Background:

The site is located in Unit Letter I (SE4SE4), Section 1, Township 22 South, Range 32 East, approximately twenty-seven miles west of Eunice, in Lea County, New Mexico. The site is located on public land managed by the Bureau of Land Management. Topographic Map and OSE POD Locations Map, are included as Figure 1 and Figure 2, respectively.

The release occurred on an active layflat water line; Latitude 32.41769 North, Longitude - 103.62007 West. The Initial NMOCD Form C-141 indicated that on January 19, 2024, approximately 438 BBL of produced water were released due to a blow out on the water line. A crew was dispatched to the release site and the line was repaired. Previously submitted pages of the NMOCD Form C-141 are available on the NMOCD Imaging System.

NMOCD Site Classification:

A search of the New Mexico Office of the State Engineer (NMOSE) and United States Geological Survey (USGS) groundwater databases was completed in effort to determine the horizontal distance to known water sources within a half mile radius of the Release Site. Depth to groundwater was determined to be greater than 105 ft using a direct measurement in a temporary borehole installed by Select Water Solutions, LLC (POD C-04907) within ½ mile of the site.

The site was delineated and further remediated to the NMOCD Closure Criteria shown below. Utilizing this information, the NMOCD Closure Criteria for the Site were determined as follows:

Table 1 NMOCD Closure Criteria

>100 feet	Chloride***	EPA 300.0 or SM4500 C1 B	20,000 mg/kg
	TPH (GRO+DRO+MRO)	EPA SW-846 Method 8015M	2,500 mg/kg
	GRO+DRO	EPA SW-846 Method 8015M	1,000 mg/kg
	BTEX	EPA SW-846 Method 8021B or 8260B	50 mg/kg
	Benzene	EPA SW-846 Method 8021B or 8260B	10 mg/kg

**Delineation:**

On February 16, 2024, Hungry Horse Services LLC conducted an initial site assessment consisting of photographing and mapping the release area, as well as taking delineation samples from surface to 6 ft bgs. Horizontal samples were also taken at this time. Laboratory analysis for all constituents indicated that the areas of SP1-SP6 were below NMOCD closure criteria for chlorides, BTEX, and TPH at 6 ft bgs. Laboratory results indicated all horizontal locations were below NMOCD closure criteria.

During delineation activities, sample test trenches were advanced in the release area in effort to determine the vertical extent of contamination. These sample locations are identified by SP designation. In addition, sample test trenches were advanced along the outside edges of the release area in effort to determine the horizontal extent of contamination. These sample locations are identified by HZ designation. During the advancement of the test trenches, soil samples were collected and field screened for the presence of chloride concentrations utilizing a Hach Quantab® chloride test kit.

Remediation Activities:

Between March 25, 2024 and June 3, 2024, approximately 3000 cubic yards of impacted soil were excavated from the release area by Elite Environmental Services, Inc. The impacted soils were then treated using Elite's Advanced Remediation Technology by applying the bio-regent SA1000 through the soil shredder. The impacted soils were then replaced after laboratory analysis of the treated soil, sidewalls, and floor of the excavation indicated that area had been remediated to NMOCD closure criteria.

Closure of the incident was requested from OCD and rejected due to multiple factors. The closure samples were not taken every 200 square feet, and the process of remediation was not granted pre-approval before it was completed. Upon receiving rejection, Select employed Elite to excavate the entire area and complete dig/haul remediation, based on prior agreement with Elite that they would do so if closure was not approved. Elite then removed approximately 1800 cubic yards of the planned excavation to a depth of 6 ft and stockpiled the soil, and did not return. The bottoms and sidewalls of the excavation that Elite completed were sampled on May 15, 2025. Those samples are SP1-SP81 and SW1-SW15. All areas, with the exception of SW7-SW10, and SW12, were above NMOCD closure criteria at the time.

Hungry Horse LLC was then employed by Select to complete the remediation. On July 17, 2025, a temporary exploratory groundwater bore was advanced to 101 ft bgs. After leaving the bore for 72 hours, it was gauged, and water was not encountered. Thus, the NMOCD closure criteria changed from the strictest standard to the levels required of the >100 ft.

From July 11, 2025 to August 8, 2025, Hungry Horse LLC completed excavation and hauling of the remaining impacted soils to a depth of 4.1 ft bgs., including the stockpile that Elite had left. Approximately 2700 cubic yards were disposed at Lea Land Landfill, from an area of

approximately 12,900 square feet. Locally sourced like material was used to backfill the excavation and a sample was taken of the backfill on July 23, 2025 and laboratory analysis showed that it was clean.

Restoration, Reclamation, and Re-Vegetation:

Once analytical results confirmed that contaminated soils had been successfully remediated, the excavated area was backfilled and contoured to achieve erosion control and preserve surface water flow. The affected area was reseeded with an approved seed mixture and monitored for restoration of 75% of initial ground coverage according to NMOCD standards. All areas not reasonably needed for production were restored to pre-existing conditions.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Lea County, New Mexico

Survey Area Data: Version 21, Sep 3, 2024

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Feb 7, 2020—May 12, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Hi there again,

It's me, requesting another extension...

