Santa Fe, NM 87505

**RE: 2nd Semi Annual 2013 Groundwater Monitoring Report
DCP Eldridge Ranch Study Area (AP#-33)
Unit P, Section 21, Township 19 South, Range 37 East
Lea County, New Mexico**

Dear Mr. Lowe:

DCP Midstream, LP (DCP) is pleased to submit for your review, a one copy of the 2nd Semi Annual 2013 Results for the DCP Eldridge Study Area located near Monument, New Mexico (Unit P, Section 21, Township 19 South, Range 37 East).

Based on the historical analytical results, DCP would like to make a request to remove NMG MW-9, MW-J and MW-16 from the semiannual groundwater sampling program.

If you have any questions regarding the report, please call at 303-605-1718 or e-mail me swweathers@dcpmidstream.com .

Sincerely

DCP Midstream, LP

Stephen Weathers, P.G.
Principal Environmental Specialist

- A Historical Analytical Results
- B Laboratory Analytical Results

1. Introduction

This report summarizes groundwater monitoring and remediation activities conducted during the second half of 2013 at the Eldridge Ranch Pipeline Release (Site) in Lea County, New Mexico (Figure 1). Tasman Geosciences, LLC (Tasman) conducted these activities on behalf of DCP Midstream (DCP). The purpose of the field activities described herein were to determine the presence of light non-aqueous phase liquid (LNAPL) hydrocarbons, measure groundwater levels, obtain groundwater samples for chemical analysis and evaluate and present groundwater flow and quality conditions. Current Site conditions were evaluated from field data and groundwater analytical laboratory results collected on September 12 and 13, 2013.

2. Site Location and Background

The Site is located in New Mexico Oil Conservation Division (OCD) designated Unit P, Section 21, Township 19 South, Range 37 East, approximately 1 mile north and 3/4 of a mile east of the town of Monument in Lea County, New Mexico. The approximate coordinates are 32.642 degrees north and 103.256 degrees west. The surrounding area is predominantly uninhabited and used for ranching and oil and gas production and gathering. Approximately five underground pipelines traverse the Site (Figure 2).

The Site includes the former Eldridge Ranch property at the south and the former Huston property in the central portion, both of which are owned by DCP. The northern portion of the Site consists of land leased by DCP from the State of New Mexico. The Site spans more than a mile north to south over these three sections. For ease of discussion, the State of New Mexico property will be called the North Area, the Huston property will be called the Central Area, and the Eldridge Property will be called the South Area, as shown on Figure 2.

3. Groundwater Monitoring

This section describes the groundwater field and laboratory activities performed during the reporting period. Monitoring activities were conducted between September 12 and 13, 2013 and included Site-wide groundwater and LNAPL gauging and groundwater sampling. Figure 2 illustrates the groundwater monitoring network utilized to perform these activities at the Site.

3.1 Groundwater and LNAPL Elevation Monitoring

Groundwater and LNAPL levels were measured in order to evaluate hydraulic characteristics and provide information regarding seasonal and annual fluctuations in groundwater elevations at the Site. During the second half 2013, groundwater levels were measured at fifty-eight monitoring well locations.

During the September 2013 event, LNAPL was detected at monitoring wells MW-26, MW-27, and MW-CC with measured thicknesses of 0.74-feet, 0.68-feet, and 0.65-feet. Additionally, LNAPL was detected at monitoring well MW-N for the first time since June 2007, with a measured thickness of 0.51-feet. MW-N is located approximately 270-feet down-gradient MW-27. Groundwater elevations at the four wells with measured LNAPL were corrected for product thickness using an assumed LNAPL density of 0.75 grams per cubic centimeter. The corrected groundwater elevations were used to contour groundwater elevations at the site as illustrated on Figure 3.

Groundwater levels were measured on the north side of the well casing to the nearest 0.01-foot using an oil-water interface probe (IP). Measured groundwater levels are presented in Table 1. Groundwater level data were later converted to elevation (feet above mean sea level [AMSL]).

