RE: Quatro Osos E&P, LLC's Supplemental information to be attached to the Application for Surface Comingling Diverse Ownership and Central Tank Battery for its Diablo wells, Chaves County, NM

Dear Mr. McMillian:

Your telephone call requesting clarification to our application is greatly appreciated.

While the application does state that we intend to install one 210 Barrel steel above ground storage tank as the receipt point for production testing individual wells via a valve controlled flow line header wherein each well in the field (total 17 wells) can be isolated from the other 16 wells and have its flow directed to that 210 barrel test tank. I failed to include that we will also be moving the product through a production test meter to confirm and verify the gauging of the 210 barrel tank ultimately to determine the volume of production over a measured time.

Once the production volume measurements are accomplished, we will engage an electrical centrifugal pump to transfer the test product from the 210 barrel test tank to the gunbarrel to separate produced water from salable product which will then gravity flow into our proposed 500 barrel product storage tank.

Additional clarification is that the test meter will be one of two meters installed. The primary meter will measure all product going through the flowline header at all times. Only when a test of a well is being performed will the test meter be engaged.

My hope is that the description provide clarifies our intentions.

Regards, Quatro Osos, E&P, LLC

Rory McMinn, Managing Member
