LEASE: V092100000  
Incident Number nAPP2519949953  
Sandoval County, New Mexico

To Whom It May Concern:

Ensolum, LLC (Ensolum), on behalf of Enduring Resources, LLC (Enduring), has prepared the following *Remediation Report and Closure Request* summarizing remediation and sampling activities to address impacts to soil identified north of the Lybrook 2206 16A #221H production well pad (Site). The purpose of the remediation activities was to remediate impacts to soil related to the release of crude oil originating from a subsurface pipeline at the Site.

**SITE DESCRIPTION AND RELEASE SUMMARY**

The Site is located in Unit I, Section 16, Township 22N, Range 6W, in Sandoval County, New Mexico (36.136800,-107.466947) and is associated with oil and gas exploration and production operations on State Trust Land (STL) managed by the New Mexico State Land Office (NMSLO). On July 8, 2025, corrosion of a pipeline resulted in the release of 50 barrels (bbls) of crude oil into undeveloped rangeland north of the facility pad. Emergency response activities were initiated, including stopping the flow of any liquids, isolating the leaking line, constructing a berm around the release source with a hand shovel, Site mapping, and regulatory reporting activities. Enduring reported the release to the New Mexico Oil Conservation Division (NMOCD) and NMSLO and the release was assigned NMOCD Incident Number nAPP2519949953.

**SITE CHARACTERIZATION AND CLOSURE CRITERIA**

As presented in the February 5, 2026 *Remediation Work Plan* (approved by the NMSLO on February 9, 2026 and the NMOCD on February 12, 2026), the following Closure Criteria for constituents of concern (COCs) have been applied to the Site:

- Benzene: 10 milligrams per kilogram (mg/kg)
- Benzene, toluene, ethylbenzene, and xylenes (BTEX): 50 mg/kg
- Total petroleum hydrocarbons (TPH) as a combination of gasoline range organics (GRO), diesel range organics (DRO), and motor oil range organics (MRO): 100 mg/kg
- Chloride: 600 mg/kg

## REMEDIATION AND SOIL SAMPLING ACTIVITIES

Following emergency response activities and receipt of NMSLO authorization to implement remediation activities in compliance with the NMSLO Cultural Properties Protection Rule (19.2.24 NMAC), remediation activities were initiated. Excavation and source removal activities were first conducted at the Site in October 2025. At that time, the excavation was advanced to depths between 2 feet and 9 feet below surface grade (bgs). On October 9, 2025, the excavation was sampled in an attempt to achieve Site closure and compliance with NMOCD and NMSLO requirements. However, TPH concentrations exceeded the Closure Criteria in several sidewall and all floor sampling areas. Based on these results, additional excavation was recommended to further remove impacted soil.

Enduring and Ensolum continued excavation activities in February 2026 to continue removing impacted soil. Soil from the excavation was field screened for volatile organic compounds (VOCs) utilizing a calibrated photoionization detector (PID) to guide impacted soil removal. Once field screening indicated that soil was compliant with applicable Closure Criteria, the NMOCD was notified at least 2-business days prior to conducting the sampling activities, with correspondence included in Attachment 1.

Confirmation composite samples were collected on February 12 and February 20, 2026 from the sidewalls and floor of the excavation extent. The confirmation soil samples were placed directly into pre-cleaned glass jars, labeled with the location, date, time, sampler name, method of analysis, and immediately placed on ice. The soil samples were transported under strict chain-of-custody procedures to Envirotech analytical laboratory in Farmington, New Mexico for analysis of the following contaminants of concern (COCs): BTEX following United States Environmental Protection Agency (EPA) Method 8021B; TPH following EPA Method 8015M/D; and chloride following EPA Method 300.0.

Analytical results from the excavation indicated all COCs were compliant with NMOCD Table I Closure Criteria in all final confirmation soil samples collected at the Site with the exception of sidewall sampling areas SW07, SW14, and SW30. Because of these exceedances, additional soil was removed on March 13, 2026. Soil was removed from these sidewalls and resampled as sampling areas SW40 to SW45. Three additional floor samples (FS51 through FS53) were also collected due to the square footage of floor area exposed during sidewall removal. All samples were collected and submitted for analysis in the same manner as described above. Based on the analytical results, all samples collected from the final excavation extent are compliant with the applicable NMOCD Table I Closure Criteria.

The final excavation extent measured approximately 6,000 square feet and was advanced to depths ranging from 4 feet to 11 feet bgs. In total, approximately 1,000 cubic yards of impacted soil was removed from the excavation and disposed at the Envirotech commercial landfarm located in San Juan County, New Mexico. Confirmation sample locations and results are summarized in Table 1 and on Figure 2, with complete laboratory analytical reports attached as Attachment 2. Photographs taken by Ensolum during the excavation work are included in Attachment 3.