Groundwater elevation measurements collected during the reporting period as well as historical elevations are presented in Table 1, and a second half 2013 groundwater elevation contour map is provided as Figure 3. Groundwater elevations ranged from 3,587.60 feet AMSL at monitoring well MW-24 to 3,619.88 feet AMSL at monitoring well NMG MW-3. As illustrated on Figure 3, groundwater flow at the Site generally trends to the south/southeast with a gradient of approximately 0.0048 foot per foot between monitoring wells NMG MW-3 (North Area) and MW-24 (South Area).

3.2 Groundwater Quality Monitoring

Depth to groundwater, the presence of LNAPL, and total well depth (in wells without LNAPL) were measured within Site monitoring wells prior to collecting groundwater samples. A minimum of three well casing volumes of groundwater (calculated from total depth of the well and groundwater level measurements), were purged from the subject well prior to collecting groundwater samples.

Groundwater samples were collected using dedicated polyethylene bailers, placed in clean laboratory supplied containers for the selected analytical methods, packed in an ice-filled cooler and maintained at approximately four degrees Celsius ($^{\circ}\text{C}$) for transportation. Groundwater samples were then shipped under chain-of-custody procedures to Accutest Laboratories (Accutest) in Wheat Ridge, Colorado, for analysis. Water quality parameters were collected during the September 2013 sampling event. Site monitoring wells did not require collection of more than three purge volumes to achieve parameter stabilization. As such, the analytical data are considered to be representative of Site conditions in that a minimum 3 purge volumes were removed from all sampled monitoring wells during the second half 2013 semi-annual event. Water quality samples were submitted for analysis of benzene, toluene, ethylbenzene, and xylenes (BTEX) by United States Environmental Protection Agency (USEPA) Method 8260B.

Water quality samples were collected from forty-eight monitoring wells. Monitoring wells MW-26, MW-27, MW-CC, and MW-N were not sampled due to the presence of LNAPL.

Table 2 summarizes BTEX concentrations in groundwater samples collected during the second half 2013 event. A dissolved-phase benzene isoconcentration map is illustrated on Figure 4. Historical analytical

results up to and including the September 2013 event are contained in Appendix A. Laboratory analytical reports for the second half 2013 event are included in Appendix B. Results for the reporting period are summarized below.

- Benzene was detected in twenty-one of the sampled monitoring wells. Detected concentrations ranged from 0.00027 milligrams per liter (mg/L) in the House Well to 8.27 mg/L in MW-O. A total of nine monitoring wells (MW-11, MW-12, MW-23, MW-M, MW-O, MW-Q, MW-EE, MW-LL, and NMG MW-10) exhibited benzene concentrations in exceedance of the New Mexico Water Quality Control Commission (NMWQCC) groundwater standard.
- Ethylbenzene was detected in eighteen monitoring wells during the second half 2013 semi-annual sampling event with concentrations ranging from 0.00034 mg/L in NMG MW-6, to 0.268 mg/L in MW-12. Total xylenes were detected in eight monitoring wells with concentrations ranging from 0.0021 mg/L in MW-EE, to 0.22 mg/L in MW-4. Concentrations did not exceed the NMWQCC groundwater standard for ethylbenzene (0.75 mg/L) or total xylenes (0.62 mg/L) at any sample location.

Table 2 summarizes BTEX concentrations in groundwater samples collected during the second half 2013 event. Laboratory analytical report for the event is included in Appendix B, and a dissolved-phase benzene isoconcentration map is illustrated on Figure 4.

3.3 Data Quality Assurance / Quality Control

The data were reviewed for compliance with the analytical method and the associated quality assurance/quality control (QA/QC) procedures. All samples were analyzed using the correct analytical methods and within the correct holding times. Chain of custody forms were in order and properly executed and indicate that samples were received at the proper temperature with no headspace. All data were reported using the correct method number and reporting units. A trip blank, matrix spike or matrix spike duplicate (MS/MSD) and three field duplicate samples from wells MW-12, NMG MW-10, and the Irrigation Well were collected during the sampling event. The trip blank was fully in control, having no detections of targets.