Our original plan when I emailed last was to go with a different contractor to proceed with the remediation, which I was going to do, and then our legal team advised us to attempt to let the original contractor finish up the job. Needless to say, they did not, which delayed us yet again. I have awarded the bid to another contractor to finish the job, and we just now finished pumping about 1500 barrels of rainwater out of the hole that the previous contractor left. We are anticipating having it wrapped up by the end of the month, as about half of it is done already.

Please let me know if you have any questions.

Thank you!

Good afternoon,

I wanted to provide an update on this. The samples were taken on 5/15, and I received all of them back by 5/27, and everything except one corner is still contaminated. We are once again having trouble with the contractor, and I have sent the remainder of the work to a different contractor to finish the job up for us. We will get started next week. I don't anticipate needing any more than thirty days to finish up, though at this point, who knows. I am yet again requesting a 30-day extension, and also pulling my hair out.

Thank you!

Good afternoon!

Select is requesting a 15-day extension of this closure report due to inclement weather delaying excavation. The area has received several inches of rainfall over the past couple of weeks and we are having trouble getting it dried enough to finish up excavation and for reliable closure sampling. I am planning to have it sampled by May 15, but I wasn't sure if that counted as meeting the remediation due date.

Thank you!

Hi Nelson!

I am reaching out to see if we could possibly get a 30-day extension on this closure. We are having trouble with the contractor that is responsible for dig/haul on this remediation. We don't expect to be any later than the deadline but I wanted to request an extension just in case. The contractor is not wanting to meet our terms that were agreed upon originally but I think we should have it worked out this week. I do have a different contractor on standby if needed, of course, but I don't expect it to go that far. We understand if the extension is not granted, but I did want to request it just in case we do end up running a little late. Thank you for your consideration. Thanks!

To whom it may concern (c/o Timsan Bricker for SELECT WATER SOLUTIONS, LLC), The OCD has approved the submitted *Application for administrative approval of a release notification and corrective action* (C-141), for incident ID (n#) nAPP2402032332, with the following conditions:

- Remediation plan is approved with the following condition; 1. Chemically treated soils will not be acceptable for backfill due to the remediation process not being pre-approved by OCD. 2. Chemically treated soils must have its disposition at an OCD approved facility and manifest included within the final remediation closure report. 3. Prior to backfilling the open excavation per 19.15.29.12D (2) NMAC, Select Water must collect a minimum of one five-point composite from the media being used as

backfill to verify that it meets non-waste containing, uncontaminated, earthen material with chloride concentrations less than 600 mg/kg as analyzed by EPA Method 300.0, or other test methods approved by the division. This is especially important for the material being used within the top 4 feet from the ground surface. 4. Select Water has 90-days (April 15, 2025) to submit to OCD its appropriate or final remediation closure report.

The signed C-141 can be found in the OCD Online: Imaging under the incident ID (n#).

Seed Mixture 2, for Sandy Sites

The holder shall seed all disturbed areas with the seed mixture listed below. The seed mixture shall be planted in the amounts specified in pounds of pure live seed (PLS)* per acre. There shall be no primary or secondary noxious weeds in the seed mixture. Seed will be tested and the viability testing of seed will be done in accordance with State law (s) and within nine (9) months prior to purchase. Commercial seed will be either certified or registered seed. The seed container will be tagged in accordance with State law(s) and available for inspection by the authorized officer.

Seed will be planted using a drill equipped with a depth regulator to ensure proper depth of planting where drilling is possible. The seed mixture will be evenly and uniformly planted over the disturbed area (smaller/heavier seeds have a tendency to drop the bottom of the drill and are planted first). The holder shall take appropriate measures to ensure this does not occur. Where drilling is not possible, seed will be broadcast and the area shall be raked or chained to cover the seed. When broadcasting the seed, the pounds per acre are to be doubled. The seeding will be repeated until a satisfactory stand is established as determined by the authorized officer. Evaluation of growth will not be made before completion of at least one full growing season after seeding.

