Eddy County, New Mexico**

To Whom it May Concern:

Ensolum, LLC (Ensolum), on behalf of WPX Energy Permian, LLC (WPX), has prepared this *Reclamation Work Plan (RWP)* to document soil sampling activities completed and propose excavation activities to address waste-containing related to three fluid releases at the Ross Draw Unit #012 (Site). WPX is submitting this *RWP*, describing analytical results from soil sampling activities associated with remediation activities connected to Incident Numbers nHMP1407325518, nab1702749185, and nAPP2315142829 and proposing excavation of the impacted soil prior to submitting a *Reclamation Closure Request*.

SITE DESCRIPTION AND RELEASE SUMMARY

The Site is located in Unit A, Section 33, Township 26 South, Range 30 East, in Eddy County, New Mexico (32.0047607°, -103.8798141°) and is associated with oil and gas exploration and production operations on Federal Land managed by the Bureau of Land Management (BLM).

On March 05, 2014, a transfer pump overloaded causing a water tank to overflow. This failure resulted in the release of approximately 10 barrels (bbls) of produced water and 5 bbls of crude oil into the earthen containment; no fluid was recovered. WPX reported the release to the New Mexico Oil Conservation Division (NMOCD) and filed a Corrective Action Form C-141 (Form C-141) on March 06, 2014. Subsequently, NMOCD assigned Incident Number nHMP1407325518 to the release.

On January 11, 2017, a stuffing box failed due to human error. This failure resulted in the release of approximately 10 bbls of produced water and 2 bbls of crude oil onto the caliche pad; 6 bbls of produced water and 1 bbl of crude oil were recovered with a vacuum truck. Some of the spilled fluids migrated to an area off-pad that is located on the west side of the caliche pad. WPX reported the release to the NMOCD and filed a Corrective Action Form C-141 (Form C-141) on January 26, 2014. NMOCD assigned Incident Number nab1702749185 to the release.

On May 19, 2023, human error resulted in a tank overflow. This error resulted in the release of approximately 30 bbls of produced water into the earthen containment; 20 bbls was recovered with a vacuum truck. WPX reported the release to the NMOCD and filed a Corrective Action Form C-141 (Form C-141) on May 31, 2014. NMOCD later assigned Incident Number nAPP2315142829 to the release.

The *Remediation Closure Report* for Incident Number nab1702749185 was approved on August 01, 2023, and the *Remediation Closure Report* for Incident Numbers nHMP1407325518 and nAPP2315142829 was approved on August 06, 2023.

SITE CHARACTERIZATION AND CLOSURE CRITERIA

The Site was characterized to assess the applicability of Table I, Closure Criteria for Soils Impacted by a Release, of Title 19, Chapter 15, Part 29, Section 12 (19.15.29.12) of the New Mexico Administrative Code (NMAC) Site Assessment/Characterization. Potential Site receptors are identified on Figure 1.

The closest permitted groundwater well with depth to groundwater data is a monitoring well (Ross Draw Unit #57) located 2,639 feet northeast of the Site. The most recent documented water level measurement was collected on December 16, 2020, and reported groundwater was not present in the boring completed to a depth of 110 feet below ground surface (bgs); therefore, groundwater is present at depths greater than 110 feet bgs. All wells used for depth to groundwater determination are depicted on Figure 1, and the referenced well records are included in Appendix A.

The closest continuously flowing or significant watercourse to the Site is an intermittent dry wash, located approximately 2,290 feet north of the Site. The Site is greater than 200 feet from a lakebed, sinkhole, or playa lake and greater than 300 feet from an occupied residence, school, hospital, institution, church, or wetland. The Site is greater than 1,000 feet to a freshwater well or spring and is not within a 100-year floodplain or overlying a subsurface mine. The Site is potentially underlain by unstable geology (medium potential karst designation area). Site receptors are identified on Figure 1. These incidents took place prior to the release of NMOCD's updated guidance on karst potential occurrence zones effective December 01, 2024, and as such the following NMOCD Table I Closure Criteria (Closure Criteria) apply:

- Benzene: 10 milligrams per kilogram (mg/kg)
- Benzene, toluene, ethylbenzene, and total xylenes (BTEX): 50 mg/kg
- Total petroleum hydrocarbons (TPH)-gasoline range organics (GRO) and TPH-diesel range organics (DRO): 1,000 mg/kg
- TPH: 2,500 mg/kg
- Chloride: 20,000 mg/kg

A reclamation requirement of 600 mg/kg chloride and 100 mg/kg TPH will be applied to the top 4 feet of all areas, per 19.15.29.13.D (1) NMAC for the top 4 feet of areas that will be reclaimed following remediation.

SITE ASSESSMENT AND DELINEATION SOIL SAMPLING ACTIVITIES

Beginning on September 03, 2025, Ensolum personnel were onsite to delineate the extent of the releases as indicated by field screening and laboratory analytical results. The off-pad portion of Incident Number nab1702749185 was reclaimed during previous excavation activities summarized in the *Remediation Closure Report* for this incident. Sixteen lateral delineation soil samples (SS01 through SS16) were collected from the areas surrounding the release extents to verify the lateral extent of impacted soils at ground surface and 1-foot bgs. Sixteen boreholes (BH01 through BH16) were advanced via hand auger within the release extents to assess the presence of waste-containing soil in the top 4 feet. Sampling locations BH01, BH03, BH08, BH09, BH11, and BH14 were advanced to terminal depths ranging from 6 feet to 17 feet bgs, and samples were collected every 2 feet to determine the vertical extent of impacts. Soil sample locations are depicted on Figure 2.

Ross Draw Unit #012

All delineation soil samples were field screened for chloride using Hach® chloride QuanTab® test strips and for TPH using a PetroFLAG® Soil Analyzer. Field screening results and observations for the boreholes were logged on lithologic soil sampling logs, which are included in Appendix B. Photographic documentation of delineation are included in Appendix C.

All soil samples were placed directly into pre-cleaned glass jars, labeled with the location, date, time, sampler name, method of analysis, and immediately placed on ice. The soil samples were transported under strict chain-of-custody procedures to Envirotech Analytical Laboratory (Envirotech) in Farmington, New Mexico, for analysis of the following chemicals of concern (COCs): BTEX following United States Environmental Protection Agency (EPA) Method 8021B; TPH-GRO, TPH-DRO, and TPH-oil range organics (ORO) following EPA Method 8015M/D; and chloride following EPA Method 300.0.

LABORATORY ANALYTICAL RESULTS

All delineation soil samples collected at sampling locations SS01 through SS16, BH06, BH10, and BH12 reported COC concentrations compliant with Closure Criteria and the reclamation requirement. Laboratory analytical results for delineation soil samples collected from boreholes BH01 through BH05, BH07 through BH09, BH11, and BH13 through BH16 reported TPH and/or chloride concentrations exceeding the reclamation requirement in the release areas; all soil samples were compliant with the Site Closure Criteria.

As a result of delineation activities, waste-containing soil was identified in the top 4 feet of the historical release extents and excavation appears necessary to support reclamation requirements. Laboratory results for the delineation soil samples are summarized in Table 1, and laboratory analytical reports are included in Appendix D.

PROPOSED RECLAMATION WORK PLAN

Reclamation of the pad will be conducted based on the delineation results, and as such, a reclamation requirement of 600 mg/kg chloride and 100 mg/kg TPH will be applied to the top 4 feet of the subsurface that was impacted by the releases per 19.15.29.13.D (1) NMAC for the top 4 feet of areas that will be reclaimed following remediation.

- Excavation of areas reporting waste-containing soil as noted in Figure 3 (Areas 1, 2 & 3) will be completed to depths ranging from 2 feet to 4 feet bgs. Excavation will proceed laterally until sidewall samples confirm COC concentrations are compliant with the reclamation requirement set forth in 19.15.29.13 NMAC. Up to 4,571 cubic yards will require excavation and will be transported to an approved disposal facility. The estimated excavation extent is shown on Figure 3.
- The potential historical drilling pit area, shown on Figure 3 as Area 4, will be excavated to a depth of 2 feet bgs. Roughly 1,952 cubic yards of soil will be excavated from the historical drilling pit and properly disposed of offsite at an approved disposal facility.
- An estimated total of 8,806 cubic yards (expansion factor included) will require excavation and will be transported to an approved disposal facility.
- WPX requests an alternative sampling plan to the confirmation sampling frequency for the floors of the excavation. Following excavation of waste-containing soil at the Site, 5-point composite confirmation samples will be collected at a frequency of every 400 square feet from the floor of the excavation and at a frequency of every 200 square feet from the sidewalls of the excavation. The 5-point composite samples will be collected by placing five equivalent aliquots of soil into a

resealable plastic bag and homogenizing the sample by thoroughly mixing. Based on the areal extent of the excavation area, the variance request will be equally protective of human health, the environment, and groundwater since the depth to groundwater is reasonably estimated to be greater than 100 feet bgs, there are no other sensitive receptors in the vicinity of the Site, and soil within the reclaimed pad has been adequately delineated. Confirmation soil samples will be handled and analyzed for TPH and chloride using the methods described above.

- All equipment and pipelines will be removed from the Site.
- The excavation areas will be backfilled with caliche below 2 feet bgs and locally sourced topsoil in the top 2 feet and recontoured to match pre-existing conditions.
- One representative soil sample will be collected from the imported topsoil and analyzed for BTEX, TPH, and chloride using the same methods discussed above.
- Additional vertical delineation samples will be collected within the suspected historical pit area (Area 4) and analyzed for BTEX following EPA Method 8021B, and TPH and chloride using the same methods discussed above.
- Soil in the vicinity of the release is classified as Gypsum land-Reeves complex with Sandy loam, 0 to 8 inches bgs; Clay loam, 8 to 32 inches bgs; and gypsiferous material, 32 to 60 inches bgs according to the United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) Web Soil Survey completed on December 09, 2025;
- The backfilled areas will be seeded utilizing a weed-free seed mix designed by the BLM to meet reclamation standards for this region, which will be: BLM Seed Mixture #1, for Loamy Sites;
- The seed mixture will be distributed with either a push broadcaster seed spreader, tractor operated broadcast seed spreader, drill seeding, or other means;
- Application of the seed mixture will be at a coverage of 10 pounds of seeds per acre of reclaimed pasture with distribution by a drilling method or 20 pounds of seeds per acre of reclaimed pasture with distribution by a broadcast method;
- Erosion control management is not anticipated, but if needed, will potentially include:
 - The placement of waddles in areas with a propensity for high run off rates;
 - Straw cover if high winds are anticipated to support moisture retention and limit wind from blowing seeds away before they have had time to germinate; and/or
 - Other erosional control best management practices (BMP) as necessary to support timely and healthy regrowth of vegetation in disturbed areas;
- Seeding is anticipated to be completed in the Spring or Fall when temperatures and precipitation are most conducive for vegetation growth. In general, seeding should occur approximately one month after the last frost in the Spring up until approximately one month prior to the first fall frost. Ensolum understands the optimal time to seed is between July and early September, which will be adhered to at this Site;
- Bi-annual inspections (at a minimum) will take place at the Site until vegetation has been established that reflects pre-disturbance vegetation cover with a total percent plant cover of greater than 70 percent of pre-disturbance levels, excluding invasive or noxious weeds.. The Site will be inspected the following Fall to assess the success of regrowth. If necessary, an additional application of the BLM-approved pure live seed mixture will be applied as well as any needed BMPs installed to support growth and limit erosion;

- Upon completion of revegetation, a copy of the C-103 submitted to NMOCD will also be submitted to BLM for final inspection and release.

Devon will complete the proposed excavation and soil sampling activities within 90 days of the date of approval of this RWP by the NMOCD.

- M2 Matrix spike recovery was outside quality control limits. The associated LCS spike recovery was acceptable.
- M4 Matrix spike recovery value is suspect since the analyte concentration in the sample is disproportionate to the spike level. The associated LCS spike recovery was acceptable.
- S5 Surrogate spike recovery exceeded acceptance limits due to interfering target and/or non-target analytes.
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- RPD Relative Percent Difference
- DNI Did Not Ignite
- DNR Did not react with the addition of acid or base.

Note (1): Methods marked with ** are non-accredited methods.

Note (2): Soil data is reported on an "as received" weight basis, unless reported otherwise.

QUESTIONS

Nature and Volume of Release (continued)	
Is this a gas only submission (i.e. only significant Mcf values reported)	No, according to supplied volumes this does not appear to be a "gas only" report.
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	Yes
Reasons why this would be considered a submission for a notification of a major release	From paragraph A. "Major release" determine using: (1) an unauthorized release of a volume, excluding gases, of 25 barrels or more.
<i>With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.</i>	

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.

The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	Not answered.

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

A 100-year floodplain	Between 1 and 5 (mi.)
Did the release impact areas not on an exploration, development, production, or storage site	No

Remediation Plan
Please answer all the questions that apply or are indicated. This information must be provided to the appropriate district office no later than 90 days after the release discovery date.

Requesting a remediation plan approval with this submission	Yes

Have the lateral and vertical extents of contamination been fully delineated	Yes
Was this release entirely contained within a lined containment area	No

Soil Contamination Sampling: (Provide the highest observable value for each, in milligrams per kilograms.)

Chloride (EPA 300.0 or SM4500 Cl B)	12100
TPH (GRO+DRO+MRO) (EPA SW-846 Method 8015M)	411

These estimated dates and measurements are recognized to be the best guess or calculation at the time of submission and may (be) change(d) over time as more remediation efforts are completed. The OCD recognizes that proposed remediation measures may have to be minimally adjusted in accordance with the physical realities encountered during remediation. If the responsible party has any need to significantly deviate from the remediation plan proposed, then it should consult with the division to determine if another remediation plan submission is required.