Duplicate samples collected at MW-12 (DUP A), NMG MW-10 (DUP B), and the Irrigation Well (DUP C) were in compliance with QA/QC standards. MW-12 and duplicate sample returned results for benzene of 3.29 mg/L and 3.83 mg/L. NMG MW-10 and duplicate sample returned results for benzene of 0.179 mg/L and 0.177 mg/L. Benzene concentrations in the Irrigation Well and duplicate sample returned results for benzene of 0.0027 mg/L and 0.0036 mg/L.

The overall QA/QC assessment of the data, based on the data review, indicate that both field precision and overall data precision and accuracy are acceptable.

4. Remediation Activities

Active LNAPL remediation and passive dissolved phase petroleum hydrocarbon remediation activities were conducted during the second half 2013 as described in the following Sections.

4.1 Vacuum Enhanced LNAPL Recovery

During the second half 2013, Tasman conducted two vacuum enhanced LNAPL recovery events at monitoring wells MW-26, MW-27, and MW-CC. On September 12, 2013 vacuum was applied to MW-27 and MW-CC simultaneously for 4 hours and approximately 35 barrels of mixed liquids was removed. Vacuum was also applied to MW-26 for 4 hours during the September event and approximately 20 barrels of mixed liquids was removed. On December 3, 2013 vacuum was again applied to monitoring wells MW-27 and MW-CC simultaneously for 4 hours and approximately 60 barrels of mixed liquids was removed. Vacuum was then applied to MW-26 for 4 hours and approximately 18 barrels of mixed liquids was removed. The recovered volume from both LNAPL recovery events was transported to the Cooper Disposal Facility in Hobbs, New Mexico.

4.2 Monitored Natural Attenuation

Monitored natural attenuation (MNA) remains an effective passive remediation strategy to address the dissolved phase petroleum hydrocarbon plumes on Site. Monitoring wells NMG MW-13, MW-30, MW-31, MW-19, MW-17, and MW-24, which serve as point of compliance wells along the southern and eastern plume boundaries, continue to exhibit BTEX concentrations below laboratory detection limits in the North, Central, and South areas, respectively. Historic and second half 2013 semi-annual analytical data suggests that natural attenuation continues to provide effective remediation of residual dissolved phase hydrocarbon concentrations on-Site.

5. Conclusions

Although benzene concentrations exceeded regulatory standards in ten of the forty-eight sample locations during the September 2013 monitoring event, BTEX concentrations continue to decrease Site-wide. The analytical data from the second half 2013 sampling event concludes the following observations, by area, as described below:

NORTH AREA

- Seven of the ten wells in the North Area exhibited constituent concentrations below laboratory detection limits during the second half 2013 semi-annual event.
- Benzene concentrations observed in monitoring well NMG MW-7 decreased to below regulatory standards for the first time since initial detection in 2010.
- Although elevated benzene concentrations persist in NMG MW-10, point of compliance wells located down-gradient continue to return non-detect BTEX results indicating the dissolved phase hydrocarbon plume is not advancing.

CENTRAL AREA

- Benzene concentrations remain the highest in the Central Area of the Site. Fourteen of the wells in the Central Area exhibited constituent concentrations below laboratory detection limits during the second half 2013 semi-annual event.
- Measurable free phase hydrocarbons persist in monitoring wells MW-26, MW-27, and MW-CC in the central area.
- Measurable free phase hydrocarbons were observed in well MW-N during the second half 2013 semi-annual event for the first time with a measured thickness of 0.51-feet.
- BTEX concentrations in point of compliance wells MW-19, MW-30, MW-31, and MW-F located east of the plume boundary remain below laboratory detection limits demonstrating there is no lateral movement of the free and dissolved phase petroleum hydrocarbon plumes.

SOUTH AREA

- During the second half 2013 monitoring event, BTEX concentrations were below NMWQCC regulatory standards at all sample locations in the South Area.
- Constituent concentrations in boundary well MW-24 remain below laboratory detection limits indicating the dissolved and free phase hydrocarbon plumes are not advancing off Site.

