CLOSED-LOOP SYSTEM <input type="checkbox"/>			
OTHER: <input type="checkbox"/>		OTHER: <input type="checkbox"/>	

13. Describe proposed or completed operations. (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work). SEE RULE 19.15.7.14 NMAC. For Multiple Completions: Attach wellbore diagram of proposed completion or recompletion.

Well has been down due to pump or hole in tubing. Unable to locate a pulling unit until Mesa committed for the week of August 1st to possibly August 13th. Therefore will not know exact start date until well service alerts operator.

Prognosis: Spot and rig up pulling unit. Pull and inspect rods laying down pitted or worn rods. Check pump action upon landing. Drop standing valve to seating nipple pressure test tubing to determine HIT or not.

After determining condition of rods, pump & tubing go back in hole with production tubing and junk basket running to bottom to catch and cleanup loose material and to loosen material. Well has 187 feet of open hole. May make more than one junk basket run and may include a 5-1/2" casing scraper in addition to junk basket. Once a TD close to the original 2197' is determined. Run back in hole with nproduction tubing adjusting length by adding joints from inventory until 20 foot above bottom with seating nipple, run a new 1-1/4" rod pump on 3/4" KD rod string. Load tubing with ranch water, test pump. Rig up surface production piping and pumping unit, release pulling unit and place well in production.

Spud Date:

October 13, 1976

Rig Release Date:

January 27, 1977
