13. Describe proposed or completed operations. (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work). SEE RULE 19.15.7.14 NMAC. For Multiple Completions: Attach wellbore diagram of proposed completion or recompletion.

Avant Operating, LLC requests to run a DV tool & packer on intermediate casing if full returns are lost drilling through the Capitan Reef. The DV tool will be set a minimum of 50' below the previous shoe and 200' above the current shoe. Verbal approval for this work was given by Long Vo on 12/18/2024, see attached BLM COAs.

Subject: RE: [EXTERNAL] Avant - Grayling Pad 1, 2, & 3 - Alternate Procedure Request

Ryan,

You have verbal approval. Please have a copy of this email on the rig site. Please follow up with a formal sundry within 5 business days.

Operator has proposed a DV tool(s), the depth may be adjusted as long as the cement is changed proportionally. The DV tool(s) may be cancelled if cement circulates to surface on the first stage.

DV tool(s) shall be set a minimum of 50' below previous shoe and a minimum of 200' above current shoe. Operator shall contact the BLM if DV tool(s) depth cannot be set in this range. If an ECP is used, it is to be set a minimum of 50' below the shoe to provide cement across the shoe. If it cannot be set below the shoe, a CBL shall be run to verify cement coverage.

- a. First stage to DV tool(s): Cement to circulate. If cement does not circulate off the DV tool(s), contact the appropriate BLM office before proceeding with second stage cement job.
- b. Second stage above DV tool(s):
 - Cement to surface. If cement does not circulate, contact the appropriate BLM office.

Subject: [EXTERNAL] Avant - Grayling Pad 1, 2, & 3 - Alternate Procedure Request

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Good morning Long,

As discussed on the call, we are getting ready to move the rig to Grayling 14 Fed Com 601H, 602H, 603H, 604H, 605H, and 606H (3 pad locations in Sec14-T19S-R32E) located within the Capitan Reef contour. If we lose full

returns while drilling through the reef, we will run a DV tool and packer with a 2-stage cement job. The DV tool will be set a minimum of 50' below the previous shoe and 200' above the current shoe. Please reply to this email if we are approved to proceed with this plan for all approved wells in this unit.

Thank you,
Ryan Harris