6. Recommendations

Based on evaluation of second half 2013 and historical Site observations and monitoring results, the following recommendations have been developed for future activities:

- Continue quarterly vacuum enhanced fluid recovery events to address the presence of LNAPL at wells MW-26, MW-27, and MW-CC. Initiate vacuum enhanced LNAPL recovery at well MW-N during the first quarter 2014.
- Installation of a passive LNAPL collection bailer at MW-N to address the newly detected free phase hydrocarbons advancing down-gradient.
- Continue semi-annual groundwater monitoring at all monitoring well locations currently on the Site sampling plan, with the exception of those described below.
- Remove monitoring wells MW-J, NMG MW-9, and MW-16 from the Site sampling plan. Dissolved BTEX concentrations have not been detected in MW-J since December 2006, and MW-18 and MW-19 are located downgradient of this well. Dissolved BTEX concentrations have not been detected in NMG MW-9 since the June 2008 sampling event, and NMG MW-11 and NMG MW-13 are located downgradient. Dissolved BTEX concentrations have not been detected in MW-16 since March 2007, and the downgradient location of MW-17 would continue to provide delineation in this localized area.

NMG MW13	9/12/2013	25.63			27.73	3636.64	3611.01	-0.17
Average change in groundwater elevation since the previous monitoring event								-0.08

Notes:

1- Depths measured from the north edge of the well casing.

2- Total depths were collected and recorded during the second half semi-annual 2013 monitoring event.

3- Changes in groundwater elevation calculated by subtracting the measurement collected during the previous monitoring even from the measurement collected during the most recent monitoring event.

Data presented for all well locations includes previous four sampling events, when available.

* Groundwater elevation was corrected for product thickness using the following calculation:

Groundwater elevation = (TOC Elevation - Measured Depth to Water) + (LNAPL Thickness in Well * LNAPL Density)

LNAPL density was assumed to be approximately 0.75 grams per cubic centimeter

Notes:

The environmental cleanup standards for water that are applicable to the site are the New Mexico Water Quality Control Commission (NMWQCC) Groundwater Standards. Data presented for all well locations includes previous four sampling events, when available. Historic groundwater analytical results for these locations may be found in Appendix A. Bold red values indicate an exceedance of the NMWQCC groundwater standards for the Site.

