---

Good afternoon,

It appears that the Conditions of Approval (COAs) for the Safari State Com #124H did not publish correctly. Therefore, this email is to serve as notice of all COAs applied to the permit.

The Safari State Com #124H 30-015-56285 is subject to the following COAs:

- A [C-103] Sub. Drilling (C-103N) is required within (10) days of spud.
- Notify the OCD 24 hours prior to casing & cement.
- Once the well is spud, to prevent ground water contamination through whole or partial conduits from the surface, the operator shall drill without interruption through the freshwater zone or zones and shall immediately set in cement the water protection string.
- Oil base muds are not to be used until freshwater zones are cased and cemented providing isolation from the oil or diesel. This includes synthetic oils. Oil based mud, drilling fluids and solids must be contained in a steel closed loop system.
- Cement is required to circulate on both surface and intermediate1 strings of casing.
- If cement does not circulate on any string, a Cement Bond Log (CBL) is required for that string of casing.
- File As Drilled C-102 and a directional Survey with C-104 completion packet.
- This well is within the Capitan Reef. Due to the anticipated shallow depth of the Capitan reef the surface casing string shall be sat and cemented back to surface immediately above the Capitan Reef. The first intermediate string shall be set and cemented back to surface immediately below the base of the Capitan Reef.
- Brine water shall not be used in the Capitan Reef. Only fresh water shall be utilized until the Capitan Reef is cased and cemented.

Thank you.

Respectfully,

*Matthew Gomez*
