Procedure Description: Devon Energy Production Company, LP respectfully request an upgrade to the subject SWD. The Rio Blanco 33 Federal #002 SWD, which is one of three Devon-owned SWD wells that supports produced water disposal in the Thistle Gaucho area, has been identified as a candidate for a well construction upgrade. Devon has been strategically replacing injection strings with an upgraded fiberglass-lined tubing design with premium gas-tight connections and Inconel corrosion resistant alloy permanent packer and anchor latch seal assembly to provide improved corrosion and erosion resistance. Devon plans to mobilize a workover rig to the Rio Blanco 33 Federal #002 SWD on or about 12/16/2024 to pull the fiberglass-lined API connection injection tubing and AS1-X retrievable packer, replace the tubing head, run a casing inspection log, pressure test the casing, wireline set a new Inconel corrosion resistant alloy permanent packer, and install new fiberglass-lined tubing with premium gas-tight connections and Inconel anchor latch seal assembly. Post-workover MIT is forecasted for 1/13/2025. Please see the attached supporting documentation.

Title 18 U.S.C Section 1001 and Title 43 U.S.C Section 1212, make it a crime for any person knowingly and willfully to make to any department or agency of the United States any false, fictitious or fraudulent statements or representations as to any matter within its jurisdiction.

(Instructions on page 2)

GENERAL INSTRUCTIONS

This form is designed for submitting proposals to perform certain well operations and reports of such operations when completed as indicated on Federal and Indian lands pursuant to applicable Federal law and regulations. Any necessary special instructions concerning the use of this form and the number of copies to be submitted, particularly with regard to local area or regional procedures and practices, are either shown below, will be issued by or may be obtained from the local Federal office.

SPECIFIC INSTRUCTIONS

Item 4 - Locations on Federal or Indian land should be described in accordance with Federal requirements. Consult the local Federal office for specific instructions.

Item 13: Proposals to abandon a well and subsequent reports of abandonment should include such special information as is required by the local Federal office. In addition, such proposals and reports should include reasons for the abandonment; data on any former or present productive zones or other zones with present significant fluid contents not sealed off by cement or otherwise; depths (top and bottom) and method of placement of cement plugs; mud or other material placed below, between and above plugs; amount, size, method of parting of any casing, liner or tubing pulled and the depth to the top of any tubing left in the hole; method of closing top of well and date well site conditioned for final inspection looking for approval of the abandonment. If the proposal will involve **hydraulic fracturing operations**, you must comply with 43 CFR 3162.3-3, including providing information about the protection of usable water. Operators should provide the best available information about all formations containing water and their depths. This information could include data and interpretation of resistivity logs run on nearby wells. Information may also be obtained from state or tribal regulatory agencies and from local BLM offices.

NOTICES

The Privacy Act of 1974 and the regulation in 43 CFR 2.48(d) provide that you be furnished the following information in connection with information required by this application.

AUTHORITY: 30 U.S.C. 181 et seq., 351 et seq., 25 U.S.C. 396; 43 CFR 3160.

PRINCIPAL PURPOSE: The information is used to: (1) Evaluate, when appropriate, approve applications, and report completion of subsequent well operations, on a Federal or Indian lease; and (2) document for administrative use, information for the management, disposal and use of National Resource lands and resources, such as: (a) evaluating the equipment and procedures to be used during a proposed subsequent well operation and reviewing the completed well operations for compliance with the approved plan; (b) requesting and granting approval to perform those actions covered by 43 CFR 3162.3-2, 3162.3-3, and 3162.3-4; (c) reporting the beginning or resumption of production, as required by 43 CFR 3162.4-1(c); and (d) analyzing future applications to drill or modify operations in light of data obtained and methods used.

ROUTINE USES: Information from the record and/or the record will be transferred to appropriate Federal, State, local or foreign agencies, when relevant to civil, criminal or regulatory investigations or prosecutions in connection with congressional inquiries or to consumer reporting agencies to facilitate collection of debts owed the Government.

EFFECT OF NOT PROVIDING THE INFORMATION: Filing of this notice and report and disclosure of the information is mandatory for those subsequent well operations specified in 43 CFR 3162.3-2, 3162.3-3, 3162.3-4.

The Paperwork Reduction Act of 1995 requires us to inform you that:

The BLM collects this information to evaluate proposed and/or completed subsequent well operations on Federal or Indian oil and gas leases.

Response to this request is mandatory.

The BLM would like you to know that you do not have to respond to this or any other Federal agency-sponsored information collection unless it displays a currently valid OMB control number.

BURDEN HOURS STATEMENT: Public reporting burden for this form is estimated to average 8 hours per response, including the time for reviewing instructions, gathering and maintaining data, and completing and reviewing the form. Direct comments regarding the burden estimate or any other aspect of this form to U.S. Department of the Interior, Bureau of Land Management (1004-0137), Bureau Information Collection Clearance Officer (WO-630), 1849 C St., N.W., Mail Stop 401 LS, Washington, D.C. 20240

Rio Blanco 33-2 SWD - General Upgrade Procedure

10/22/2024

Well Name: Rio Blanco 33-2 SWD
Location: 1,980' FNL / 1,980' FWL of SEC 33-T22S-R34E

API: 30-025-36360
County: Lea, NM

Current Well Status: Plan to mobilize a workover rig after approval is granted to proceed.

