bbl fiberglass gun barrel, and a separator on a concrete pad. Removal of this equipment would cause major facility deconstruction. The wells would need to be shut in, production pipelines disconnected and tanks emptied, cleaned and moved off location. The concrete pad would need to be removed.
What is the remaining surface area (in square feet) that will still need to be remediated if a deferral is granted	2900
What is the remaining volume (in cubic yards) that will still need to be remediated if a deferral is granted	373
<i>Per Paragraph (2) of Subsection C of 19.15.29.12 NMAC if contamination is located in areas immediately under or around production equipment such as production tanks, wellheads and pipelines where remediation could cause a major facility deconstruction, the remediation, restoration and reclamation may be deferred with division written approval until the equipment is removed during other operations, or when the well or facility is plugged or abandoned, whichever comes first.</i>	
Enter the facility ID (f#) on which this deferral should be granted	Not answered.
Enter the well API (30-) on which this deferral should be granted	30-015-37264 OGDEN STATE #005A
Contamination does not cause an imminent risk to human health, the environment, or groundwater	True
<i>Per Subsection B of 19.15.29.11 NMAC unless the site characterization report includes completed efforts at remediation, the report must include a proposed remediation plan in accordance with 19.15.29.12 NMAC, which includes the anticipated timelines for beginning and completing the remediation.</i>	
I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

	Action Number: 428921
	Action Type: [C-141] Deferral Request C-141 (C-141-v-Deferral)

QUESTIONS

Sampling Event Information	
Last sampling notification (C-141N) recorded	422777
Sampling date pursuant to Subparagraph (a) of Paragraph (1) of Subsection D of 19.15.29.12 NMAC	01/22/2025
What was the (estimated) number of samples that were to be gathered	11
What was the sampling surface area in square feet	2200

Remediation Closure Request	
Only answer the questions in this group if seeking remediation closure for this release because all remediation steps have been completed.	
Requesting a remediation closure approval with this submission	No
