Pit, Closed-Loop System, Below-Grade Tank, or			
Proposed Alternative Method Permit or Closure Plan Application			
Type of action: Permit of a pit, closed-loop system, below-grade tank, or proposed alternative method Closure of a pit, closed-loop system, below-grade tank, or proposed alternative method Modification to an existing permit Closure plan only submitted for an existing permitted or non-permitted pit, closed-loop system, below-grade tank, or proposed alternative method			
Instructions: Please submit one application (Form C-144) per individual pit, closed-loop system, below-grade tank or alternative request			
Please be advised that approval of this request does not relieve the operator of liability should operations result in pollution of surface water, ground water or the environment. Nor does approval relieve the operator of its responsibility to comply with any other applicable governmental authority's rules, regulations or ordinances.

CLOSURE PLAN TEMPORARY PITS

In accordance with 19.15.17.13 NMAC, the following information describes the closure plans for temporary pits on Hess Corporation locations.

- Hess will remove free standing liquids as soon as practical for recycle use in the
 drilling of other wells. All free standing liquids that are not recycled will be
 removed prior to pit closure and disposed of in a division-approved facility or
 recycled, reused or reclaimed in a manner approved by the District IV office.
 Solids in the pit will be allowed to air dry as completely as possible prior to
 starting the pit closure.
- 2. The preferred method of closure for temporary pits is on-site burial in a separate, lined deep trench assuming that all closure requirements and standards of Subsection C of 19.15.17.10 NMAC and Subparagraph (c) of Paragraph (3) of Subsection F of 19.15.17.13 NMAC are met.
- 3. Hess shall notify the surface owner of the proposed closure plan and provide the District IV office with proof of notice.
- 4. Hess shall close temporary pits within 6 months of rig off status.
- 5. Notice of closure will be given to the District IV office within 72 hours and one week of closure.
- 6. Hess shall collect a five point, composite sample of the contents of the temporary pit and test the sample per Subsection B of 19.15.17.13(B)(1)(b) to demonstrate that the contents do not exceed the following limits:

Composites	Test Methods	Limit (mg/Kg)
Benzene	EPA SW-846 Methods 8021B or 8260B	0.2
BTEX	EPA SW-846 Methods 8021B or 8260B	50
TPH	EPA SW-846 Method 418.1	2500
GRO/DRO	EPA SW-846 Method 8015M	500
Chlorides	EPA method 300.1	3000

- 7. In the event that the test results exceed the above criteria, Hess will handle all pit contents per Subparagraph (a) of Paragraph (1) of Subsection B of 19.15.17.13 NMAC (ie. dig and haul).
- 8. Upon completion of testing and District Office approval for onsite burial, Hess shall dig a deep trench within 100 feet of the temporary pit in accordance with the

CLOSURE PLAN TEMPORARY PITS

design and construction requirements specified in Paragraphs (1) through (8) of Subsection J of 19.15.17.11 NMAC. This trench will be of sufficient depth to insure that a minimum of four feet of clean soil will cover the lined waste. This trench will be lined with a geomembrane liner (20-mil string reinforced LLDPE or equivalent).

- 9. The temporary pit contents will be stabilized and solidified to a bearing capacity sufficient to support the final cover of the trench burial. The temporary pit contents and original liner will then be transferred to the separately lined deep trench and completely encased in the trench liner. The trench liner will cover all six sides of the temporary pit contents in such a manner that prevents the collection of infiltration water in the lined trench and prevents the escape of waste outside of the trench liner. A minimum of four feet of cover will be placed over the trench liner.
- 10. Upon completion of pit closure, Hess will reclaim the pit and trench location to a contour that approximates the original contour prior to construction.
- 11. Hess shall reseed the disturbed pit area to achieve a vegetative cover that equals 70% of the native perennial vegetative cover consisting of at least three native plant species, including at least one grass, but not including noxious weeds, and maintain that cover through two successive growing seasons.
- 12. Hess shall notify the District IV office when the temporary pit has been closed via a closure report on form C-144.

HESS CORPORATION DESIGN AND CONSTRUCTION PLAN TEMPORARY PITS

In accordance with 19.15.17.11 NMAC, the following information describes the design and construction of temporary pits on Hess Corporation locations.