Objective: Pull existing fiberglass lined API connection tubing and AS1-X retrievable packer, replace the tubing head, run a casing inspection log, pressure test the casing, wireline set a new Inconel corrosion resistant alloy permanent packer, and install new fiberglass-lined tubing with premium gas-tight connections and Inconel anchor latch seal assembly. Schedule and perform official MIT with NMOCD.

1. MIRU workover rig and all related equipment.
2. Record SITP and SICP. Bleed down any pressure that may be present on tubing or casing to tank, recording whether gas or fluid and volume recovered, if any. Monitor for H2S when blowing down.
3. Install BPV in tubing hanger.
4. ND injection tree.
5. Install lift sub with TIW valve.
6. NU 7-1/16" 5K BOPE.
7. Retrieve BPV and install 2-way check.
8. Test BOPE to 5,000 psi.
9. Retrieve 2-way check.
10. Release packer per tool supervisor's recommendation. Fluid may U-tube up casing.
11. Lay down and inspect all the following injection tubing assembly currently in the hole:
 - Tubing hanger (**scrap**)
 - 353 joints of 3-1/2" fiberglass lined API connection tubing
 - 3-1/2" EUE 8rd box x 2-7/8" EUE 8rd pin XO
 - 90 joints of 2-7/8" fiberglass lined API connection tubing
 - 2-7/8" EUE 8rd x 2-3/8" EUE 8rd XO
 - On/Off Tool and 5" X 2-3/8" Nickel-coated AS1-X packer/tail pipe assembly (**scrap**)
12. Drift and tally 2-7/8" 7.90# P110 PH6 work string.
13. TIH with 7" RBP on 2-7/8" PH6 tubing and set @ ~1,500'.
14. Dump sand on top of RBP.
15. TOH SB 2-7/8" PH6 tubing in derrick.
16. ND 7-1/16" 5K BOPE.
17. Remove existing 11" 5K x 7-1/16" 5K tubing head (**scrap**).
18. Clean and prep top of 11" 5K casing head.
19. Install new 11" 5K x 7-1/16" 5K tubing head and test void to 5,000 psi.
20. NU 7-1/16" 5K BOPE.
21. Function test 5K BOPE.
22. TIH with 2-7/8" PH6 tubing, wash sand, and retrieve RBP.
23. TOH SB 2-7/8" PH6 tubing in derrick and LD RBP.
24. TIH with 3-7/8" tricone bit and 5" casing scraper on 2-7/8" PH6 tubing to 14,560' (10' above top of open hole interval at 14,570').
25. TOH SB 2-7/8" PH6 tubing in derrick and LD bit and scraper.
26. Flush casing with 150 bbl 10 ppg brine.
27. MIRU Baker WL and related PCE to run Vertilog on 5" production liner casing.
28. TIH with Baker-recommended GR/JB/CCL to planned log depth.
29. POH with GR/JB/CCL.