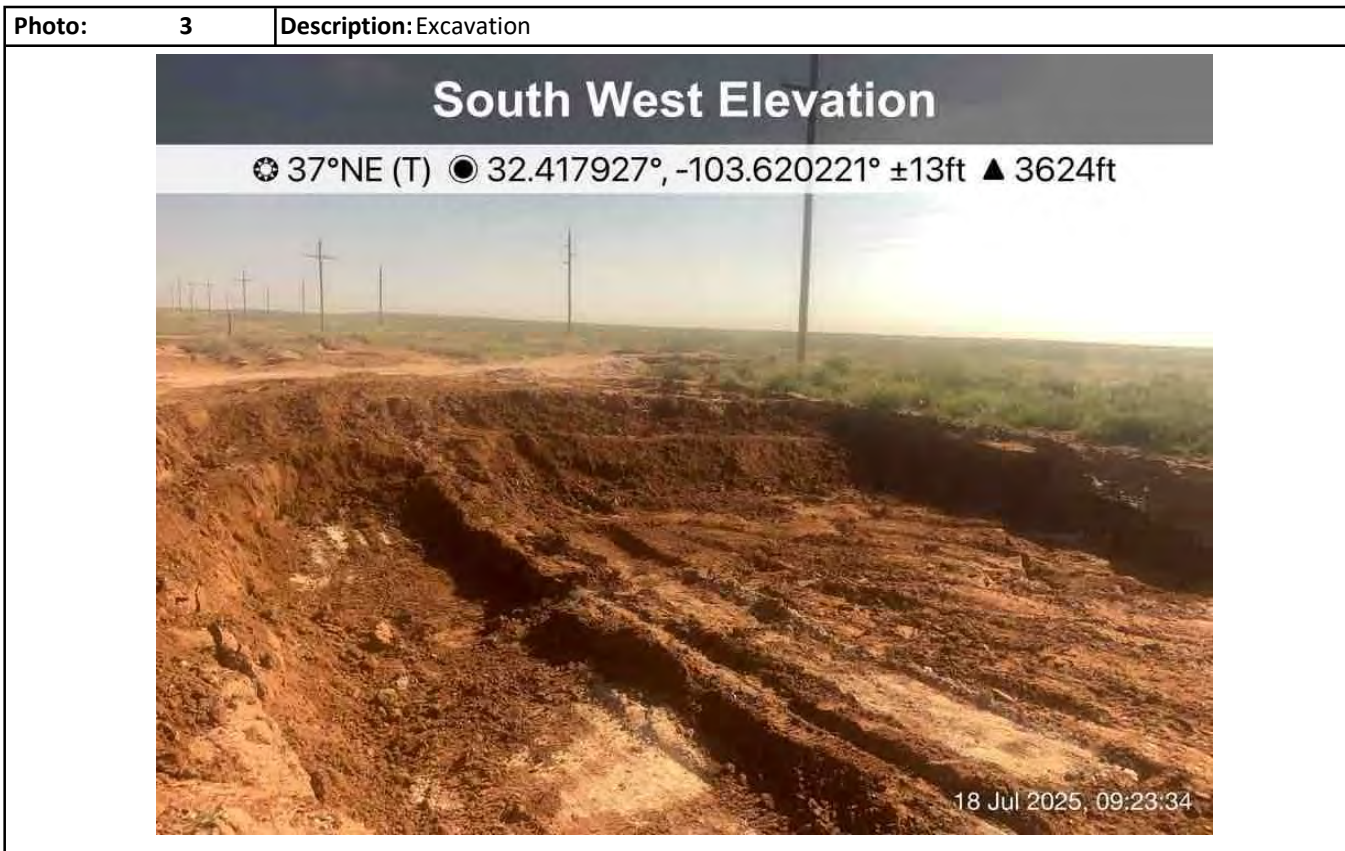

Species to be planted in pounds of pure live seed* per acre:

<u>Species</u>	<u>lb/acre</u>
Sand dropseed (<i>Sporobolus cryptandrus</i>)	1.0
Sand love grass (<i>Eragrostis trichodes</i>)	1.0
Plains bristlegrass (<i>Setaria macrostachya</i>)	2.0

*Pounds of pure live seed:

Pounds of seed x percent purity x percent germination = pounds pure live seed

To Whom It May Concern:

The above well location and the immediate area mentioned above requires advanced soil boring to take place at approximately 101 feet below ground surface. The boring will be secured and left open for 72 hours at which time SELECT WATER SOLUTIONS LLC will assess for the presence or absence of groundwater. Temporary PVC well material will be placed to total depth of the boring and secured at the surface. If water is encountered at any point during the boring, installation of the soil boring will be plugged using Portland Type 1/11 neat cement less than 6.0 gallons of water per 94lb sack. If no water is encountered, then the soil boring will be plugged. The Bureau of Land Management (landowner) authorizes the access of the area to accomplish depth to groundwater determination of this site.

QUESTIONS (continued)

Operator: SELECT WATER SOLUTIONS, LLC 1820 N I-35 Gainesville, TX 76240	OGRID: 289068
	Action Number: 502571
	Action Type: [C-141] Reclamation Report C-141 (C-141-v-Reclamation)

QUESTIONS

Nature and Volume of Release (continued)	
Is this a gas only submission (i.e. only significant Mcf values reported)	No, according to supplied volumes this does not appear to be a "gas only" report.
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	Yes
Reasons why this would be considered a submission for a notification of a major release	From paragraph A. "Major release" determine using: (1) an unauthorized release of a volume, excluding gases, of 25 barrels or more.
With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.	

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.

The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	Not answered.

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. The responsible party acknowledges they must substantially restore, reclaim, and re-vegetate the impacted surface area to the conditions that existed prior to the release or their final land use in accordance with 19.15.29.13 NMAC including notification to the OCD when reclamation and re-vegetation are complete.