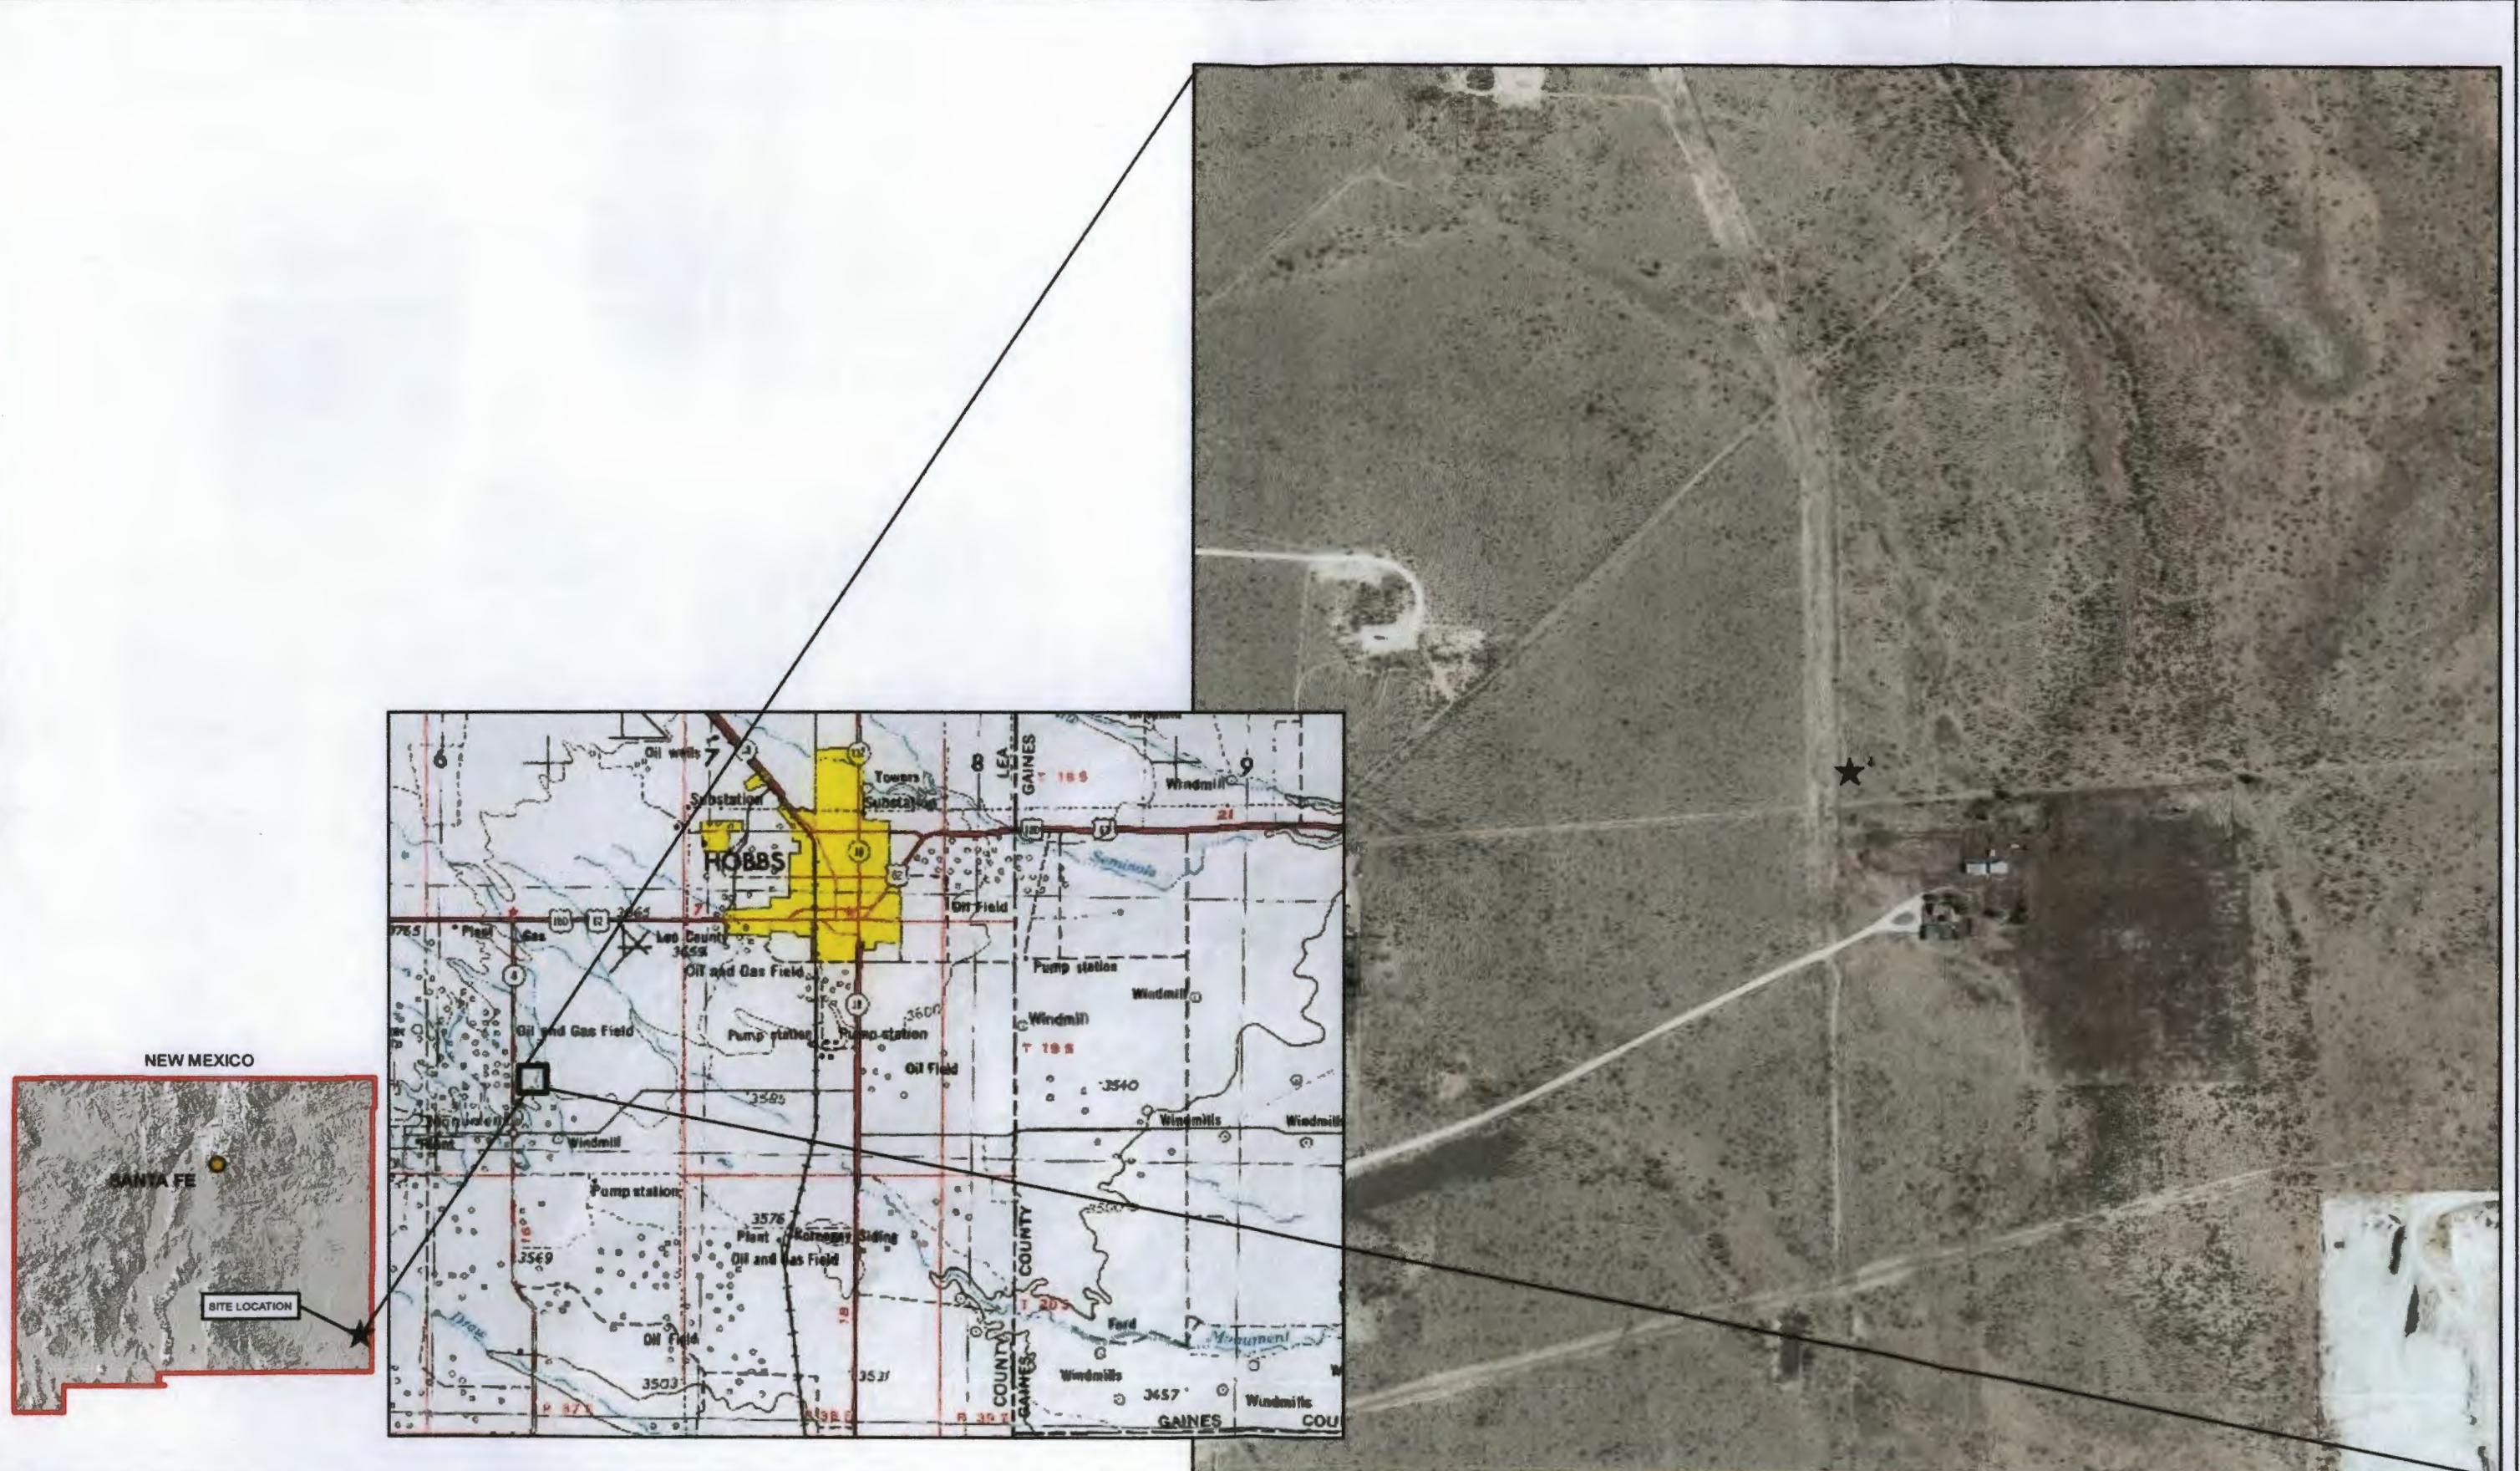

Sample locations are shown on Figure 2 and analytical results are illustrated on Figure 4.

LNAPL = Light Non-Aqueous Phase Liquid

NS = Not Sampled.

mg/L = milligrams per liter.

MW-NMG-9	9/15/2010	<0.00030	<0.0010	<0.00030	-	
MW-NMG-9	4/26/2011	<0.00030	<0.0010	<0.00030	<0.00060	

Notes:
The environmental cleanup standards for water that are applicable to the site are the New Mexico Water Quality Control Commission (NMWQCC) Groundwater Standards.

Bold values indicate an exceedance of the NMWQCC groundwater standards for the Site.

LNAPL = Light Non-Aqueous Phase Liquid

NS = Not Sampled.

mg/L = milligrams per liter.

Technical Report for

DCP Midstream, LP

TASMCOA:Eldridge

RC-GN00-390362060

Accutest Job Number: D50542

Sampling Dates: 09/12/13 - 09/13/13

Report to:

**Tasman Geosciencec LLC
6899 Pecos Street Unit C
Denver, CO 80221
swweathers@dcpmidstream.com; jimdawe@tasman-geo.com;
cwasko@tasman-geo.com
ATTN: Jim Dawe**

Total number of pages in report: 109

Test results contained within this data package meet the requirements of the National Environmental Laboratory Accreditation Conference and/or state specific certification programs as applicable.

A handwritten signature in black ink that appears to read "Scott Heideman".

**Scott Heideman
Laboratory Director**

Client Service contact: Shea Greiner 303-425-6021

Certifications: CO (CO00049), ID, NE (CO00049), ND (R-027), NJ (CO 0007), OK (D9942), UT (NELAP CO00049), TX (T104704511)

This report shall not be reproduced, except in its entirety, without the written approval of Accutest Laboratories.
Test results relate only to samples analyzed.

