Brittany Hall,

Lario Oil & Gas Co (Lario) retained CDH Consulting, LLC (CDH) to complete delineation and remediation at the Close Encounters State Com #301H release. This plan proposes simultaneous delineation and remediation via excavation and presents analytical results for activities completed to date.

SITE INFORMATION

The Close Encounters State Com #301H is located approximately 4.20 miles south of Buckeye, New Mexico (Figure 1). The legal location description is Unit N, Section 13, Township 18 South, Range 34 East, Lea County, New Mexico.

On December 12, 2024, during coiled tubing rig up operations, the blowout preventer (BOP) fell from the forklift when a hydraulic line ruptured. Damage to the casing valve occurred when the BOP struck the well head casing valve, resulting in a loss of well control and a release to the environment. The release occurred on New Mexico State Trust Lease ID #VC06370003, flowed onto Lease ID #VB18760003 (Franklin Mountain Energy 3, LLC), and terminated on private land (Property Code: 4000779880001) owned by SB Land, LLC. Notification to SB Land, LLC., was completed immediately, a Notification of Release (NOR) was submitted to the New Mexico Oil Conservation Division (OCD), and the New Mexico State Land Office (SLO) was notified via their online reporting portal. Documentation of notification to the OCD and SLO are included in Attachment A. Landownership and lessee information is presented on Figure 2.

Wild Well Control of Odessa, Texas, was retained to regain well control and stop the release. On December 15, 2024, at approximately 11:34am Mountain Standard Time (MST), well control was regained, and the release was stopped. On December 27, 2024, the Initial Form C-141 was submitted to the OCD detailing the initial response efforts and estimated release volumes. The initial C-141 is included in Attachment A. The OCD has assigned incident #nAPP2434838184 to the release.

The total volume of oily water disposed at Clearwater SWD via vacuum truck is 10,600 barrels (bbl). Assuming 90% recovery, a total volume of 11,800 bbl was released. It is assumed that 90% of the total fluid released was water due to the fact this well was just completed, which results in estimated release volumes of 10,620 bbl of water and 1,180 bbl of oil. Gas Volumes (based on the type curves from nearby production wells) - $613.33 \text{ cubic feet/bbl} \times 12,350 \text{ bbls (oil)} = 7,574 \text{ thousand cubic feet (Mcf)}$ or 7.574 million cubic feet (MMcf). A summary of waste manifests for oily water and impacted soil (R360) will be included in the Remediation Closure Report.

SITE CHARACTERIZATION

The release flowed into the wash located east of the drilling pad and ultimately into Iron House Draw which is considered a significant watercourse and is mapped as Riverine wetland. The release terminated approximately 60 feet north of a playa lake and 20 feet north of a stock pond. The release is not within 300 feet of an occupied permanent residence, school, hospital, institution or church, is not within an unstable area, and is not within a 100-year floodplain. Mapped wetlands are presented on Figure 3.

An inactive groundwater well was identified on the United States Geological Survey (USGS) National Water Information System Mapper located approximately 70 feet south of the release terminus with a static water level documented to be 73.30 feet below ground surface (bgs) in 1996. New Mexico Office of the State Engineer (OSE) point of diversion (POD) L-03888 (active) is located approximately 185 feet east of the release with a static water level listed as 70 feet bgs in 1958. OSE POD L-09767 (capped) was located approximately 365 feet west of the release with a static water level listed as 96 feet bgs in 1985. OSE POD L-03721 (plugged) was located approximately 730 feet northeast of the release with a static water level listed as 90 feet bgs in 1957. Documentation for the water wells listed above are included in Attachment B. The location of the water wells relative to the site are presented on Figure 4.

On December 20, 2024, in accordance with the Cultural Properties Protection Rule (19.2.24 New Mexico Administrative Code [NMAC]), Advanced Archaeological Solutions of Las Cruces, New Mexico, completed an archaeological survey of the release site. No new archaeological sites or historic properties (built environment) were encountered during the survey. Two previous cultural resource surveys were conducted within or immediately adjacent to the current project area and include NMCRIS #155832 and NMCRIS #155040. During a preliminary records search of state and federal files, no archaeological sites were noted within 1,000 feet of the survey area. No isolated occurrences were observed within the survey area. Archaeological clearance for the proposed remediation of the release was recommended to proceed as defined by Advanced Archaeological Solutions and approved by the SLO Cultural Resources Office (CRO). The cover sheet for the archaeological survey is included as Attachment C.

Lario consulted with New Tech Global Environmental, LLC (NTGE) for evaluation of potential impacts to threatened, endangered, and sensitive wildlife and plant species, environmentally sensitive areas, surface waters, cave and karst features, and sensitive soils before conducting remediation and reclamation activities. On January 2, 2025, NTGE completed a desktop review of potential habitat of Special Status Plant Species (SSPS) within 200 meters of the Site, of sensitive wildlife habitat within the vicinity of the Site, and of migratory species that have the potential to be present and breeding within the vicinity of the

Site. On January 3, 2025, NTGE scientists were onsite to evaluate three potential sensitive receptors including R4SBA (Riverine), PEM1A (Freshwater Emergent Wetland), and PUBFx (Freshwater Pond). Lario constructed earthen berms within 12 hours of the initial release to protect any potential hydrologic resources protecting hydrophytic vegetation, hydric soil, and wetland hydrology. Based on the desktop review and site visit, NTGE concluded remediation efforts would not harm any sensitive receptors. If any sensitive receptors are identified, work will stop until further review by the SLO. The Biological Assessment is included as Attachment D.

DELINEATION/REMEDATION PLAN

Lario is currently in the process of simultaneously delineating and remediating chloride- and total petroleum hydrocarbons (TPH)-impacted soil via excavation. The aerial extent was mapped by CDH field staff using a portable GPS unit and determined the release footprint to be approximately 390,000 square feet. Photographs collected during the initial site walk are included in Attachment E. On December 19, 2024, the OCD approved a sampling frequency of one 5-point composite sample per every 400 square feet of excavation floor via email (Attachment A). On January 10, 2025, Lario, CDH, and SLO met via Microsoft Teams to establish a clear and reasonable path to closure for the project. The three stakeholders agreed to the following:

- Lario will continue to ensure good communication between Lario legal and the legal representative for SB Land, LLC.
- As the release impacted the Iron House Draw and threatened points of diversion, soil impacts will be delineated and remediated to the most stringent cleanup standards per 19.15.29.12.C.(4) NMAC:
 - Chloride - 600 mg/kg
 - TPH (GRO, DRO, MRO) - 100 mg/kg
 - BTEX - 50 mg/kg
 - Benzene - 10 mg/kg
- All chloride, TPH, and benzene, toluene, ethylbenzene, and total xylenes (BTEX) exceedances will be removed and hauled offsite for disposal.
- One confirmation soil sample will be collected for every 400 square feet of excavation floor.
- One confirmation soil sample will be collected for every 200 square feet of excavation sidewall.
- Within the sensitive environment (Iron House Draw), all TPH detections below the standard (100 milligrams per kilo gram [mg/kg]) will be treated with a biostimulation additive prior to backfilling to provide additional protection.
- SB Land, LLC., reported that the area north-northeast of the drilling pad was affected by overspray during the release. This area will continue to be investigated to determine the horizontal and vertical extent of identified TPH impacts (BG05 and OS25 [Figure 5a and Figure 5b]).
 - If exceedances are limited to the surface (less than 3-inches deep), a biostimulation additive will be applied prior to removing the impacted soil and destroying existing plant species/soil stability.
 - Follow-up performance sampling will be completed on a quarterly basis to ensure biostimulation additive success. Soil will only be excavated if the biostimulation additive is not successful after two rounds of quarterly sampling. If soil is excavated, confirmation soil samples will be collected at the sample frequency discussed above.

- The area will be maintained appropriately to maximize the effectiveness of the biostimulation additive by adding water if quarterly monitoring indicates the initial treatment was ineffective.
- 2-Day Sample Notification will be submitted for each day sampling is to be completed.
 - The OCD approved a variance (Attachment A) for sample notifications to be submitted on a weekly basis; therefore, SLO will receive sample notifications on a weekly basis.

To ensure chloride and/or TPH-impacted soil is successfully and completely removed from the release area, one 5-point composite confirmation soil sample will be collected for every 400 square feet of excavation floor and one 5-point composite confirmation soil sample will be collected for every 200 square feet of excavation sidewall. To manage and document this field effort, the release footprint was divided into 975 separate 400 square foot areas using ArcGIS. Should sidewall sampling indicate an increase in release footprint, additional floor and sidewall samples will be collected as required to maintain the sampling frequency specified above. Planned soil sample locations are presented on Figures 6a-6j.

Each confirmation soil sample will be placed into laboratory-supplied 4-ounce glass jars, labeled, stored in a cooler on ice, and submitted to Eurofins of Carlsbad, New Mexico, via standard chain-of-custody protocol for analysis of chloride per United States Environmental Protection Agency (EPA) SW-846 Method 300.0, TPH (GRO+DRO+MRO) per EPA SW-846 Method 8015M, BTEX per EPA SW-846 8021B, and benzene per EPA SW-846 Method 8021B. Laboratory analytical results will be compared to the most stringent cleanup standards per 19.15.29.12.C.(4) NMAC. All areas disturbed by remediation, except areas reasonably needed for production operations or for subsequent drilling operations, will be restored, reclaimed, and revegetated per 19.15.29.13 NMAC. The laboratory analytical reports for confirmation soil samples collected to date are included in Attachment G and summarized in Table 1.

TPHenhanced™ by TerraStryke® Products LLC (TerraStryke®), a biostimulation additive, has been selected to address TPH exceedances identified in the overspray area (if impacts exceeding the reclamation standard are determined to be limited to the top 3 inches of soil) as well as TPH detections below the reclamation standard (100 mg/kg) within Iron House Draw as added protection for the sensitive environment. The TerraStryke® proposal, safety data sheet (SDS), and case study are included in Attachment F.

TerraStryke® biostimulation strategies support the long-term and complete destruction/utilization of dissolved-phase and residual source mass (sorbed, blebs, ganglia, etc.) contaminants. Biostimulation enhances the natural attenuation of petroleum hydrocarbons by restoring the microbial ecosystem within the impacted soil. Presently, microbes are dormant due to the release of petroleum hydrocarbons. Biostimulation restores their ecosystem to allow the return to a revegetation state of dormant ultramicrobacteria (UMB) microbes, maximize microbial growth, communication and, via Quorum Sensing and Signaling (QSS), establish a collective workspace referred to as biofilm. Biofilm provides protection to the microbes inside from bulk water conditions, predation while allowing the exponential increase in genetic sharing. As a result, a consortium of bacteria works with a collective focus on the exploitation of energy (protons in this case) associated with the petroleum hydrocarbon contaminants. A secondary benefit to biofilm is the enhanced liberation of residual source mass (sorbed, ganglia, stringers, and blebs) effectively eliminating rebound up-front, safeguarding long-term compliance. Biostimulation is sustainable, works without aboveground equipment, requires no energy, and produces no nuisance noise, emissions, or vapors providing a low-impact solution.

A layer of TPHenhanced™ will be applied to each 400-square-foot sample area exhibiting TPH detections below the reclamation standard (100 mg/kg). Once TPHenhanced™ has been applied to the excavation floor, 90-100 gallons of water will be applied to the additive layer to facilitate infiltration of TPHenhanced™ into soil exhibiting a TPH detection, then backfilled. TPHenhanced™ will not be applied to areas where chloride (600 mg/kg), is exceeding the reclamation standard

A layer of TPHenhanced™ will be applied to the estimated 10,500-square-foot overspray area exhibiting TPH exceedances above the reclamation standard (100 mg/kg). Once TPHenhanced™ has been applied to the overspray area surface, 1,000 gallons of water will be applied to the additive layer to facilitate infiltration of TPHenhanced™ into soil exhibiting TPH exceedances.

Follow-up performance sampling will be completed to ensure the biostimulation additive was successful:

- Within Iron House Draw (sensitive environment), 5-point composite soil samples will be collected from the three sample areas that exhibit the highest TPH concentrations during initial assessment activities. The samples will be collected once per quarter for 6 months, following implementation of the biostimulation additive. The samples will be submitted for TPH (GRO+DRO+MRO) per EPA SW-846 Method 8015M, BTEX per EPA SW-846 8021B, and benzene per EPA SW-846 Method 8021B.
- In the overspray area, 5-point composite soil samples will be collected from the three sample areas that exhibit the highest TPH concentrations during initial assessment activities. The samples will be collected once per quarter for 6 months, following implementation of the biostimulation additive. The samples will be submitted for TPH (GRO+DRO+MRO) per EPA SW-846 Method 8015M, BTEX per EPA SW-846 8021B, and benzene per EPA SW-846 Method 8021B. Soil will only be excavated if the biostimulation additive proves to be unsuccessful after six months of quarterly soil sampling.

Remediation results will be submitted in a *Remediation Closure Report*.

RECLAMATION

Per 19.15.29.13 NMAC, Lario will reclaim all areas disturbed by remediation, except areas reasonably needed for production operations or for subsequent drilling operations, as early and as nearly as practical to their original condition and maintain those areas to control dust and minimize erosion to the extent practical. Areas reasonably needed for production operations or for subsequent drilling operations will be compacted, stabilized, and maintained to minimize dust and erosion. Reclamation will contain a minimum of 4 feet of non-waste containing, uncontaminated, earthen material with chloride concentrations less than 600 mg/kg as analyzed by EPA Method 300.0, TPH (GRO+DRO+MRO) concentrations less than 100 mg/kg per EPA SW-846 Method 8015M, total BTEX concentrations less than 50 mg/kg per EPA SW-846 8021B, and benzene concentrations less than 10 mg/kg per EPA SW-846 Method 8021B. The soil cover will include a top layer, which is either the background thickness of topsoil or one foot of suitable material to establish vegetation at the site, whichever is greater. All other debris will be removed and impacted soils unearthed will be remediated.

Site preparation will include backfilling and dozer track imprinting. The ripped areas will be recontoured for initial seedbed preparation. The original landform will be restored, as near as possible, for all unvegetated areas. Based on the soils at the Site, the SLO (SLO Seed Mix – Coarse Sites Seed Mixture) will be used for seeding and will be planted in the amount specified in the pounds pure live seed (PLS) per acre. No amendments are recommended by the seed supplier. The seed mixture will be spread by a hand-held broadcaster and raked in; therefore, the pounds PLS per acre will be doubled. After seeding, the area will be watered to promote seed growth.

The prepared soils within the site will be seeded with a seed mix purchased from a New Mexico Department of Agriculture (NMDA) licensed dealer. Soil at the site is characterized as Kimbrough gravelly loam and the corresponding "Coarse" seed mix will be used. The seed mix will include:

Common Name	Variety	Application Rate (PLS/Acre)	Drill Box
Sand Bluestem, "Chet" (<i>Andropogon hallii</i>)	VNS, Southern	2.0	F
Sideoats Grama, "Vaughn" (<i>Bouteloua curtipendula</i>)	Vaughn, El Reno	2.0	F
Blue Grama, "Lovington" (<i>Bouteloua Gracilis</i>)	Hachita, Lovington	1.5	D
Little Bluestem, "Cimarron" (<i>Schizachyrium scoparium</i>)	Cimmaron, Pastura	1.5	F
Sand Dropseed, (<i>Sporobolus cryptandrus</i>)	VNS, Southern	1.0	S
Plains Bristlegrass, (<i>Setaria vulpiseta</i>)	VNS, Southern	0.75	D

Following seeding operations, the seed tags will be made available to the SLO, along with a copy of the materials certification in a *Reclamation Activities Report*. Reclamation activities will be documented with photographs in landscape view and will be timestamped with GPS data in decimal degrees. Site photographs will be submitted with the *Reclamation Activities Report*.

The areas not located on the drilling pad will be monitored for vegetative growth to ensure the reclamation is successful. Monitoring will include inspections completed on a semi-annual basis until reclamation is considered complete. The inspections will include monitoring and treating the reclamation for unauthorized traffic, erosion, and invasive or noxious weeds. If surface erosion is identified, sediment control measures will be installed to reduce erosion and capture sediment-laden runoff. Invasive or noxious weeds will be managed by a wide variety of integrated techniques that include cutting, mowing, digging, grubbing, and targeted herbicide application. Once vegetation has been established that is representative of pre-disturbance vegetation cover with a total percent plant cover of greater than 70% of pre-disturbance area levels (excluding invasive or noxious weeds), a subsequent *Final Reclamation Report and Reclamation Closure Request* will be submitted to the SLO.

QUESTIONS

Nature and Volume of Release (continued)	
Is this a gas only submission (i.e. only significant Mcf values reported)	No, according to supplied volumes this does not appear to be a "gas only" report.
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	Yes
Reasons why this would be considered a submission for a notification of a major release	From paragraph A. "Major release" determine using: (1) an unauthorized release of a volume, excluding gases, of 25 barrels or more; (3) an unauthorized release of gases exceeding 500 MCF.
With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.	

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.

The source of the release has been stopped	False
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	False
If all the actions described above have not been undertaken, explain why	During coiled tubing rig up operations, the BOP fell from the forklift striking the well head casing valve. Damage to the casing valve resulted in a loss of well control and a release. Wild Well Control is on-site to regain well control and stop the release. Additional details will be provided in subsequent reports.

Per Paragraph 4 of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see 19.15.29.11(A)(5)(a) NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

The event began on 12/12/24 at approximately 12:30 MST and the well was back under control on 12/15/24 at approximately 11:34 MST. Recovered volumes based on the calculations from the trucking companies (number of loads hauled X 100 - 110 bbls /load) and the disposal site loads received. The percentages are estimates. Due to the rapid response time, most of the fluids were captured on or immediately adjacent to the pad via containments that were constructed.

- Total Fluid Volumes - ~19,000 bbls
- Estimated Hydrocarbons (oil) - 65% or 12,350 bbls
- Water Volumes (Includes both produced and fresh water from the frac) - 6,650 bbls
- Gas Volumes (Based on the type curves from area 3rd BS wells) - 613.33 cu.ft / bbl X 12,350 bbls of oil = 7,574 Mcf or 7.574 MMcf

Michael,

Lario is approved to obtain confirmation floor samples representative of no more than 400 square feet and sidewall samples representative of no more than 200 square feet, however, collection of confirmation samples requires two business days' notice (C-141N) prior to collection. If you are obtaining those samples today, be advised that the required notice has not been provided and those samples obtained without notification may not be accepted.

Include a copy of all correspondence in future submittals.

CAUTION: This email originated outside of our organization. Exercise caution prior to clicking on links or opening attachments.

Good Morning, Mike,

Earlier this week we discussed (via phone call) collecting confirmation soil samples at a frequency of every 400 square feet for floor samples and every 200 square feet for sidewall samples due to the footprint of the release (~390,000 square feet). Your guidance was to propose the 400 square-foot sampling frequency for floor samples in the Remediation Plan; however, the OCD Permitting website give an error message when you select "yes" for "Requesting a remediation plan approval with this submission" and also select "No" for "Have the lateral and vertical extents of contamination been fully delineated"

The screenshot shows a web form titled "Remediation Plan". Below the title is a instruction: "Please answer all the questions that apply or are indicated. This information must be provided to the appropriate district office no later than 90 days after the release discovery date." There is a question: "Requesting a remediation plan approval with this submission" with a "Yes" button selected. To the right of the question are "Clear" and "Reset" buttons. Below the question is a yellow error message box that says: "Correction: Remediation Plan cannot be submitted if the extent of contamination has not been fully delineated." At the bottom of the form, there is a text area with the instruction: "Attach a comprehensive report demonstrating the lateral and vertical extents of soil contamination associated with the release have been determined, pursuant to 19-15-20-11 NMAC and 19-15-20-13 NMAC."

Variance Request

The release extent has been mapped based on visual impacts and we plan to begin collecting confirmation soil samples today on the pad following initial release response efforts. We have setup a GIS layer in Field Maps that created 975 sample areas (400 square feet each) within the release extent area. Can you approve of the 400 square-foot sampling frequency for floor samples via email? While we are early in this cleanup process we want to ensure we are efficiently working towards closure and hope to have some assurance we wont need to increase the sampling frequency.

Thank you!
Michael

CAUTION: This email originated outside of our organization. Exercise caution prior to clicking on links or opening attachments.

Hi Brittany,

Per 19.15.29.14, Lario is requesting variance from 19.15.29.12.D(1)(a), requiring the responsible party notify the appropriate division district office two business days prior to conducting final sampling. Due to the volume of samples required to be collected (over 1,000), delineation/remediation will take several months to complete at the Close Encounters

State Com #301H release (nAPP2434838184).

Lario is requesting the OCD accept weekly sampling notifications that summarize the days, times, estimated square footage, and number of samples to be collected for the week. This variance would give the OCD the same opportunity to observe the collection of confirmation soil samples as 19.15.29.12.D(1)(a) which provides “equal or better protection of fresh water, public health and the environment” but would save the OCD and Lario the time of submitting these notifications daily.

OCD approval of this variance will be shared with the SLO. Weekly sampling notifications will be forwarded to the SLO.

Thank you!
Michael

Hello

Thank you for the summary. If remediation closure will not be completed within the NMOCD 90 day closure window then we do need the written remediation workplan.

Delineation while you are conducting the remediation excavation is acceptable. I'm not clear on what you are referencing in your last bullet regarding a site delineation plan.

