13. Describe proposed or completed operations. (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work). SEE RULE 19.15.7.14 NMAC. For Multiple Completions: Attach wellbore diagram of proposed completion or recompletion.

Solaris Water Midstream, LLC has performed the repair of the above captioned well. A pulling unit with hydraulic BOPs was rigged up on the hole. A blanking plug was set in the tail pipe of the packer to isolate formation. We got a good positive pressure test on the casing, packer, and blanking plug to 1,500 psi for 30 min after pulling the tubing string out of the hole. When arriving on location the next day, 200 psi of pressure was on the wellbore indicating the blanking plug may not be holding. Due to a number of issues with the blanking plug, the existing permanent packer was milled out. A new retrievable packer (as shown on the WBD) was ran, along with the repaired tubing string. The new packer was set 5' above the old packer at 13,185', still within the 100' window between open hole and the packer. A successful MIT was performed the morning of 08/09/2022 and witnessed by the NMOCD.
