**Subsequent Report**

**Type of Submission:** Subsequent Report

**Type of Action:** Drilling Operations

**Date Sundry Submitted:** 07/29/2021

**Time Sundry Submitted:** 10:04

**Date Operation Actually Began:** 07/12/2021

**Actual Procedure:** 7/12/2021: Drill 9.875 inch intermediate hole to 8696 ft. Switch to 8.75 bit and drill intermediate hole to 10682 ft. 7/18/2021: While pulling out of hole became stuck at 5100 ft. We backed out the tool joint above and TOH. We rigged up fishing tools and got stuck running in with an overshot and jars. On the overshot there was a skirt to help guide in the overshot to the DP. In the process of TIH and working the fishing BHA we twisted off the skirt at about 1600 ft. We ran in with a spear and grapple to retrieve that fish and we were unsuccessful and left part of the grapple downhole. Ran in with a composite cement retainer, 5000 psi rated, and set at about 900 ft. We established an injection and then pumped Neat C cement through the retainer, 1351 sks. We finished the job with 760 psi at 1 bpm leading us to believe that the cement was squeezing successfully. We strung back in and tested the squeeze job with a successful test. We currently have 3 barriers as well as the TA cap over the well; cement, cement retainer, and mud column. The retainer was left in hole to be drilled out at a later date.