Hi Tami,

We wanted to thank you for taking the time out of your busy schedule to meet with us today. Per our conversation, Lario/CDH will proceed with site characterization/delineation/remediation by completing the following:

- Lario will continue to ensure good communication between Lario legal and Seth's lawyer

- Analytical results will be compared to the most stringent standard to protect the sensitive environment
 - All chloride, TPH, & BTEX exceedances will be removed and hauled offsite for disposal
- One confirmation soil sample will be collected for every 400 square feet
- Within the sensitive environment (Iron House Draw), all TPH detections below the standard (100 mg/kg) will be treated with a microbial amendment prior to backfilling
 - Does NMSLO have a list of approved or recommended products? Even if that list isn't official, we have found that different products perform better in different areas so would like to get your thoughts.
- The area to the northeast of the drilling pad will be investigated in coordination with Seth
 - The area will be photo documented and mapped with a GPS unit
 - Samples will be collected to determine if impacts to the area are present
 - If exceedances are identified and deemed to be surficial from 0" to 2" deep, a microbial amendment will be applied prior to removing the impacted soil and destroying existing plant species/soil stability
 - The area will be maintained appropriately to maximize the microbial amendments effectiveness, including adding moisture, if appropriate based on the amendment selected
 - Follow-up performance sampling to be completed to ensure microbial amendment success
 - Soil will only be excavated if the microbial amendment proves to be unsuccessful after six months of quarterly soil sampling
- 2-Day Sample Notification will be submitted for each day sampling is to be completed
 - Once the NMOCD approves a variance for sample notifications to be submitted on a weekly basis, NMSLO will also receive sample notifications on weekly basis and will deem this notification frequency acceptable
- Lario to submit a Site Characterization/Delineation Plan to the NMOCD/NMSLO to solidify the path forward for all stakeholders
 - The Plan will include all required documents identified in the *Environmental Compliance Office Document Checklist*, including but not limited to:
 - A paragraph stating when ARMS review & survey were completed
 - The cover sheet for the ARMS review & survey
 - Documentation or statement of applicability regarding working in biologically sensitive areas

We truly appreciate your time and guidance and look forward to working with you on this and future projects.

Thank you!
Michael

QUESTIONS

Nature and Volume of Release (continued)	
Is this a gas only submission (i.e. only significant Mcf values reported)	No, according to supplied volumes this does not appear to be a "gas only" report.
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	Yes
Reasons why this would be considered a submission for a notification of a major release	From paragraph A. "Major release" determine using: (1) an unauthorized release of a volume, excluding gases, of 25 barrels or more; (3) an unauthorized release of gases exceeding 500 MCF.
With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.	

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.

The source of the release has been stopped	False
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	False
If all the actions described above have not been undertaken, explain why	During coiled tubing rig up operations, the BOP fell from the forklift striking the well head casing valve. Damage to the casing valve resulted in a loss of well control and a release. Wild Well Control is on-site to regain well control and stop the release. Additional details will be provided in subsequent reports.

Per Paragraph 4 of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see 19.15.29.11(A)(5)(a) NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

The event began on 12/12/24 at approximately 12:30 MST and the well was back under control on 12/15/24 at approximately 11:34 MST. Recovered volumes based on the calculations from the trucking companies (number of loads hauled X 100 - 110 bbls /load) and the disposal site loads received. The percentages are estimates. Due to the rapid response time, most of the fluids were captured on or immediately adjacent to the pad via containments that were constructed.

- Total Fluid Volumes - ~19,000 bbls
- Estimated Hydrocarbons (oil) - 65% or 12,350 bbls
- Water Volumes (Includes both produced and fresh water from the frac) - 6,650 bbls
- Gas Volumes (Based on the type curves from area 3rd BS wells) - 613.33 cu.ft / bbl X 12,350 bbls of oil = 7,574 Mcf or 7.574 MMcf

CAUTION: This email originated outside of our organization. Exercise caution prior to clicking on links or opening attachments.

Good Morning, Mike,

Earlier this week we discussed (via phone call) collecting confirmation soil samples at a frequency of every 400 square feet for floor samples and every 200 square feet for sidewall samples due to the footprint of the release (~390,000 square feet). Your guidance was to propose the 400 square-foot sampling frequency for floor samples in the Remediation Plan; however, the OCD Permitting website give an error message when you select "yes" for "Requesting a remediation plan approval with this submission" and also select "No" for "Have the lateral and vertical extents of contamination been fully delineated"

The screenshot shows a web form titled "Remediation Plan". Below the title is a instruction: "Please answer all the questions that apply or are indicated. This information must be provided to the appropriate district office no later than 90 days after the release discovery date." There is a question: "Requesting a remediation plan approval with this submission" with a "Yes" button selected. To the right of the question are "Clear" and "Reset" buttons. Below the question is a yellow error message box that says: "Correction: Remediation Plan cannot be submitted if the extent of contamination has not been fully delineated." At the bottom of the form, there is a text area with the instruction: "Attach a comprehensive report demonstrating the lateral and vertical extents of soil contamination associated with the release have been determined, pursuant to 19-15-20-11 NMAC and 19-15-20-13 NMAC."

Variance Request

The release extent has been mapped based on visual impacts and we plan to begin collecting confirmation soil samples today on the pad following initial release response efforts. We have setup a GIS layer in Field Maps that created 975 sample areas (400 square feet each) within the release extent area. Can you approve of the 400 square-foot sampling frequency for floor samples via email? While we are early in this cleanup process we want to ensure we are efficiently working towards closure and hope to have some assurance we wont need to increase the sampling frequency.

Thank you!
Michael

Hi Brittany,

Per 19.15.29.14, Lario is requesting variance from 19.15.29.12.D(1)(a), requiring the responsible party notify the appropriate division district office two business days prior to conducting final sampling. Due to the volume of samples required to be collected (over 1,000), delineation/remediation will take several months to complete at the Close Encounters

State Com #301H release (nAPP2434838184).

Lario is requesting the OCD accept weekly sampling notifications that summarize the days, times, estimated square footage, and number of samples to be collected for the week. This variance would give the OCD the same opportunity to observe the collection of confirmation soil samples as 19.15.29.12.D(1)(a) which provides “equal or better protection of fresh water, public health and the environment” but would save the OCD and Lario the time of submitting these notifications daily.

OCD approval of this variance will be shared with the SLO. Weekly sampling notifications will be forwarded to the SLO.

Thank you!
Michael

Hello

Thank you for the summary. If remediation closure will not be completed within the NMOCD 90 day closure window then we do need the written remediation workplan.

Delineation while you are conducting the remediation excavation is acceptable. I'm not clear on what you are referencing in your last bullet regarding a site delineation plan.

Hi Tami,

We wanted to thank you for taking the time out of your busy schedule to meet with us today. Per our conversation, Lario/CDH will proceed with site characterization/delineation/remediation by completing the following:

- Lario will continue to ensure good communication between Lario legal and Seth's lawyer

- Analytical results will be compared to the most stringent standard to protect the sensitive environment
 - All chloride, TPH, & BTEX exceedances will be removed and hauled offsite for disposal
- One confirmation soil sample will be collected for every 400 square feet
- Within the sensitive environment (Iron House Draw), all TPH detections below the standard (100 mg/kg) will be treated with a microbial amendment prior to backfilling
 - Does NMSLO have a list of approved or recommended products? Even if that list isn't official, we have found that different products perform better in different areas so would like to get your thoughts.
- The area to the northeast of the drilling pad will be investigated in coordination with Seth
 - The area will be photo documented and mapped with a GPS unit
 - Samples will be collected to determine if impacts to the area are present
 - If exceedances are identified and deemed to be surficial from 0" to 2" deep, a microbial amendment will be applied prior to removing the impacted soil and destroying existing plant species/soil stability
 - The area will be maintained appropriately to maximize the microbial amendments effectiveness, including adding moisture, if appropriate based on the amendment selected
 - Follow-up performance sampling to be completed to ensure microbial amendment success
 - Soil will only be excavated if the microbial amendment proves to be unsuccessful after six months of quarterly soil sampling
- 2-Day Sample Notification will be submitted for each day sampling is to be completed
 - Once the NMOCD approves a variance for sample notifications to be submitted on a weekly basis, NMSLO will also receive sample notifications on weekly basis and will deem this notification frequency acceptable
- Lario to submit a Site Characterization/Delineation Plan to the NMOCD/NMSLO to solidify the path forward for all stakeholders
 - The Plan will include all required documents identified in the *Environmental Compliance Office Document Checklist*, including but not limited to:
 - A paragraph stating when ARMS review & survey were completed
 - The cover sheet for the ARMS review & survey
 - Documentation or statement of applicability regarding working in biologically sensitive areas

We truly appreciate your time and guidance and look forward to working with you on this and future projects.

Thank you!
Michael

Re: **TerraStryke®** Proposal 2025-0600 **TPH^{ENHANCED}™** Biostimulation Remediation Strategy
Close Encounters State Com. #301H, Lario Oil & Gas, Lea County New Mexico (Site)

Michael,

TerraStryke® Products LLC (**TerraStryke®**) appreciates the opportunity to provide CDH Consultants (CDH) the following proposal for purchase of the **TerraStryke®** biostimulation additive **TPH^{ENHANCED}™**. The additive will be used in conjunction with the remediation of surface and shallow soils contaminated with petroleum hydrocarbons (PHC) as a result of an unauthorized release from an aboveground bulk storage tank.

TerraStryke® biostimulation strategies support the long-term and *complete* destruction/utilization of dissolved phase and residual source mass (sorbed, blebs, ganglia etc.) contaminants. Biostimulation enhances the natural attenuation of petroleum hydrocarbons (PHCs) by restoring the microbial ecosystem within the impacted zones. Presently the microbes are dormant due to the release of PHCs. Biostimulation restores their ecosystem to allow the return to a revegetation state of dormant (UMB) microbes, maximize microbial growth, communication and, via Quorum Sensing and Signaling (QSS), establish a collective workspace referred to as biofilm.

Site Concern: Due to a blowout during drilling activities PHC contaminants migrated down a dry gulch adversely impacting surficial and shallow soils along its path. The location is in a remote location which averages ≤16 inches of rain annually. Contaminants of concern include Deisel Range Organics (DRO) above regulatory compliance standards between 0-3ft below ground surface (bgs). Delineation allowed identification and removal of impacted soils generating numerous 400s.f. shallow open excavations. The goal of this biostimulation project is to amend the floor of each of the open areas with a solution of **TPH^{ENHANCED}™** and water prior to backfill to address potential residual mass 1-2ft below the excavation floor. Table One below provides an estimated cost of additive per trench section.

Table One

Item	Dimensions	Per Excavation	Unit Price	Cost ¹
Typical Excavation	20ft x 20ft x 1 ½ ft (600 c.f.)	264 pounds (8 x 33lb bags) TPH^{ENHANCED}™	\$ 5.22 per pound	\$ 1,378.08
Transportation	Lump Sum			\$ 1,250.00
Total Price				\$ 2,628.08

¹Costs include Customs fees, US taxes, fees and duties, and Canadian associated HST fees.*

²One skid material capable of amending 6-open areas.

**Proposal 2025-0600**

Page Two

Biofilm provides protection to the microbes inside from bulk water conditions, predation while allowing the exponential increase in genetic sharing. As a result, a consortium of bacteria works with a collective focus on the exploitation of energy, protons in this case, associated with the PHC contaminants. Secondary benefit to biofilm is the enhanced liberation of residual source mass (sorbed, ganglia, stringers, blebs) effectively eliminating rebound up-front safeguarding long-term compliance. Biostimulation is sustainable, works without aboveground equipment, requires no energy, and produces no nuisance noise/emissions or vapors. Simply low-cost low-impact performance.

