Dear Mr. Stogner:

Burlington Resources proposes to drill the above referenced well location as a commingled well in the Mesaverde and Dakota formations and is applying for administrative approval of an unorthodox gas well location for the Basin Dakota formation. The Mesaverde formation falls within a standard location. The well is optimally positioned for reservoir drainage of the Mesaverde formation, as shown on the attached drainage map. The Mesaverde formation accounts for 54% of reserves and the Dakota formation accounts for 46% of the reserves in this wellbore.

The subject well was staked 1550 feet FNL and 180 feet FWL due to archaeological sites to the south and east and geology within the legal spacing window for the Dakota formation, as shown on the attached aerial photography and topography map. This location also lies outside of the Participating Area for the Dakota formation.

The following attachments are for your review:

- Approved application for Permit to Drill and C-102 at referenced location
- Offset operators plat
- Topographic Map
- Aerial Photography Map
- Arch Site Maps
- Drainage Map

Copies of this application are being submitted to offset operator / working interest owners by certified mail. Please let me know if you have any questions about this application.

Sincerely,

Joni Clark  
Senior Regulatory Specialist
