Yes, agreed. We propose to execute a top job using poly pipe on the IC and SC annulus after cutting off the wellhead.

Rustin

**CAUTION:** This email originated outside of our organization. Exercise caution prior to clicking on links or opening attachments.

Good morning Monica – Please review the updated pressure data for the intermediate casing and review our proposal.

#### January 2024:

- 1/9/2024: Returned ~9 months after April P&A Ops and found SIBHP Opsi, SIICP 67psi, SICP Opsi – no buildup since rig left location 4/2023. Bled off pressure.
- 1/10/2024: SIICP built up 6psi in 24hr – this is significantly lower than prior buildups (review charts and pressure trend data)
- 1/15/2024: SIICP 15psi, SIBHP Opsi, SICP Opsi – Buildup rate is minimal compared to April 2023 buildup rates (review charts and pressure trend data).
- 1/19/2024: Bled off pressure on IC.
- 1/22/2024 7AM: SI intermediate csg valve beginning with Opsi.
- 1/23/2024 7AM: Take pressure readings, SIBHP Opsi, SIICP 1psi, SICP Opsi. We are confident that we have shut off the source of the IC pressure.

**Proposal:** Based on the data above, we propose to finalize the P&A by setting (2) inside plugs for the OJO/KRD & Surface. We will perform a top job on any annulus as needed after wellhead is cut off.

Thanks,

#### Rustin Mikeska

**Subject:** RE: Hilcorp P&A Pre-Job Revision: Randleman 1B

Good morning Monica – Please review the following summary of work performed in April 2023. Hilcorp is proposing to finalize the P&A after successful cement squeeze attempts into the intermediate casing annulus. I have provided IC pressure trends for your review.

## Randleman 1B

3004531932

Completed **April 2023** Ops:

1. AOL 4/18/2023: SIICP 550psi, BDW 2min.
2. **Pump Plug #1** as proposed (PC Plug).
  - a. Perf'd @ 2,528' to incorporate a **sqz attempt** with Plug #1.
  - b. Pressured up to 550psi – held. Tag 2,414' suggests no cmt was sqz'd away.
3. **Sqz Attempt #2:** RIH w/ jet cutter, made cut @ 2,345'
  - a. Spot 13sx Finecem (0.8 yield) cement in 4-1/2" csg
  - b. Pressured up to 750psi & bumped to hold pressure. Tag suggest 66' cmt sqz'd away (0.9bbl).
4. **Pump Plug #2** as proposed (FRD Plug).
5. **Sqz Attempt #3:** RIH w/ jet cutter, made cut @ 1,756'
  - a. Spot 13sx Finecem (0.8 yield) cement in 4-1/2" csg
  - b. Pressured up to 750psi & bumped to hold pressure. Tag suggest 55' cmt sqz'd away (0.8bbl).
6. Left all csg strings SI over the weekend.
7. AOL 4/24/2023 to check SIPs – SIBHP Opsi, SIICP 135psi, SICP Opsi. Bled off pressure.
8. Decision to move rig to Larcher 2 until we determine results and a path forward.
9. AOL 4/26/2023 to check SIPs – SIICP built up to 70psi in 48hrs, SIBHP Opsi, SICP, Opsi.

Completed **January 2024:**

- 1/9/2024: Returned ~9 months later and found SIBHP Opsi, SIICP 67psi, SICP Opsi – no continued buildup since rig left location 4/2023. Bled off pressure.
- 1/10/2024: SIICP built up 6psi in 24hr – this is significantly lower than prior buildups (review charts and pressure trend data)
- 1/15/2024: SIICP 15psi, SIBHP Opsi, SICP Opsi – Buildup rate is minimal compared to April 2023 buildup rates (review charts and pressure trend data).

The rig is currently remediating the plug design issue on the Larcher 2 and will finish up within the next 2 days. Please advise on path forward for Randleman 1B.

Thanks again,

**Rustin Mikeska**

Good afternoon Monica – Please see today’s planned activity and path forward.

**Randleman 1B**

3004531932

Today, we have completed the jet cut, attempted injection and spotted cement for squeeze.

1. AOL 4/21/2023. SIICP 40psi – we will leave SI.
2. RIH w/ jet cutter, made cut @ 1,756’
  - a. Pressured up to 600psi – no injection.
3. Spotted 100’ Halliburton Finecem from 1,660’ – 1,760’ in the 4-1/2’ csg.
4. Pressured up to 750psi and begin WOC for 4hr. We will squeeze away no more than 0.75bbl cmt (50’).
  - a. During WOC time (4hr), we will bump the pressure back up to 750psi as needed.
5. Will perform a hard SI on the production csg & plug with 750psi. We will leave both PC & IC valves SI until Monday, 4/24/2023.
6. Will bleed off pressure Monday to determine results of Jet Cut/Squeeze #2, then contact NMOCD to discuss.

In the meantime, we will rig down and move to the nearby Larcher 2 until we determine results and discuss a path forward for the Ojo/KRD plug & beyond.

Call with any questions/concerns.

Thanks,

**Rustin Mikeska**

Good morning Monica – Please see today’s planned activity and approve our path forward.

**Randleman 1B**

3004531932

We completed the jet cut and are preparing to spot & squeeze away cement.

1. AOL 4/20/2023. SIICP 75psi – we left SI & will bleed off after squeeze attempt.

2. RIH w/ jet cutter, make cut @ 2,345'
  - a. Pressure up to 520psi – no injection.
3. Will spot 100' Halliburton Finecem from 2,265' – 2,365' in the 4-1/2' csg.
4. Will pressure up to 700psi & squeeze away no more than 0.75bbl cmt (50').
  - a. WOC for this cement type is 4hr.
5. Will Pump Regulatory Plug #2 across Fruitland from 2,084' – 2,234' using II/V cement.
6. Will then bleed off ICsg pressure to determine if our jet cut/sqz worked.

Call with any questions/concerns.

Thanks,

**Rustin Mikeska**

Good afternoon Monica,

As discussed, please see the revision to cement type used & the addition of squeeze perforations to the PC plug. Attached is the original approved NOI & updated Proposed WBD w/ annotations.

**Randleman 1B**

3004531932

Cement Type & Specs for Regulatory Plugs: Type II/V, 1.29yld, 15ppg, 6.041gpsx mix wtr, neat.

Cement Type & Spec for other squeeze work: Halliburton Finecem, 0.8yld, 13ppg, 4.05gpsx mix wtr, neat.

We added perforations to the PC Plug in an attempt to shut off our intermediate casing communication. This attempt was unsuccessful, see summary below:

1. AOL 4/18/2023. Bleed off 550psi on ICsg in 2min. Monitor pressure BU.
  - a. 25psi in 1hr. Bleed off pressure, monitor pressure BU.
  - b. 10psi in 1hr. Leave SI, monitor overnight.
2. AOL 4/19/2023. Bleed off 95psi on ICsg. Monitor pressure BU
  - a. 5psi in 1hr. Due to “sluggish” pressure BU, will limit number of bleedoffs.
  - b. Perforate 2,528' – 2,536'. No pressure change seen on ICsg.
  - c. Spot 150' cement across PC from 2,464' – 2,614'. PU, reverse out tbq. Apply 550psi to plug in an attempt to sqz – holding, no bleedoff. WOC.
  - d. Will tag TOC 4/20/2023

Tomorrow we plan to tag TOC in place on PC plug, then attempt our first jet cut & squeeze ops in a continued attempt to shut off our intermediate communication.

Thanks,

**Rustin Mikeska**