CASE NARRATIVE / CONFORMANCE SUMMARY

Client: DCP Midstream, LP

Job No D50542

Site: TASCOA:Eldridge

Report Date 9/23/2013 11:29:56 AM

On 09/14/2013, 51 sample(s), 1 Trip Blank(s), and 0 Field Blank(s) were received at Accutest Mountain States (AMS) at a temperature of 2.1 °C. The samples were intact and properly preserved, unless noted below. An AMS Job Number of D50542 was assigned to the project. The lab sample ID, client sample ID, and date of sample collection are detailed in the report's Results Summary.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix AQ	Batch ID: V6V1158
------------------	--------------------------

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) D50542-17MS, D50542-17MSD were used as the QC samples indicated.

Matrix AQ	Batch ID: V6V1159
------------------	--------------------------

- All samples were analyzed within the recommended method holding time.
- Sample(s) D50542-18MS, D50542-18MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

Matrix AQ	Batch ID: V6V1160
------------------	--------------------------

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) D50542-32MS, D50542-32MSD were used as the QC samples indicated.

Matrix AQ	Batch ID: V6V1161
------------------	--------------------------

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) D50589-4DUP, D50598-2MS were used as the QC samples indicated.

Matrix AQ	Batch ID: V7V1249
------------------	--------------------------

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) D50493-1MS, D50493-2DUP were used as the QC samples indicated.

Matrix AQ	Batch ID: V7V1250
------------------	--------------------------

- All samples were analyzed within the recommended method holding time.
- Sample(s) D50410-3MS, D50410-3MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

Matrix AQ	Batch ID: V7V1251
------------------	--------------------------

- All samples were analyzed within the recommended method holding time.
- Sample(s) D50493-5MS, D50493-6DUP, D50493-5MS were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- The matrix spike (MS) recovery(s) of Benzene, Ethylbenzene, Toluene, Xylene (total) are outside control limits. Outside control limits due to possible matrix interference.

Volatiles by GCMS By Method SW846 8260B

Matrix AQ

Batch ID: V7V1256

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) D50690-3DUP, D50690-8MS were used as the QC samples indicated.
- D50690-8MS: The pH of the sample aliquot for VOA analysis was >2 at time of analysis.

AMS certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting AMS's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

AMS is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. This report is authorized by AMS indicated via signature on the report cover.

Accutest Laboratories Sample Receipt Summary

Accutest Job Number: D50542

Client: TASMAN GEOSCIENCES.

Immediate Client Services Action Required: No

Date / Time Received: 9/14/2013 11:00:00 AM

No. Coolers:

1

Client Service Action Required at Login: No

Project: ELDRIDGE

Airbill #'s: FedEx

Cooler SecurityY or N

- | | | | | | |
|---------------------------|-------------------------------------|--------------------------|-----------------------|-------------------------------------|--------------------------|
| 1. Custody Seals Present: | <input checked="" type="checkbox"/> | <input type="checkbox"/> | 3. COC Present: | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| 2. Custody Seals Intact: | <input checked="" type="checkbox"/> | <input type="checkbox"/> | 4. Smpl Dates/Time OK | <input checked="" type="checkbox"/> | <input type="checkbox"/> |

Cooler TemperatureY or N

1. Temp criteria achieved:
 2. Cooler temp verification: Infared gun
 3. Cooler media: Ice (bag)

Quality Control PreservationY or N

N/A

1. Trip Blank present / cooler:
 2. Trip Blank listed on COC:
 3. Samples preserved properly:
 4. VOCs headspace free:

Sample Integrity - DocumentationY or N

1. Sample labels present on bottles:
 2. Container labeling complete:
 3. Sample container label / COC agree:

Sample Integrity - ConditionY or N

1. Sample recvd within HT:
 2. All containers accounted for:
 3. Condition of sample: Intact

Sample Integrity - InstructionsY or N

N/A

1. Analysis requested is clear:
 2. Bottles received for unspecified tests:
 3. Sufficient volume rec'd for analysis:
 4. Compositing instructions clear:
 5. Filtering instructions clear:
