Sundry Print Report

U.S. Department of the Interior BUREAU OF LAND MANAGEMENT

Well Name: RDX FEDERAL 10 Well Location: T26S / R30E / SEC 10 / County or Parish/State: EDDY /

NESW / 32.055598 / -103.871233

Well Number: 4 Type of Well: OIL WELL Allottee or Tribe Name:

Lease Number: NMNM100558 Unit or CA Name: Unit or CA Number:

US Well Number: 3001540878 Well Status: Producing Oil Well Operator: WPX ENERGY

PERMIAN LLC

Accepted for record – NMOCD gc 10/20/2021

Notice of Intent

Sundry ID: 2636409

Type of Submission: Notice of Intent

Type of Action: Plug and Abandonment

Date Sundry Submitted: 09/28/2021 Time Sundry Submitted: 03:55

Date proposed operation will begin: 10/11/2021

Procedure Description: Please see the attached information.

Surface Disturbance

Is any additional surface disturbance proposed?: No

BUREAU OF LAND MANAGEMENT Carlsbad Field Office 620 East Greene Street Carlsbad, New Mexico 88220 575-234-5972

Permanent Abandonment of Federal Wells Conditions of Approval

Failure to comply with the following Conditions of Approval may result in a Notice of Incidents of Noncompliance (INC) in accordance with 43 CFR 3163.1.

1. Plugging operations shall commence within <u>ninety (90)</u> days from the approval date of this Notice of Intent to Abandon.

If you are unable to plug the well by the 90th day provide this office, prior to the 90th day, with the reason for not meeting the deadline and a date when we can expect the well to be plugged. Failure to do so will result in enforcement action.

The rig used for the plugging procedure cannot be released and moved off without the prior approval of the authorized officer. Failure to do so may result in enforcement action.

- 2. <u>Notification:</u> Contact the appropriate BLM office at least 24 hours prior to the commencing of any plugging operations. For wells in Chaves and Roosevelt County, call 575-627-0272; Eddy County, call 575-361-2822; Lea County, call 575-393-3612.
- 3. <u>Blowout Preventers</u>: A blowout preventer (BOP), as appropriate, shall be installed before commencing any plugging operation. The BOP must be installed and maintained as per API and manufacturer recommendations. The minimum BOP requirement is a 2M system for a well not deeper than 9,090 feet; a 3M system for a well not deeper than 13,636 feet; and a 5M system for a well not deeper than 22,727 feet.
- 4. <u>Mud Requirement:</u> Mud shall be placed between all plugs. Minimum consistency of plugging mud shall be obtained by mixing at the rate of 25 sacks (50 pounds each) of gel per 100 barrels of **brine** water. Minimum nine (9) pounds per gallon.
- 5. <u>Cement Requirement</u>: Sufficient cement shall be used to bring any required plug to the specified depth and length. Any given cement volumes on the proposed plugging procedure are merely estimates and are not final. Unless specific approval is received, no plug except the surface plug shall be less than 25 sacks of cement. Any plug that requires a tag will have a minimum WOC time of 4 hours.

In lieu of a cement plug across perforations in a cased hole (not for any other plugs), a bridge plug set within 50 feet to 100 feet above the perforations shall be capped with 25 sacks of cement. If a bailer is used to cap this plug, 35 feet of cement shall be sufficient. Before pumping or bailing cement on top of CIBP, tag will be required to verify depth. Based on depth, a tag of the cement may be deemed necessary.

Unless otherwise specified in the approved procedure, the cement plug shall consist of either Neat Class "C", for up to 7,500 feet of depth or Neat Class "H", for deeper than 7,500 feet plugs.

6. <u>Dry Hole Marker</u>: All casing shall be cut-off at the base of the cellar or 3 feet below final restored ground level (whichever is deeper). The BLM is to be notified a minimum of 4 hours prior to the wellhead being cut off to verify that cement is to surface in the casing and all annuluses. Wellhead cut off shall commence within ten (10) calendar days of the well being plugged. If the cut off cannot be done by the 10th day, the BLM is to be contacted with justification to receive an extension for completing the cut off.

The well bore shall then be capped with a 4-inch pipe, 10-feet in length, 4 feet above ground and

The well bore shall then be capped with a 4-inch pipe, 10-feet in length, 4 feet above ground and embedded in cement, unless otherwise noted in COA (requirements will be attached). The following information shall be permanently inscribed on the dry hole marker: well name and number, name of the operator, lease serial number, surveyed location (quarter-quarter section, section, township and range or other authorized survey designation acceptable to the authorized officer such as metes and bounds).

- 7. <u>Subsequent Plugging Reporting:</u> Within 30 days after plugging work is completed, file one original and three copies of the Subsequent Report of Abandonment, Form 3160-5 to BLM. The report should give in detail the manner in which the plugging work was carried out, the extent (by depths) of cement plugs placed, and the size and location (by depths) of casing left in the well. <u>Show date well was plugged.</u>
- 8. <u>Trash:</u> All trash, junk and other waste material shall be contained in trash cages or bins to prevent scattering and will be removed and deposited in an approved sanitary landfill. Burial on site is not permitted.

Following the submission and approval of the Subsequent Report of Abandonment, surface restoration will be required. See attached reclamation objectives.

Reclamation Objective: Oil and gas development is one of many uses of the public lands and resources. Reclamation Objectives and Procedures While development may have a short- or long-term sffect on the land, successful reclamation can ensure the effect of the development and present the entermonent of the effect of the development and present the entermonent of the entermonent the effect is not permanent. During the life of the development, all disturbed areas not needed for active writte development in order to minimize the subjournmental imposts of range of the of the description in order to minimize the street to that her manners from the extension of the contract of the contra support of production operations should undergo. Inform. rectangation in order to minimize the support of facilities and account on other resources and uses. At final abandonment, well locations, and the character and broduction tachers of nearetherm on once resources and necessary that the character and productivity of the land and water are restored.

The long-term objective of final reclamation is to set the course for eventual ecosystem restoration. including the restoration of the natural vegetation community, hydrology, and wildlife habitats. In most cases this means returning the land to a condition approximating or equal to that which existed prior to the distribunce. The final goal of reclamation is to restore the character of the land and water to its predisturbance condition. The operator is generally not responsible for achieving full ecological restoration of the operator continuation and productivity. the site. Instead, the operator is generally not responsible for achieving null ecological restoration of the crafting of the objectives of the surface management agency and take steps necessary to ensure that long-term objectives

To achieve these objectives, remove any and all comminants, scrap/wash, equipment, pipelines and powerlines (Confact service companies, allowing plenty of time to have the risers and power lines and powertimes (Contract set vice companies) emoving prints of time to make the set them for remove independent of the last day and try to set them to remove poses removed prior to regarding, don't wait the tast day and try to set diem to remove infrastructure). Strip and remove caliche, contour the location to blend with the surrounding landscape, and analysis are considered in the original re-distribute the native soils, provide erosion control as needed, rip and seed as specified in the original ApD COA. This will apply to well pads, facilities, and access roads. Barricade access road at the starting point, If reserve pits have not reclaimed due to salts or other contaminants, submit a plan for approval, as to poly Non blobose to bloride adednate testolation of the bit area.

- 1. The Application for Permit to Drill or Reenter (APD, Form 3160-3). Surface Use Plan or Operations must include adequate measures for stabilization and reclamation of dishubed lands.

 Oil and Gas operators must plan for reclamation both interior and final up from in the APD. Off and Gas operators must plat for reclamation, both interim and final, up from in the APD
- 2. For wells and/or access roads not having an approved plan, or an inadequate plan for surface reclaination (either interim or final reclaination), the operator must submit a proposal describing the procedures for reclamation. For interim reclamation, the appropriate time for submittal would be when stime the West Companies of the State of t be when filing the Well Completion or Recompletion Report and Log (Form 3160-4). For final reclamation, the appropriate time for submittal would be when filing the Notice of Intent, or the Subsequent Report of Abandounent, Sundry Notices and Reports on Wells (Form 3160-5). Interim reclamation is to be completed within 6 months of well completion, and final reclamation is to be completed within 6 months of well completion, and final reclamation is to be completed within 6 months of well abandonnent
- 3. The operator must file a Subsequent Report Plug and Abandonment (Form 3160-5) following the