Program: Contaminated soils have been excavated and removed off-site. As noted earlier, a solution of **TPH^{ENHANCED}**™ will be applied to the entire floor of each open excavation. The solution will consist of roughly 264-lbs additive (8 bags) blended with 90 to 100-gallons water. When completed the amending excavation floor shall be backfilled with clean soil. After backfilling it would be ideal if additional water is applied to the surface fully saturating the ≈3ft zone.

TerraStryke® has also been asked to provide the cost of a biostimulation solution to amend an approximate 10,500 s.f. area, to the same depths noted above, applying the additive solution using the same techniques as noted above with similar contaminant levels. Here the additive solution is to be applied directly to the ground surface and allowed to percolate ≤3-inches below ground surface. If blended in a single event the amount of water recommended is 1,000-gallons to create a 25% by solids solution.

Item	Dimensions	Volume Additive	Unit Price	Cost ¹
DRO Impacted Surface Soils	100ft x 105ft x 3 to 6-inches (6,090 c.f.)	3,168 pounds (96 x 33lb bags) TPHENHANCED™	\$ 5.22 per pound	\$ 16,536.96
Transportation	Combined	Per Skid Lump Sum (63 bags per skid)		\$ 2,600.00
Total Price				\$ 19,136.96

Performance: Groundwater samples will not be available during the project. Soil samples collected at a period designated by CDH using PID readings will be sample and analyzed for compliance purposes. Additive efficacy is determined by comparing baseline conditions to those recorded during performance monitoring/analytical testing events performed throughout the remedial program. Monitoring metrics for groundwater samples are listed below. Analytes for soil samples, in addition to Site COCs, are highlighted.

Assumptions: For loading purposes, it is assumed background groundwater conditions include ≈ 25 mg/L total organic carbon (TOC); this is standard loading protocol designed to provide a level of contingency, soils are normal in terms of pH and there are no other conditions that would be detrimental to the growth and development of indigenous microbial populations. The volume of additive presented is based on information supplied by CDH and, to the extent any such information is incorrect or needs to be modified, the costs and volumes of material quoted herein may be subject to change based on the new information.

Costs: Costs presented are based on current supplier pricing. Any increase or decrease in the cost of raw materials will be reflected on a new pricing sheet to be supplied by **TerraStryke®** in the event of any change both parties understand and agree that any such increase or decrease in costs will apply to this proposal and may vary the total costs quoted herein. Pricing is secure for 30-days past the proposal date.

Project Highlights

TPHENHANCED™ is a cost-effective remediation strategy that maximizes your remediation dollar.

TPHENHANCED™ provides expedited destruction of Site contaminants, eliminating liabilities and risks faster.

TPHENHANCED™ provides a metabolic analog to Oxygen (O₂), supporting indigenous microbes anaerobically to achieve greater performance.

TPHENHANCED™ represents a **Green** strategy that minimizes the impact of remediation.

TPHENHANCED™ **cost-effectively** eliminates aboveground energy consuming, emissions generating equipment to lower impacts.

TPHENHANCED™ allows for faster redevelopment of your site to enhance the value of your property.

TPHENHANCED™ maximizes performance, eliminates liabilities while, enhancing redevelopment and property values.

TerraStryke® TPHENHANCED™ Residual Source Mass Remediation Mineral Oil Bioremediation Demonstration, Midwest Utility Company

Site: Consultant established three field study plots consisting of 100 s.f. each with assumed 5ft vertical impact. Each plot dosed with separate amendments, one being **TPHENHANCED™**. Each test area was dosed with 100,000 ug/L mixture of water, mineral oil, diesel, and gasoline; typical contaminants associated with utility service facilities.

Concern: Electrical transformer cooling fluids function as insulation and heat transfer. Mineral Oil typically meets transformer thermal requirements and significantly extends transformer lifespans. Occasionally transformers fail, and variable amounts of mineral oil is released to the environment, onto concrete surfaces and into subsurface soils.

Program: To show the efficacy of biostimulation and the additive **TPHENHANCED™** in expediting the destruction of Mineral Oil and TPH components a 120-day evaluation was performed at a typical site. Six (6) test plots were created, each dosed with 4-6 gallons Mineral Oil/TPH solution with microbes. Test plots were identified as CTR (Control) Shallow and Deep, Formula 1 Cat shallow/deep (contains **TPHENHANCED™**), Formula 1 CI Deep, and Piranha Deep; each dosed with oil, an additive, and microbes.

Results: At day 114 the **TPHENHANCED™** amended plot averaged a **97.1%↓** decrease in contaminant levels in shallow soils; an 80.2%↓ reduction, deep soils. The nearest challengers realized 69.8%, 65.3% and 63.1% reductions in deep soils; results that are, at a minimum, >30% better in overall performance.

By the end of 2019 the **TPHENHANCED™** amended plots (OFBC Shallow/Deep) realized the greatest mass reductions in Diesel, Motor Oil and, Mineral Oil than all the other bioplots. In fact, the OFBC and CTRL shallow soil sample intervals exhibited greater reductions in petroleum hydrocarbon than the deeper soil samples from their respective plots, and the OFBC Plot exhibited greater than 96% percent degradation of petroleum hydrocarbon compounds in Mineral Oil. The deep soil sample from the OFBC Plot exceeded 75% degradation of Diesel concentrations, and 80% of the Motor Oil fraction.

*The demonstration documented greater efficiencies in soil contaminant removal using **TPHENHANCED™** allowing all Stakeholders shorter compliance timelines, reduced liabilities, expedited redevelopment opportunities with less site impacts at lower costs.*

As noted the evaluation extended a total of 122-days between June and October 2019. The OFBC Plot amended with **TPHENHANCED™** was provided a biostimulant containing a non-Oxygen based respiratory source and a macro-micro nutrient package designed to restore the indigenous microbial ecology. The consultant further added a consortium of Archaea bacteria to each plot capable of degrading chlorinated hydrocarbons.

Summary: The data indicates that definitive conclusions can be made on the effectiveness of the biostimulation program and the biostimulation additive **TPHENHANCED™**, as observed at OFBC Shallow and Deep. A complete summary of soil reductions observed per biplot are summarized below.

SOILS	OFBC SHALLOW TPHENHANCED™	OFBC DEEP TPHENHANCED™	OFCL DEEP	PRNA DEEP	SHALLOW CONTROL	DEEP DIESEL CONTROL
DIESEL	-96.6%	-75.6%	-61.0%	-56.3%	-82.8%	-53.2%
MOTOR OIL	-97.1%	-80.2%	-69.8%	-65.3%	-86.3%	-63.1%
TPH	-96.8%	-77.8%	-65.2%	-60.6%	-84.5%	-57.9%

TPHENHANCED™ AMENDED PLOTS!

Summary: 122-day evaluation demonstrated biostimulation with **TPHENHANCED™** provides greater contaminant destruction realizing, as compared to current industry standards realizing;

- >96% reduction in [TPH]
- >97% reduction in [Motor Oil] range hydrocarbons, and
- >96% reduction in [DRO] Diesel range organics.

Conclusions: By supporting the microbial ecosystem with the biostimulation additive **TPHENHANCED™** you support indigenous microbial growth, communication, Quorum Sensing/Signaling (QSS) and the development of biofilm.

Properly supported microbial populations will stop behaving as individuals and establish collective's laser focused on the majority source of energy present. Utility sites, gas stations, manufacturing facilities all have petroleum hydrocarbon contaminants (PHC) which always represent energy in the form of protons.

TPHENHANCED™ and its proprietary nutrient package is proven to enhance the indigenous microbial populations reach necessary densities without augmentation; we don't care how many are there to start, nor do we care who is there to start, we assure you they are there and just need your support to allow your realizing compliance faster with less costs, less impacts.

What does this mean to you? By organically expediting the destruction of dissolved-phase and residual source mass contaminants via biostimulation alone, we at **TerraStryke®** allow all Stakeholders to realize compliance with less costs and less impacts, expeditiously eliminating liabilities while maximizing redevelopment opportunities and enhancing your property value. Together we can help maximize your remediation dollar and stop exhausting your bank account.

Job Narrative 890-7492-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 12/19/2024 3:45 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.0°C.

Receipt Exceptions

GC VOA

Method 8021B: The following samples were diluted due to physical characteristics such as color, odor, appearance, viscosity, etc. >>: SS 01 (890-7492-1), SS 20 (890-7492-2), SS 80 (890-7492-4), SS 262 (890-7492-5) and SS 320 (890-7492-6). Elevated reporting limits (RL) are provided.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 01 (890-7492-1), SS 20 (890-7492-2) and SS 64 (890-7492-3). Evidence of matrix interferences is not obvious.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 398 (890-7492-16) and SS 200 (890-7492-18). Evidence of matrix interferences is not obvious.

Method 8021B: Surrogate recovery for the following sample was outside control limits: SS 176 (890-7492-21). Evidence of matrix interferences is not obvious.

Method 8021B: The following samples were diluted due to the nature of the sample matrix: SS 488 (890-7492-7), SS 46 (890-7492-8), SS 107 (890-7492-9), SS 290 (890-7492-10), SS 339 (890-7492-11) and SS 495 (890-7492-12). Elevated reporting limits (RLs) are provided.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 46 (890-7492-8), SS 290 (890-7492-10) and SS 495 (890-7492-12). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8021B: The following sample was diluted due to the nature of the sample matrix: SS 504 (890-7492-15). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics

Method 8015MOD_NM: Surrogate recovery for the following sample was outside control limits: (LCSD 880-98402/3-A). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-98402 and analytical batch 880-98425 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within

acceptance limits.

Method 8015MOD_NM: Surrogate recovery for the following sample was outside control limits: SS 262 (890-7492-5). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: Due to the high concentration of Diesel Range Organics (Over C10-C28), the matrix spike (MS) for preparation batch 880-98403 and analytical batch 880-98427 could not be evaluated for accuracy. The associated matrix spike duplicate (MSD) met acceptance criteria.

Method 8015MOD_NM: Surrogate recovery for the following samples were outside control limits: SS 477 (890-7492-20), (LCS 880-98403/2-A) and (LCSD 880-98403/3-A). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The method blank for preparation batch 880-98404 and analytical batch 880-98430 contained Diesel Range Organics (Over C10-C28) above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 8015MOD_NM: An incorrect volume of surrogate spiking solution was inadvertently added the following samples: (LCS 880-98404/2-A) and (LCSD 880-98404/3-A). Percent recoveries are based on the amount spiked.

Method 8015MOD_NM: The laboratory control sample (LCS) associated with preparation batch 880-98404 and analytical batch 880-98430 was outside acceptance criteria. Re-extraction and/or re-analysis could not be performed; therefore, the data have been reported. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits and may be used to evaluate matrix performance.