## CONCLUSIONS AND CLOSURE REQUEST

Corrective actions and soil sampling activities were conducted at the Site to address the release discovered on July 8, 2025. Laboratory analytical results from confirmation soil samples, collected from the final extents of the excavation, indicated all COC concentrations were compliant with the Site Closure Criteria, and no further remediation is required. The corrective action initiated by Enduring has mitigated impacts at this Site and these remedial actions have been protective of human health, the environment, and groundwater. With the analytical results and variance described above, Enduring respectfully requests closure for Incident Number nAPP2519949953.

## PROPOSED RECLAMATION ACTIONS

Following NMOCD and NMSLO approval of this report, the excavation area will be backfilled and contoured to the previously undisturbed topography. The backfill source material was sampled on February 12, 2026 and results confirm that it is free of waste-containing material. Results are included in Table 1, with the complete laboratory analytical report attached in Attachment 2. Topsoil will be placed at the Site to achieve a topsoil depth comparable to off-Site conditions. After the excavation has been backfilled and recontoured, the surface area will be reclaimed and reseeded as described below:

- A certified weed-free seed mix will be used. Based on the soil type and location of the Site, the below BLM recommended seed mix will be used to seed the Site at the rate specified in pounds of pure live seed (PLS) per acre. Seed species will include:

Common Name	Scientific Name	Published Root Zone Depths (ft)	PLS/Acre
Fourwing saltbush	<i>Atriplex canescens</i>	4-10'	4.0
Shadscale	<i>Atriplex confertifolia</i>	3-6'	2.0
Indian ricegrass	<i>Achnatherum hymenoides</i>	3-6'	5.0
Sand dropseed	<i>Sporobolus cryptandrus</i>	2-4'	0.5
Blue grama	<i>Bouteloua gracilis</i>	1-3'	2.0
Alkali sacaton	<i>Sporobolus airoides</i>	0-1.5'	0.25
Small flower globemallow	<i>Sphaeralcea parvifolia</i>	2-4'	0.25

- Seed species may be substituted for other Badland seed mix species based on availability from the seed supplier.
- Seeding will be completed within two weeks following completion of final seedbed preparation, if conditions are favorable. Alternatively, seeding will be completed the spring 2026 when temperatures and precipitation are the most conducive to vegetation growth.
- The seed mix will be applied via drill seeding or broadcast seeding. If broadcast seeding is selected, the PLS/acre will be doubled, and seeding will be followed by light chaining or harrowing.
- The seeded areas may be fenced, if warranted, to prevent livestock and wildlife from impacting vegetation establishment.
- Erosion control of the newly reclaimed areas will include prompt revegetation and contouring of the surface to prevent concentrated surface water flow.
- Reclamation activities will be documented with photographs and will be timestamped with GPS data in decimal degrees.

## RECLAMATION MONITORING

Following reseeded, a narrative of reclamation activities summarizing site work including photographs and erosion control measures will be submitted in a *Reclamation Activities Report*. The Site will then be monitored for vegetation grown to ensure that reclamation activities were successful. Focus for this phase will be to prevent erosion and Site degradation, and to monitor for and treat invasive and noxious

weed species. Semi-annual inspections (at a minimum) will take place at the location until revegetation is consistent with local natural vegetation density. Once reclamation is completed, Enduring will submit a follow-up Reclamation Closure Report documenting remediation activities, soil sampling, restoration, reclamation, and revegetation of the affected area.

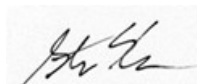

- In the event erosion control management is necessary to support vegetation growth and minimize erosion until the root structures take hold, the following best management practices (BMPs) may be applied:
  - Placement of swales, water bars, or straw wattles in areas with a propensity for high run off rates;
  - Straw cover, if high winds are anticipated, to support moisture retention and limit wind from blowing away seeds before they have had time to germinate; and/or
  - Other erosional control BMPs as necessary to support timely and healthy regrowth of vegetation in disturbed areas.
  - Noxious and invasive weeds will be identified and treated by a licensed contracted herbicide applicator or mechanically removed.
- Semi-annual inspections (at a minimum) will take place at the location until vegetation has been established which reflects pre-disturbance vegetation cover with a total percent plant cover of greater than 70 percent (%) pre-disturbance levels, excluding invasive or noxious weeds.
- Upon completion of successful revegetation, a Reclamation Closure Report documenting the vegetation assessment results will be submitted to the NMSLO and NMOCD for final inspection and release.

**QUESTIONS**

<b>Nature and Volume of Release (continued)</b>	
Is this a gas only submission (i.e. only significant Mcf values reported)	<b>No, according to supplied volumes this does not appear to be a "gas only" report.</b>
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	<b>Yes</b>

<i>With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.</i>	

**Initial Response**

*The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.*

The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	Not answered.

*Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.*

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. The responsible party acknowledges they must substantially restore, reclaim, and re-vegetate the impacted surface area to the conditions that existed prior to the release or their final land use in accordance with 19.15.29.13 NMAC including notification to the OCD when reclamation and re-vegetation are complete.

I hereby agree and sign off to the above statement	Name: Heather Huntington Title: Permitting Tech Email: hhuntington@enduringresources.com Date: 04/09/2026