- 1. Hess will design and construct a temporary pit to contain liquids and solids to prevent contamination of fresh water and to protect public health and the environment.
- 2. Prior to constructing the pit, topsoil will be stockpiled in the construction zone for later use in surface restoration.
- 3. Hess will install a barbed wire fence around each temporary pit. The fence will be either 3 or 4 strand barbed wire sufficient to keep livestock from entering the pit.
- 4. Hess shall construct the temporary pit so that the foundation and interior slope are firm and free of rocks, debris, sharp edges or irregularities to prevent liner failure.
- 5. Hess shall construct pit walls so that the slopes are no steeper than two horizontal feet to one vertical foot.
- 6. Hess shall line temporary pits with 20-mil, string reinforced LLDPE or equivalent liner, complying with EPA SW-846 method 9090A requirements.
- 7. Hess shall minimize liner seams. Temporary pit construction shall avoid excessive stress-strain on the liner.
- 8. Hess shall install a geotextile under the liner where needed to reduce localized stress-strain or protuberances that may otherwise compromise the liner's integrity.
- 9. Hess shall anchor the edges of the liner in the bottom of a compacted earth-filled trench at least 18 inches deep.
- 10. Hess shall protect the liner from fluid force or mechanical damage through the use of mud pit slides or a manifold system.
- 11. Hess shall protect the temporary pit from run-off by constructing and maintaining diversion ditches around the location and/or around the perimeter of the pit.
- 12. Hess will not allow the volume of the pit to exceed 10 acre-feet, including freeboard.
- 13. Hess will not allow any freestanding liquids to remain on any unlined portion of a temporary pit used to vent gas.

TEMPORARY PIT INSPECTION

Well	WBDGU 1830-191G	Liner Thickness	20 mil

				'	

All pits to be inspected DAILY during drilling/completion operations, WEEKLY thereafter. Any penetration of the pit liner shall be reported to the NMOCD within 48 hours.

MAINTENANCE AND OPERATING PLAN TEMPORARY PITS

In accordance with 19.15.17.12 NMAC, the following information describes the maintenance and operating plan for temporary pits on Hess Corporation locations.

- 1. Hess will discharge only fluids used or generated during the drilling, completion or workover process into a temporary pit.
- 2. Hess will maintain temporary pits free of miscellaneous solid waste or debris.
- Any hydrocarbon based drilling fluid generated during the drilling, completion or workover operations will be contained in an appropriate tank. Hess will remove any measureable layer of oil from the surface of a temporary drilling or workover pit.
- 4. Hess shall maintain at least two feet of freeboard for a temporary pit.
- 5. Hess will use a check list to perform a daily pit inspection while the drilling or workover rig is on-site. After drilling or workover operations, Hess will inspect the temporary pit weekly so long as liquids remain in the temporary pit. A log of the inspections will be kept in the local well file and be made available for the district office's review upon request. Hess will file a copy of the log with the District IV office upon the closure of the temporary pit.
- 6. Hess shall remove all free liquids from a temporary pit within 30 days from the date the drilling, completion or workover rig is released.

Drilling Pits

Mike.

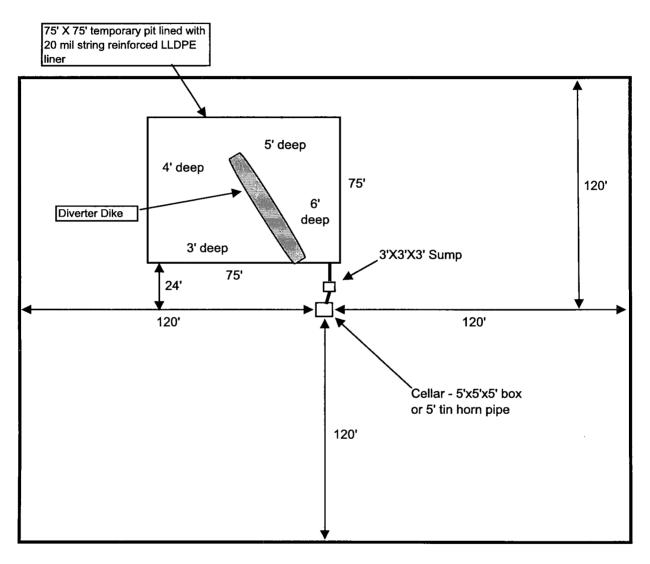

On Tuesday, we decided to change directions on how we will handle the pits on the new drilling wells. We are going back to each of them and removing the 60'x60' lined drying pad and will be building a 75' x 75' lined pit. As we did in 2007, our plans would be to bury the contents of the drilling pits onsite if the content tests prove to contain low chlorides. The contents of each pit will be sampled and sent to a lab for analysis. If contents contain low chlorides (which we expect them to be), the state will allow us to bury the contents on site using a deep trench burial method as we have done in the past. Basically, a deep trench would be dug adjacent to the reserve pit, the trench would be lined with 20 mil plastic and the reserve pit contents (including the original liner) would be moved into the lined trench. The plastic would then be wrapped up like a burrito and covered with at least 4 feet of soil. This method insures that we contain the drilling cuttings and won't have any plastic liner poking up out of the ground in future years. If the contents contain high chlorides, it will be hauled off to a permitted disposal site near Hobbs.

We plan to close these pits as soon as the drilling cuttings are dried and tested. After the well is completed, we will be vacuuming the water off the top of these pits to accelerate the drying time.

I wanted to advise you of this recent change in how we plan to manage drilling cuttings and be sure you are ok with this plan. Please advise. If you have any questions, please let me know. thanks,

Danny