Method 8015MOD_NM: The laboratory control sample (LCS) for preparation batch 880-98403 and analytical batch 880-98427 recovered outside control limits for the following analytes: Gasoline Range Organics (GRO)-C6-C10. Since only an acceptable LCSD is required per the method, the LCSD shows recovery for the batch and the data has been qualified and reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

Method 300_ORGFM_28D - Soluble: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-98374 and analytical batch 880-98376 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative 890-7492-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 12/19/2024 3:45 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.0°C.

Receipt Exceptions

The following samples were received and analyzed from an unpreserved bulk soil jar: SS 01 (890-7492-1), SS 20 (890-7492-2), SS 64 (890-7492-3), SS 80 (890-7492-4), SS 262 (890-7492-5), SS 320 (890-7492-6), SS 488 (890-7492-7), SS 46 (890-7492-8), SS 107 (890-7492-9), SS 290 (890-7492-10), SS 339 (890-7492-11), SS 495 (890-7492-12), SS 129 (890-7492-13), SS 154 (890-7492-14), SS 504 (890-7492-15), SS 398 (890-7492-16), SS 183 (890-7492-17), SS 200 (890-7492-18), SS 435 (890-7492-19), SS 477 (890-7492-20), SS 176 (890-7492-21), SS 138 (890-7492-22) and SS 420 (890-7492-23).

GC VOA

Method 8021B: The following samples were diluted due to physical characteristics such as color, odor, appearance, viscosity, etc. >>: SS 01 (890-7492-1), SS 20 (890-7492-2), SS 80 (890-7492-4), SS 262 (890-7492-5) and SS 320 (890-7492-6). Elevated reporting limits (RL) are provided.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 01 (890-7492-1), SS 20 (890-7492-2) and SS 64 (890-7492-3). Evidence of matrix interferences is not obvious.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 398 (890-7492-16) and SS 200 (890-7492-18). Evidence of matrix interferences is not obvious.

Method 8021B: Surrogate recovery for the following sample was outside control limits: SS 176 (890-7492-21). Evidence of matrix interferences is not obvious.

Method 8021B: The following samples were diluted due to the nature of the sample matrix: SS 488 (890-7492-7), SS 46 (890-7492-8), SS 107 (890-7492-9), SS 290 (890-7492-10), SS 339 (890-7492-11) and SS 495 (890-7492-12). Elevated reporting limits (RLs) are provided.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 46 (890-7492-8), SS 290 (890-7492-10) and SS 495 (890-7492-12). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8021B: The following sample was diluted due to the nature of the sample matrix: SS 504 (890-7492-15). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

acceptance limits.

Method 8015MOD_NM: Surrogate recovery for the following sample was outside control limits: SS 262 (890-7492-5). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: Due to the high concentration of Diesel Range Organics (Over C10-C28), the matrix spike (MS) for preparation batch 880-98403 and analytical batch 880-98427 could not be evaluated for accuracy. The associated matrix spike duplicate (MSD) met acceptance criteria.

Method 8015MOD_NM: Surrogate recovery for the following samples were outside control limits: SS 477 (890-7492-20), (LCS 880-98403/2-A) and (LCSD 880-98403/3-A). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The method blank for preparation batch 880-98404 and analytical batch 880-98430 contained Diesel Range Organics (Over C10-C28) above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 8015MOD_NM: An incorrect volume of surrogate spiking solution was inadvertently added the following samples: (LCS 880-98404/2-A) and (LCSD 880-98404/3-A). Percent recoveries are based on the amount spiked.

Method 8015MOD_NM: The laboratory control sample (LCS) associated with preparation batch 880-98404 and analytical batch 880-98430 was outside acceptance criteria. Re-extraction and/or re-analysis could not be performed; therefore, the data have been reported. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits and may be used to evaluate matrix performance.

Method 8015MOD_NM: The laboratory control sample (LCS) for preparation batch 880-98403 and analytical batch 880-98427 recovered outside control limits for the following analytes: Gasoline Range Organics (GRO)-C6-C10. Since only an acceptable LCSD is required per the method, the LCSD shows recovery for the batch and the data has been qualified and reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

Method 300_ORGFM_28D - Soluble: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-98374 and analytical batch 880-98376 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 12/19/2024 3:45 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.0°C.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 398 (890-7492-16) and SS 200 (890-7492-18). Evidence of matrix interferences is not obvious.

Method 8021B: Surrogate recovery for the following sample was outside control limits: SS 176 (890-7492-21). Evidence of matrix interferences is not obvious.

Method 8021B: The following samples were diluted due to the nature of the sample matrix: SS 488 (890-7492-7), SS 46 (890-7492-8), SS 107 (890-7492-9), SS 290 (890-7492-10), SS 339 (890-7492-11) and SS 495 (890-7492-12). Elevated reporting limits (RLs) are provided.

Method 8021B: The following sample was diluted due to the nature of the sample matrix: SS 504 (890-7492-15). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

acceptance limits.

Method 8015MOD_NM: Surrogate recovery for the following sample was outside control limits: SS 262 (890-7492-5). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: Due to the high concentration of Diesel Range Organics (Over C10-C28), the matrix spike (MS) for preparation batch 880-98403 and analytical batch 880-98427 could not be evaluated for accuracy. The associated matrix spike duplicate (MSD) met acceptance criteria.

Method 8015MOD_NM: Surrogate recovery for the following samples were outside control limits: SS 477 (890-7492-20), (LCS 880-98403/2-A) and (LCSD 880-98403/3-A). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The method blank for preparation batch 880-98404 and analytical batch 880-98430 contained Diesel Range Organics (Over C10-C28) above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 8015MOD_NM: An incorrect volume of surrogate spiking solution was inadvertently added the following samples: (LCS 880-98404/2-A) and (LCSD 880-98404/3-A). Percent recoveries are based on the amount spiked.

Method 8015MOD_NM: The laboratory control sample (LCS) associated with preparation batch 880-98404 and analytical batch 880-98430 was outside acceptance criteria. Re-extraction and/or re-analysis could not be performed; therefore, the data have been reported. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits and may be used to evaluate matrix performance.

Method 8015MOD_NM: The laboratory control sample (LCS) for preparation batch 880-98403 and analytical batch 880-98427 recovered outside control limits for the following analytes: Gasoline Range Organics (GRO)-C6-C10. Since only an acceptable LCSD is required per the method, the LCSD shows recovery for the batch and the data has been qualified and reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

Method 300_ORGFM_28D - Soluble: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-98374 and analytical batch 880-98376 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative 890-7492-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 12/19/2024 3:45 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.0°C.

Receipt Exceptions

The following samples were received and analyzed from an unpreserved bulk soil jar: SS 01 (890-7492-1), SS 20 (890-7492-2), SS 64 (890-7492-3), SS 80 (890-7492-4), SS 262 (890-7492-5), SS 320 (890-7492-6), SS 488 (890-7492-7), SS 46 (890-7492-8), SS 107 (890-7492-9), SS 290 (890-7492-10), SS 339 (890-7492-11), SS 495 (890-7492-12), SS 129 (890-7492-13), SS 154 (890-7492-14), SS 504 (890-7492-15), SS 398 (890-7492-16), SS 183 (890-7492-17), SS 200 (890-7492-18), SS 435 (890-7492-19), SS 477 (890-7492-20), SS 176 (890-7492-21), SS 138 (890-7492-22) and SS 420 (890-7492-23).

GC VOA

Method 8021B: The following samples were diluted due to physical characteristics such as color, odor, appearance, viscosity, etc.>>: SS 01 (890-7492-1), SS 20 (890-7492-2), SS 80 (890-7492-4), SS 262 (890-7492-5) and SS 320 (890-7492-6). Elevated reporting limits (RL) are provided.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 01 (890-7492-1), SS 20 (890-7492-2) and SS 64 (890-7492-3). Evidence of matrix interferences is not obvious.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 398 (890-7492-16) and SS 200 (890-7492-18). Evidence of matrix interferences is not obvious.

Method 8021B: Surrogate recovery for the following sample was outside control limits: SS 176 (890-7492-21). Evidence of matrix interferences is not obvious.

Method 8021B: The following samples were diluted due to the nature of the sample matrix: SS 488 (890-7492-7), SS 46 (890-7492-8), SS 107 (890-7492-9), SS 290 (890-7492-10), SS 339 (890-7492-11) and SS 495 (890-7492-12). Elevated reporting limits (RLs) are provided.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 46 (890-7492-8), SS 290 (890-7492-10) and SS 495 (890-7492-12). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8021B: The following sample was diluted due to the nature of the sample matrix: SS 504 (890-7492-15). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Method 8015MOD_NM: Surrogate recovery for the following sample was outside control limits: (LCSD 880-98402/3-A). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-98402 and analytical batch 880-98425 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within

acceptance limits.

Method 8015MOD_NM: Surrogate recovery for the following sample was outside control limits: SS 262 (890-7492-5). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: Due to the high concentration of Diesel Range Organics (Over C10-C28), the matrix spike (MS) for preparation batch 880-98403 and analytical batch 880-98427 could not be evaluated for accuracy. The associated matrix spike duplicate (MSD) met acceptance criteria.

Method 8015MOD_NM: Surrogate recovery for the following samples were outside control limits: SS 477 (890-7492-20), (LCS 880-98403/2-A) and (LCSD 880-98403/3-A). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The method blank for preparation batch 880-98404 and analytical batch 880-98430 contained Diesel Range Organics (Over C10-C28) above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 8015MOD_NM: An incorrect volume of surrogate spiking solution was inadvertently added the following samples: (LCS 880-98404/2-A) and (LCSD 880-98404/3-A). Percent recoveries are based on the amount spiked.

Method 8015MOD_NM: The laboratory control sample (LCS) associated with preparation batch 880-98404 and analytical batch 880-98430 was outside acceptance criteria. Re-extraction and/or re-analysis could not be performed; therefore, the data have been reported. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits and may be used to evaluate matrix performance.

Method 8015MOD_NM: The laboratory control sample (LCS) for preparation batch 880-98403 and analytical batch 880-98427 recovered outside control limits for the following analytes: Gasoline Range Organics (GRO)-C6-C10. Since only an acceptable LCSD is required per the method, the LCSD shows recovery for the batch and the data has been qualified and reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

Method 300_ORGFM_28D - Soluble: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-98374 and analytical batch 880-98376 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 12/19/2024 3:45 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.0°C.

Receipt Exceptions

The following samples were received and analyzed from an unpreserved bulk soil jar: SS 01 (890-7492-1), SS 20 (890-7492-2), SS 64 (890-7492-3), SS 80 (890-7492-4), SS 262 (890-7492-5), SS 320 (890-7492-6), SS 488 (890-7492-7), SS 46 (890-7492-8), SS 107 (890-7492-9), SS 290 (890-7492-10), SS 339 (890-7492-11), SS 495 (890-7492-12), SS 129 (890-7492-13), SS 154 (890-7492-14), SS 504 (890-7492-15), SS 398 (890-7492-16), SS 183 (890-7492-17), SS 200 (890-7492-18), SS 435 (890-7492-19), SS 477 (890-7492-20), SS 176 (890-7492-21), SS 138 (890-7492-22) and SS 420 (890-7492-23).

Method 8021B: The following samples were diluted due to physical characteristics such as color, odor, appearance, viscosity, etc. >>: SS 01 (890-7492-1), SS 20 (890-7492-2), SS 80 (890-7492-4), SS 262 (890-7492-5) and SS 320 (890-7492-6). Elevated reporting limits (RL) are provided.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 01 (890-7492-1), SS 20 (890-7492-2) and SS 64 (890-7492-3). Evidence of matrix interferences is not obvious.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 398 (890-7492-16) and SS 200 (890-7492-18). Evidence of matrix interferences is not obvious.

Method 8021B: Surrogate recovery for the following sample was outside control limits: SS 176 (890-7492-21). Evidence of matrix interferences is not obvious.

Method 8021B: The following samples were diluted due to the nature of the sample matrix: SS 488 (890-7492-7), SS 46 (890-7492-8), SS 107 (890-7492-9), SS 290 (890-7492-10), SS 339 (890-7492-11) and SS 495 (890-7492-12). Elevated reporting limits (RLs) are provided.

Method 8021B: The following sample was diluted due to the nature of the sample matrix: SS 504 (890-7492-15). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

acceptance limits.

Method 8015MOD_NM: Surrogate recovery for the following sample was outside control limits: SS 262 (890-7492-5). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: Due to the high concentration of Diesel Range Organics (Over C10-C28), the matrix spike (MS) for preparation batch 880-98403 and analytical batch 880-98427 could not be evaluated for accuracy. The associated matrix spike duplicate (MSD) met acceptance criteria.

Method 8015MOD_NM: Surrogate recovery for the following samples were outside control limits: SS 477 (890-7492-20), (LCS 880-98403/2-A) and (LCSD 880-98403/3-A). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The method blank for preparation batch 880-98404 and analytical batch 880-98430 contained Diesel Range Organics (Over C10-C28) above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 8015MOD_NM: An incorrect volume of surrogate spiking solution was inadvertently added the following samples: (LCS 880-98404/2-A) and (LCSD 880-98404/3-A). Percent recoveries are based on the amount spiked.

Method 8015MOD_NM: The laboratory control sample (LCS) associated with preparation batch 880-98404 and analytical batch 880-98430 was outside acceptance criteria. Re-extraction and/or re-analysis could not be performed; therefore, the data have been reported. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits and may be used to evaluate matrix performance.

Method 8015MOD_NM: The laboratory control sample (LCS) for preparation batch 880-98403 and analytical batch 880-98427 recovered outside control limits for the following analytes: Gasoline Range Organics (GRO)-C6-C10. Since only an acceptable LCSD is required per the method, the LCSD shows recovery for the batch and the data has been qualified and reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

Method 300_ORGFM_28D - Soluble: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-98374 and analytical batch 880-98376 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 398 (890-7492-16) and SS 200 (890-7492-18). Evidence of matrix interferences is not obvious.

Method 8021B: Surrogate recovery for the following sample was outside control limits: SS 176 (890-7492-21). Evidence of matrix interferences is not obvious.

Method 8021B: The following samples were diluted due to the nature of the sample matrix: SS 488 (890-7492-7), SS 46 (890-7492-8), SS 107 (890-7492-9), SS 290 (890-7492-10), SS 339 (890-7492-11) and SS 495 (890-7492-12). Elevated reporting limits (RLs) are provided.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 46 (890-7492-8), SS 290 (890-7492-10) and SS 495 (890-7492-12). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8021B: The following sample was diluted due to the nature of the sample matrix: SS 504 (890-7492-15). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

acceptance limits.

Method 8015MOD_NM: Surrogate recovery for the following sample was outside control limits: SS 262 (890-7492-5). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: Due to the high concentration of Diesel Range Organics (Over C10-C28), the matrix spike (MS) for preparation batch 880-98403 and analytical batch 880-98427 could not be evaluated for accuracy. The associated matrix spike duplicate (MSD) met acceptance criteria.

Method 8015MOD_NM: Surrogate recovery for the following samples were outside control limits: SS 477 (890-7492-20), (LCS 880-98403/2-A) and (LCSD 880-98403/3-A). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The method blank for preparation batch 880-98404 and analytical batch 880-98430 contained Diesel Range Organics (Over C10-C28) above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 8015MOD_NM: An incorrect volume of surrogate spiking solution was inadvertently added the following samples: (LCS 880-98404/2-A) and (LCSD 880-98404/3-A). Percent recoveries are based on the amount spiked.

Method 8015MOD_NM: The laboratory control sample (LCS) associated with preparation batch 880-98404 and analytical batch 880-98430 was outside acceptance criteria. Re-extraction and/or re-analysis could not be performed; therefore, the data have been reported. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits and may be used to evaluate matrix performance.

Method 8015MOD_NM: The laboratory control sample (LCS) for preparation batch 880-98403 and analytical batch 880-98427 recovered outside control limits for the following analytes: Gasoline Range Organics (GRO)-C6-C10. Since only an acceptable LCSD is required per the method, the LCSD shows recovery for the batch and the data has been qualified and reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

Method 300_ORGFM_28D - Soluble: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-98374 and analytical batch 880-98376 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative
890-7526-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 12/31/2024 3:30 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.2°C.

Receipt Exceptions

The following samples were received and analyzed from an unpreserved bulk soil jar: SS 424 @ 1.5' - 2' (890-7526-1), SS 398 @ 1.5' - 2' (890-7526-2), SS 379 @ 1.5' - 2' (890-7526-3), SS 288 @ 1.5' - 2' (890-7526-4), SS 393 @ 1.5' - 2' (890-7526-5), SS 497 @ 1.5' - 2' (890-7526-6) and SS 488 @ 1.5' - 2' (890-7526-7).

GC VOA

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics

Method 8015MOD_NM: An incorrect volume of surrogate spiking solution was inadvertently added the following samples: SS 393 @ 1.5' - 2' (890-7526-5) and (880-52714-A-21-B). Percent recoveries are based on the amount spiked.

Method 8015MOD_NM: Surrogate recovery for the following samples were outside control limits: SS 497 @ 1.5' - 2' (890-7526-6), (880-52714-A-21-C MS) and (880-52714-A-21-D MSD). Evidence of matrix interferences is not obvious.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

Method 300_ORGFM_28D - Soluble: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-99275 and analytical batch 880-99276 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

The associated samples are: SS 424 @ 1.5' - 2' (890-7526-1), SS 398 @ 1.5' - 2' (890-7526-2), SS 379 @ 1.5' - 2' (890-7526-3), SS 288 @ 1.5' - 2' (890-7526-4), SS 393 @ 1.5' - 2' (890-7526-5), SS 497 @ 1.5' - 2' (890-7526-6), SS 488 @ 1.5' - 2' (890-7526-7), (890-7526-A-1-F MS) and (890-7526-A-1-G MSD).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative 890-7530-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 1/3/2025 3:45 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.0°C.

Receipt Exceptions

The following samples were received and analyzed from an unpreserved bulk soil jar: SS 481 @ 1.5' - 2' (890-7530-1), SS 506 @ 1.5' - 2' (890-7530-2), SS 410 @ 1.5' - 2' (890-7530-3), SS 609 @ 1.5' - 2' (890-7530-4), SS 606 @ 1.5' - 2' (890-7530-5), SS 604 @ 1.5' - 2' (890-7530-6), SS 591 @ 1.5' - 2' (890-7530-7), SS 320 @ 1.5' - 2' (890-7530-8), SS 308 @ 1.5' - 2' (890-7530-9) and SS 321 @ 1.5' - 2' (890-7530-10).

GC VOA

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics

Method 8015MOD_NM: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 880-99555 and analytical batch 880-99516 recovered outside control limits for the following analytes: Gasoline Range Organics (GRO)-C6-C10 and Diesel Range Organics (Over C10-C28).

Method 8015MOD_NM: An incorrect volume of surrogate spiking solution was inadvertently added the following samples: SS 604 @ 1.5' - 2' (890-7530-6) and SS 320 @ 1.5' - 2' (890-7530-8). Percent recoveries are based on the amount spiked.

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 12/19/2024 3:45 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.0°C.

Receipt Exceptions

The following samples were received and analyzed from an unpreserved bulk soil jar: SS 01 (890-7492-1), SS 20 (890-7492-2), SS 64 (890-7492-3), SS 80 (890-7492-4), SS 262 (890-7492-5), SS 320 (890-7492-6), SS 488 (890-7492-7), SS 46 (890-7492-8), SS 107 (890-7492-9), SS 290 (890-7492-10), SS 339 (890-7492-11), SS 495 (890-7492-12), SS 129 (890-7492-13), SS 154 (890-7492-14), SS 504 (890-7492-15), SS 398 (890-7492-16), SS 183 (890-7492-17), SS 200 (890-7492-18), SS 435 (890-7492-19), SS 477 (890-7492-20), SS 176 (890-7492-21), SS 138 (890-7492-22) and SS 420 (890-7492-23).

GC VOA

Method 8021B: The following samples were diluted due to physical characteristics such as color, odor, appearance, viscosity, etc. >>: SS 01 (890-7492-1), SS 20 (890-7492-2), SS 80 (890-7492-4), SS 262 (890-7492-5) and SS 320 (890-7492-6). Elevated reporting limits (RL) are provided.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 01 (890-7492-1), SS 20 (890-7492-2) and SS 64 (890-7492-3). Evidence of matrix interferences is not obvious.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 398 (890-7492-16) and SS 200 (890-7492-18). Evidence of matrix interferences is not obvious.

Method 8021B: Surrogate recovery for the following sample was outside control limits: SS 176 (890-7492-21). Evidence of matrix interferences is not obvious.

Method 8021B: The following samples were diluted due to the nature of the sample matrix: SS 488 (890-7492-7), SS 46 (890-7492-8), SS 107 (890-7492-9), SS 290 (890-7492-10), SS 339 (890-7492-11) and SS 495 (890-7492-12). Elevated reporting limits (RLs) are provided.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 46 (890-7492-8), SS 290 (890-7492-10) and SS 495 (890-7492-12). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8021B: The following sample was diluted due to the nature of the sample matrix: SS 504 (890-7492-15). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Method 8015MOD_NM: Surrogate recovery for the following sample was outside control limits: (LCSD 880-98402/3-A). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-98402 and analytical batch 880-98425 were outside control limits for one or more analytes. acceptance limits.

Method 8015MOD_NM: Surrogate recovery for the following sample was outside control limits: SS 262 (890-7492-5). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: Due to the high concentration of Diesel Range Organics (Over C10-C28), the matrix spike (MS) for preparation batch 880-98403 and analytical batch 880-98427 could not be evaluated for accuracy. The associated matrix spike duplicate (MSD) met acceptance criteria.