Rio Blanco 33-2 SWD - General Upgrade Procedure

10/22/2024

30. TIH with Vertilog tools to 14,560' (10' above top of OH interval at 14,570') and log to TOL at 11,646'.
31. RDMO Baker WL and related PCE.
32. TIH with tandem 5" RBP/packer on 2-7/8" PH6 tubing to 14,518' (planned packer depth).
 - NOTE: setting depths may adjust depending upon casing inspection log results.
33. Set RBP.
34. PUH 5'-10' and set packer.
35. Pressure test down tubing against RBP to 1,000 psi for 10 min to ensure set and holding pressure with no leak off. Bleed down to zero.
36. Pressure test down backside against packer to 1,000 psi for 30 min to test casing integrity. Record results in WellView. Bleed down to zero.
 - If casing fails to test (loses more than 10% test pressure in 30 min), move up hole testing but no higher than 14,470'. Per NMOCD, packer must be set within 100' of top of OH (14,470' – 14,570')
37. Unseat packer, latch onto RBP, unseat RBP, and TOH LD 2-7/8" PH6 tubing and tandem RBP/packer.
38. MIRU API WL and prep to install new 5" Halliburton UNS Inconel 925 permanent packer system.
39. Ensure Halliburton service tech is present and oversees proper running protocol is followed for making up, running, and setting the new permanent packer on WL.
40. TIH with Halliburton-recommended GR/JB/CCL to setting depth.
41. TIH with new permanent packer on WL per Halliburton recommendation and set at planned packer depth.
42. TOH and RDMO API WL.
43. Load 2-7/8" 6.50# L80 BTS-8-FO-FGL CLS Glassbore fiberglass lined tubing onto racks and clean/tally.
44. Load 4-1/2" 11.60# P110HC TCPC CLS Glassbore fiberglass lined tubing onto racks and clean/tally.
 - Set of 4-1/2" 11.60# P110HC TCPC CLS Glassbore fiberglass lined pups ready to go (2', 4', 6', 8', 10', 12') for spacing out
45. Ensure CLS service tech and Patriot thread rep are present to clean/inspect threads, apply proper thread compound, and oversee proper running protocol is followed for making up and running all 4-1/2" TCPC and 2-7/8" BTS-8-FO-FGL fiberglass lined tubing.
 - Ensure lift nubbins for 2-7/8" BTS-8-FO-FGL tubing and XO's for TIW valves on both 4-1/2" TCPC and 2-7/8" BTS-8-FO-FGL are on location. Will also require slip-type elevators and drill collar clamp for running 2-7/8" BTS-8-FO-FGL integral joint connections.
 - Put thread protectors on pin ends when pulling up ramp to rig floor. CLS/Patriot will provide stabbing guide for stabbing joints for make-up.
46. Ensure Halliburton service tech is present and oversees proper protocol is followed for picking up seal assembly and stinging into packer.
47. RU Frank's International casing crew and torque turn tools.
48. MU and TIH all the following injection tubing assembly:
 - Sealing Assembly: 2-1/4" VTP Seal Assembly, 2-7/8" x 2-1/4" No-go Locator, 2-7/8" Profile Nipple with 1.875" X Profile, 2-7/8" BTS-8 Accessory Box x 2-7/8" CS Hydril Pin XO, and 2-7/8" 6.50# L80 BTS-8-FO-FGL CLS Glassbore Fiberglass Lined Joint
 - ~94 Joints of 2-7/8" 6.50# L80 BTS-8-FO-FGL CLS Glassbore Fiberglass Lined Tubing
 - 4-1/2" TCPC Accessory Box x 2-7/8" BTS-8 Pin XO
 - ~274 Joints of 4-1/2" 11.60# P110HC TCPC CLS Glassbore Fiberglass Lined Tubing
 - Hanger Assembly: 4-1/2" 11.60# P110HC TCPC CLS Glassbore Fiberglass Lined Joint, 4-1/2" BTC Pin x 4-1/2" TCPC Accessory Box XO, and 4-1/2" Tubing Hanger
49. Sting into packer per Halliburton recommendation with seal assembly and perform preliminary MIT on annulus to 1,000 psi for 30 min and record in WellView.
50. Sting out of packer per Halliburton recommendation.
51. Space out in order to sting back into packer.

Rio Blanco 33-2 SWD - General Upgrade Procedure

10/22/2024

52. Circulate inhibited 10 ppg brine packer fluid with biocide down annulus.
53. Sting back into packer and land tubing hanger per Halliburton recommendation. Engineer to communicate TubeMove calculations with recommended compression.
 - Will need 4-1/2" 11.60# P110 BTC landing sub for tubing hanger
54. Install BPV in tubing hanger.
55. ND 7-1/16" 5K BOPE.
56. RD Frank's International casing crew.
57. NU new injection tree and test void to 5,000 psi.
58. Retrieve BPV.
59. Perform preliminary MIT on annulus to 500 psi for 30 min and record.
60. RDMO workover rig and all related equipment.
61. Secure well.
62. Notify and set up NMOCD for official MIT with chart recorder.

Carlsbad, New Mexico 88220
575-234-5972

Conditions of Approval for Workover/Deepening of a Well

1. Notification: Contact the appropriate BLM office at least 24 hours prior to the commencing of any operations. For wells in Eddy County, call 575-361-2822. For wells in Lea County, call 575-689-5981
2. Blowout Preventers: A blowout preventer (BOP), as appropriate, shall be installed before commencing any operation. The BOP must be installed and maintained as per API and manufacturer recommendations. The minimum BOP requirement is a 2M system for a well not deeper than 9,100 feet, a 3M system for a well not deeper than 13,600 feet, or a 5M system for a well not deeper than 22,700 feet (all depths are for measured well depth).
3. Cement: Notify BLM if cement fails to circulate.
4. Subsequent Reporting: Within 30 days after work is completed, file a Subsequent Report (Form 3160-5) to BLM. The report should give in detail the manner in which the work was carried out. Show date work was completed. If producing a new zone, submit a Completion Report (Form 3160-4) with the Subsequent Report.
5. Trash: All trash, junk and other waste material shall be contained in trash cages or bins to prevent scattering and will be removed and deposited in an approved sanitary landfill. Burial on site is not permitted.
6. If well location is within the Timing Limitation Stipulation Area for Lesser Prairie-Chicken: From March 1st through June 15th annually, activities will be allowed except between the hours from 3:00 am and 9:00 am. Normal vehicle use on existing roads will not be restricted.

anthony.harris	Sundry is approved subject to the following conditions: 1. Injection survey is required across the injection interval as per requirements outline in SWD-2171 permit. Results of the injection survey to be summarized in a report and attached to a C-103 z Subsequent report general sundry 2. Top of cement to be confirmed. Cement Bond log is required across the 7-inch casing from the top of the 5-inch liner hanger to a minimum depth of 100 feet inside the 9-5/8-inch casing shoe. 3. Construct a Hall plot using the injection data from the last five years. Hall's plot will assist OCD in determining the confinement of the injected fluid within the approved injection interval.	2/7/2025