Method 8015MOD_NM: Surrogate recovery for the following samples were outside control limits: SS 477 (890-7492-20), (LCS 880-98403/2-A) and (LCSD 880-98403/3-A). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The method blank for preparation batch 880-98404 and analytical batch 880-98430 contained Diesel Range Organics (Over C10-C28) above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 8015MOD_NM: An incorrect volume of surrogate spiking solution was inadvertently added the following samples: (LCS 880-98404/2-A) and (LCSD 880-98404/3-A). Percent recoveries are based on the amount spiked.

Method 8015MOD_NM: The laboratory control sample (LCS) associated with preparation batch 880-98404 and analytical batch 880-98430 was outside acceptance criteria. Re-extraction and/or re-analysis could not be performed; therefore, the data have been reported. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits and may be used to evaluate matrix performance.

Method 8015MOD_NM: The laboratory control sample (LCS) for preparation batch 880-98403 and analytical batch 880-98427 recovered outside control limits for the following analytes: Gasoline Range Organics (GRO)-C6-C10. Since only an acceptable LCSD is required per the method, the LCSD shows recovery for the batch and the data has been qualified and reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

Method 300_ORGFM_28D - Soluble: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-98374 and analytical batch 880-98376 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative 890-7544-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 1/7/2025 3:20 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 3.8°C.

Receipt Exceptions

The following samples were received and analyzed from an unpreserved bulk soil jar: SS 79 @ 2' (890-7544-1), SS 82 @ 2' (890-7544-2), SS 115 @ 2' (890-7544-3) and SS 89 @ 2' (890-7544-4).

GC VOA

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics

Method 8015MOD_NM: An incorrect volume of surrogate spiking solution was inadvertently added the following samples: SS 79 @ 2' (890-7544-1). Percent recoveries are based on the amount spiked.

Method 8015MOD_NM: An incorrect volume of surrogate spiking solution was inadvertently added the following samples: SS 115 @ 2' (890-7544-3), SS 89 @ 2' (890-7544-4) and (890-7529-A-19-C). Percent recoveries are based on the amount spiked.

Method 8015MOD_NM: Surrogate recovery for the following sample was outside control limits: (LCSD 880-99723/3-A). Evidence of matrix interferences is not obvious.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative 890-7492-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 12/19/2024 3:45 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.0°C.

Receipt Exceptions

The following samples were received and analyzed from an unpreserved bulk soil jar: SS 01 (890-7492-1), SS 20 (890-7492-2), SS 64 (890-7492-3), SS 80 (890-7492-4), SS 262 (890-7492-5), SS 320 (890-7492-6), SS 488 (890-7492-7), SS 46 (890-7492-8), SS 107 (890-7492-9), SS 290 (890-7492-10), SS 339 (890-7492-11), SS 495 (890-7492-12), SS 129 (890-7492-13), SS 154 (890-7492-14), SS 504 (890-7492-15), SS 398 (890-7492-16), SS 183 (890-7492-17), SS 200 (890-7492-18), SS 435 (890-7492-19), SS 477 (890-7492-20), SS 176 (890-7492-21), SS 138 (890-7492-22) and SS 420 (890-7492-23).

GC VOA

Method 8021B: The following samples were diluted due to physical characteristics such as color, odor, appearance, viscosity, etc. >>: SS 01 (890-7492-1), SS 20 (890-7492-2), SS 80 (890-7492-4), SS 262 (890-7492-5) and SS 320 (890-7492-6). Elevated reporting limits (RL) are provided.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 01 (890-7492-1), SS 20 (890-7492-2) and SS 64 (890-7492-3). Evidence of matrix interferences is not obvious.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 398 (890-7492-16) and SS 200 (890-7492-18). Evidence of matrix interferences is not obvious.

Method 8021B: Surrogate recovery for the following sample was outside control limits: SS 176 (890-7492-21). Evidence of matrix interferences is not obvious.

Method 8021B: The following samples were diluted due to the nature of the sample matrix: SS 488 (890-7492-7), SS 46 (890-7492-8), SS 107 (890-7492-9), SS 290 (890-7492-10), SS 339 (890-7492-11) and SS 495 (890-7492-12). Elevated reporting limits (RLs) are provided.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 46 (890-7492-8), SS 290 (890-7492-10) and SS 495 (890-7492-12). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8021B: The following sample was diluted due to the nature of the sample matrix: SS 504 (890-7492-15). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics

Method 8015MOD_NM: Surrogate recovery for the following sample was outside control limits: (LCSD 880-98402/3-A). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-98402 and analytical batch 880-98425 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within

acceptance limits.

Method 8015MOD_NM: Surrogate recovery for the following sample was outside control limits: SS 262 (890-7492-5). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: Due to the high concentration of Diesel Range Organics (Over C10-C28), the matrix spike (MS) for preparation batch 880-98403 and analytical batch 880-98427 could not be evaluated for accuracy. The associated matrix spike duplicate (MSD) met acceptance criteria.

Method 8015MOD_NM: Surrogate recovery for the following samples were outside control limits: SS 477 (890-7492-20), (LCS 880-98403/2-A) and (LCSD 880-98403/3-A). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The method blank for preparation batch 880-98404 and analytical batch 880-98430 contained Diesel Range Organics (Over C10-C28) above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 8015MOD_NM: An incorrect volume of surrogate spiking solution was inadvertently added the following samples: (LCS 880-98404/2-A) and (LCSD 880-98404/3-A). Percent recoveries are based on the amount spiked.

Method 8015MOD_NM: The laboratory control sample (LCS) associated with preparation batch 880-98404 and analytical batch 880-98430 was outside acceptance criteria. Re-extraction and/or re-analysis could not be performed; therefore, the data have been reported. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits and may be used to evaluate matrix performance.

Method 8015MOD_NM: The laboratory control sample (LCS) for preparation batch 880-98403 and analytical batch 880-98427 recovered outside control limits for the following analytes: Gasoline Range Organics (GRO)-C6-C10. Since only an acceptable LCSD is required per the method, the LCSD shows recovery for the batch and the data has been qualified and reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

Method 300_ORGFM_28D - Soluble: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-98374 and analytical batch 880-98376 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 12/19/2024 3:45 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.0°C.

Receipt Exceptions

The following samples were received and analyzed from an unpreserved bulk soil jar: SS 01 (890-7492-1), SS 20 (890-7492-2), SS 64 (890-7492-3), SS 80 (890-7492-4), SS 262 (890-7492-5), SS 320 (890-7492-6), SS 488 (890-7492-7), SS 46 (890-7492-8), SS 107 (890-7492-9), SS 290 (890-7492-10), SS 339 (890-7492-11), SS 495 (890-7492-12), SS 129 (890-7492-13), SS 154 (890-7492-14), SS 504 (890-7492-15), SS 398 (890-7492-16), SS 183 (890-7492-17), SS 200 (890-7492-18), SS 435 (890-7492-19), SS 477 (890-7492-20), SS 176 (890-7492-21), SS 138 (890-7492-22) and SS 420 (890-7492-23).

GC VOA

Method 8021B: The following samples were diluted due to physical characteristics such as color, odor, appearance, viscosity, etc. >>: SS 01 (890-7492-1), SS 20 (890-7492-2), SS 80 (890-7492-4), SS 262 (890-7492-5) and SS 320 (890-7492-6). Elevated reporting limits (RL) are provided.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 01 (890-7492-1), SS 20 (890-7492-2) and SS 64 (890-7492-3). Evidence of matrix interferences is not obvious.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 398 (890-7492-16) and SS 200 (890-7492-18). Evidence of matrix interferences is not obvious.

Method 8021B: Surrogate recovery for the following sample was outside control limits: SS 176 (890-7492-21). Evidence of matrix interferences is not obvious.

Method 8021B: The following samples were diluted due to the nature of the sample matrix: SS 488 (890-7492-7), SS 46 (890-7492-8), SS 107 (890-7492-9), SS 290 (890-7492-10), SS 339 (890-7492-11) and SS 495 (890-7492-12). Elevated reporting limits (RLs) are provided.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 46 (890-7492-8), SS 290 (890-7492-10) and SS 495 (890-7492-12). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8021B: The following sample was diluted due to the nature of the sample matrix: SS 504 (890-7492-15). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

acceptance limits.

Method 8015MOD_NM: Surrogate recovery for the following sample was outside control limits: SS 262 (890-7492-5). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: Due to the high concentration of Diesel Range Organics (Over C10-C28), the matrix spike (MS) for preparation batch 880-98403 and analytical batch 880-98427 could not be evaluated for accuracy. The associated matrix spike duplicate (MSD) met acceptance criteria.

Method 8015MOD_NM: Surrogate recovery for the following samples were outside control limits: SS 477 (890-7492-20), (LCS 880-98403/2-A) and (LCSD 880-98403/3-A). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The method blank for preparation batch 880-98404 and analytical batch 880-98430 contained Diesel Range Organics (Over C10-C28) above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 8015MOD_NM: An incorrect volume of surrogate spiking solution was inadvertently added the following samples: (LCS 880-98404/2-A) and (LCSD 880-98404/3-A). Percent recoveries are based on the amount spiked.

Method 8015MOD_NM: The laboratory control sample (LCS) associated with preparation batch 880-98404 and analytical batch 880-98430 was outside acceptance criteria. Re-extraction and/or re-analysis could not be performed; therefore, the data have been reported. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits and may be used to evaluate matrix performance.

Method 8015MOD_NM: The laboratory control sample (LCS) for preparation batch 880-98403 and analytical batch 880-98427 recovered outside control limits for the following analytes: Gasoline Range Organics (GRO)-C6-C10. Since only an acceptable LCSD is required per the method, the LCSD shows recovery for the batch and the data has been qualified and reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

Method 300_ORGFM_28D - Soluble: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-98374 and analytical batch 880-98376 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 12/19/2024 3:45 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.0°C.

Receipt Exceptions

The following samples were received and analyzed from an unpreserved bulk soil jar: SS 01 (890-7492-1), SS 20 (890-7492-2), SS 64 (890-7492-3), SS 80 (890-7492-4), SS 262 (890-7492-5), SS 320 (890-7492-6), SS 488 (890-7492-7), SS 46 (890-7492-8), SS 107 (890-7492-9), SS 290 (890-7492-10), SS 339 (890-7492-11), SS 495 (890-7492-12), SS 129 (890-7492-13), SS 154 (890-7492-14), SS 504 (890-7492-15), SS 398 (890-7492-16), SS 183 (890-7492-17), SS 200 (890-7492-18), SS 435 (890-7492-19), SS 477 (890-7492-20), SS 176 (890-7492-21), SS 138 (890-7492-22) and SS 420 (890-7492-23).

Method 8021B: The following samples were diluted due to physical characteristics such as color, odor, appearance, viscosity, etc. >>: SS 01 (890-7492-1), SS 20 (890-7492-2), SS 80 (890-7492-4), SS 262 (890-7492-5) and SS 320 (890-7492-6). Elevated reporting limits (RL) are provided.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 01 (890-7492-1), SS 20 (890-7492-2) and SS 64 (890-7492-3). Evidence of matrix interferences is not obvious.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 398 (890-7492-16) and SS 200 (890-7492-18). Evidence of matrix interferences is not obvious.

Method 8021B: Surrogate recovery for the following sample was outside control limits: SS 176 (890-7492-21). Evidence of matrix interferences is not obvious.

Method 8021B: The following samples were diluted due to the nature of the sample matrix: SS 488 (890-7492-7), SS 46 (890-7492-8), SS 107 (890-7492-9), SS 290 (890-7492-10), SS 339 (890-7492-11) and SS 495 (890-7492-12). Elevated reporting limits (RLs) are provided.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 46 (890-7492-8), SS 290 (890-7492-10) and SS 495 (890-7492-12). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8021B: The following sample was diluted due to the nature of the sample matrix: SS 504 (890-7492-15). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

acceptance limits.

Method 8015MOD_NM: Surrogate recovery for the following sample was outside control limits: SS 262 (890-7492-5). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: Due to the high concentration of Diesel Range Organics (Over C10-C28), the matrix spike (MS) for preparation batch 880-98403 and analytical batch 880-98427 could not be evaluated for accuracy. The associated matrix spike duplicate (MSD) met acceptance criteria.

Method 8015MOD_NM: Surrogate recovery for the following samples were outside control limits: SS 477 (890-7492-20), (LCS 880-98403/2-A) and (LCSD 880-98403/3-A). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The method blank for preparation batch 880-98404 and analytical batch 880-98430 contained Diesel Range Organics (Over C10-C28) above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 8015MOD_NM: An incorrect volume of surrogate spiking solution was inadvertently added the following samples: (LCS 880-98404/2-A) and (LCSD 880-98404/3-A). Percent recoveries are based on the amount spiked.

Method 8015MOD_NM: The laboratory control sample (LCS) associated with preparation batch 880-98404 and analytical batch 880-98430 was outside acceptance criteria. Re-extraction and/or re-analysis could not be performed; therefore, the data have been reported. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits and may be used to evaluate matrix performance.

Method 8015MOD_NM: The laboratory control sample (LCS) for preparation batch 880-98403 and analytical batch 880-98427 recovered outside control limits for the following analytes: Gasoline Range Organics (GRO)-C6-C10. Since only an acceptable LCSD is required per the method, the LCSD shows recovery for the batch and the data has been qualified and reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

Method 300_ORGFM_28D - Soluble: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-98374 and analytical batch 880-98376 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative 890-7571-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 1/14/2025 3:30 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.2°C.

Receipt Exceptions

The following samples were received and analyzed from an unpreserved bulk soil jar: SS 310 @ 2' (890-7571-1), SS 311 @ 2' (890-7571-2), SS 316 @ 2' (890-7571-3), SS 317 @ 2' (890-7571-4), SS 313 @ 2' (890-7571-5), SS 319 @ 2' (890-7571-6), SS 318 @ 2' (890-7571-7) and SS 329 @ 2' (890-7571-8).

GC VOA

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics

Method 8015MOD_NM: The continuing calibration verification (CCV) associated with batch 880-100312 recovered above the upper control limit for Diesel Range Organics (Over C10-C28). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8015MOD_NM: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 880-100288 and analytical batch 880-100312 recovered outside control limits for the following analytes: Gasoline Range Organics (GRO)-C6-C10 and Diesel Range Organics (Over C10-C28).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative 890-7492-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 12/19/2024 3:45 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.0°C.

Receipt Exceptions

The following samples were received and analyzed from an unpreserved bulk soil jar: SS 01 (890-7492-1), SS 20 (890-7492-2), SS 64 (890-7492-3), SS 80 (890-7492-4), SS 262 (890-7492-5), SS 320 (890-7492-6), SS 488 (890-7492-7), SS 46 (890-7492-8), SS 107 (890-7492-9), SS 290 (890-7492-10), SS 339 (890-7492-11), SS 495 (890-7492-12), SS 129 (890-7492-13), SS 154 (890-7492-14), SS 504 (890-7492-15), SS 398 (890-7492-16), SS 183 (890-7492-17), SS 200 (890-7492-18), SS 435 (890-7492-19), SS 477 (890-7492-20), SS 176 (890-7492-21), SS 138 (890-7492-22) and SS 420 (890-7492-23).

GC VOA

Method 8021B: The following samples were diluted due to physical characteristics such as color, odor, appearance, viscosity, etc. >>: SS 01 (890-7492-1), SS 20 (890-7492-2), SS 80 (890-7492-4), SS 262 (890-7492-5) and SS 320 (890-7492-6). Elevated reporting limits (RL) are provided.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 01 (890-7492-1), SS 20 (890-7492-2) and SS 64 (890-7492-3). Evidence of matrix interferences is not obvious.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 398 (890-7492-16) and SS 200 (890-7492-18). Evidence of matrix interferences is not obvious.

Method 8021B: Surrogate recovery for the following sample was outside control limits: SS 176 (890-7492-21). Evidence of matrix interferences is not obvious.

Method 8021B: The following samples were diluted due to the nature of the sample matrix: SS 488 (890-7492-7), SS 46 (890-7492-8), SS 107 (890-7492-9), SS 290 (890-7492-10), SS 339 (890-7492-11) and SS 495 (890-7492-12). Elevated reporting limits (RLs) are provided.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 46 (890-7492-8), SS 290 (890-7492-10) and SS 495 (890-7492-12). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8021B: The following sample was diluted due to the nature of the sample matrix: SS 504 (890-7492-15). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Method 8015MOD_NM: Surrogate recovery for the following sample was outside control limits: (LCSD 880-98402/3-A). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-98402 and analytical batch 880-98425 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within

acceptance limits.

Method 8015MOD_NM: Surrogate recovery for the following sample was outside control limits: SS 262 (890-7492-5). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: Due to the high concentration of Diesel Range Organics (Over C10-C28), the matrix spike (MS) for preparation batch 880-98403 and analytical batch 880-98427 could not be evaluated for accuracy. The associated matrix spike duplicate (MSD) met acceptance criteria.

Method 8015MOD_NM: Surrogate recovery for the following samples were outside control limits: SS 477 (890-7492-20), (LCS 880-98403/2-A) and (LCSD 880-98403/3-A). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The method blank for preparation batch 880-98404 and analytical batch 880-98430 contained Diesel Range Organics (Over C10-C28) above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 8015MOD_NM: An incorrect volume of surrogate spiking solution was inadvertently added the following samples: (LCS 880-98404/2-A) and (LCSD 880-98404/3-A). Percent recoveries are based on the amount spiked.

Method 8015MOD_NM: The laboratory control sample (LCS) associated with preparation batch 880-98404 and analytical batch 880-98430 was outside acceptance criteria. Re-extraction and/or re-analysis could not be performed; therefore, the data have been reported. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits and may be used to evaluate matrix performance.

Method 8015MOD_NM: The laboratory control sample (LCS) for preparation batch 880-98403 and analytical batch 880-98427 recovered outside control limits for the following analytes: Gasoline Range Organics (GRO)-C6-C10. Since only an acceptable LCSD is required per the method, the LCSD shows recovery for the batch and the data has been qualified and reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

Method 300_ORGFM_28D - Soluble: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-98374 and analytical batch 880-98376 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 12/19/2024 3:45 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.0°C.

Receipt Exceptions

The following samples were received and analyzed from an unpreserved bulk soil jar: SS 01 (890-7492-1), SS 20 (890-7492-2), SS 64 (890-7492-3), SS 80 (890-7492-4), SS 262 (890-7492-5), SS 320 (890-7492-6), SS 488 (890-7492-7), SS 46 (890-7492-8), SS 107 (890-7492-9), SS 290 (890-7492-10), SS 339 (890-7492-11), SS 495 (890-7492-12), SS 129 (890-7492-13), SS 154 (890-7492-14), SS 504 (890-7492-15), SS 398 (890-7492-16), SS 183 (890-7492-17), SS 200 (890-7492-18), SS 435 (890-7492-19), SS 477 (890-7492-20), SS 176 (890-7492-21), SS 138 (890-7492-22) and SS 420 (890-7492-23).

GC VOA

Method 8021B: The following samples were diluted due to physical characteristics such as color, odor, appearance, viscosity, etc. >>: SS 01 (890-7492-1), SS 20 (890-7492-2), SS 80 (890-7492-4), SS 262 (890-7492-5) and SS 320 (890-7492-6). Elevated reporting limits (RL) are provided.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 01 (890-7492-1), SS 20 (890-7492-2) and SS 64 (890-7492-3). Evidence of matrix interferences is not obvious.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 398 (890-7492-16) and SS 200 (890-7492-18). Evidence of matrix interferences is not obvious.

Method 8021B: Surrogate recovery for the following sample was outside control limits: SS 176 (890-7492-21). Evidence of matrix interferences is not obvious.

Method 8021B: The following samples were diluted due to the nature of the sample matrix: SS 488 (890-7492-7), SS 46 (890-7492-8), SS 107 (890-7492-9), SS 290 (890-7492-10), SS 339 (890-7492-11) and SS 495 (890-7492-12). Elevated reporting limits (RLs) are provided.

Method 8021B: Surrogate recovery for the following samples were outside control limits: SS 46 (890-7492-8), SS 290 (890-7492-10) and SS 495 (890-7492-12). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8021B: The following sample was diluted due to the nature of the sample matrix: SS 504 (890-7492-15). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Method 8015MOD_NM: Surrogate recovery for the following sample was outside control limits: (LCSD 880-98402/3-A). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-98402 and analytical batch 880-98425 were outside control limits for one or more analytes. acceptance limits.

Method 8015MOD_NM: Surrogate recovery for the following sample was outside control limits: SS 262 (890-7492-5). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: Due to the high concentration of Diesel Range Organics (Over C10-C28), the matrix spike (MS) for preparation batch 880-98403 and analytical batch 880-98427 could not be evaluated for accuracy. The associated matrix spike duplicate (MSD) met acceptance criteria.

Method 8015MOD_NM: Surrogate recovery for the following samples were outside control limits: SS 477 (890-7492-20), (LCS 880-98403/2-A) and (LCSD 880-98403/3-A). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The method blank for preparation batch 880-98404 and analytical batch 880-98430 contained Diesel Range Organics (Over C10-C28) above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 8015MOD_NM: An incorrect volume of surrogate spiking solution was inadvertently added the following samples: (LCS 880-98404/2-A) and (LCSD 880-98404/3-A). Percent recoveries are based on the amount spiked.

Method 8015MOD_NM: The laboratory control sample (LCS) associated with preparation batch 880-98404 and analytical batch 880-98430 was outside acceptance criteria. Re-extraction and/or re-analysis could not be performed; therefore, the data have been reported. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits and may be used to evaluate matrix performance.

Method 8015MOD_NM: The laboratory control sample (LCS) for preparation batch 880-98403 and analytical batch 880-98427 recovered outside control limits for the following analytes: Gasoline Range Organics (GRO)-C6-C10. Since only an acceptable LCSD is required per the method, the LCSD shows recovery for the batch and the data has been qualified and reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

Method 300_ORGFM_28D - Soluble: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-98374 and analytical batch 880-98376 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.
