RE: Request to Administratively Amend Surface Commingling Authority
AB 647 State Battery
Eddy County, New Mexico

Director Riley:

Apache respectfully requests administrative approval to surface commingle the AB 647 State and the AA State leases at the AB 647 State Battery.

Proposal:

Apache proposes to allocate production between the following wells based on frequent and periodic well tests:

- AA State 1 API: 30-015-01657

- AB 647 State 1 API: 30-015-39927
- AB 647 State 2 API: 30-015-41500
- AB 647 State 3 API: 30-015-41501
- AB 647 State 4 API: 30-015-41505
- AB 647 State 5 API: 30-015-41502
- AB 647 State 6 API: 30-015-41503
- AB 647 State 7 API: 30-015-41491
- AB 647 State 8 API: 30-015-41492
- AB 647 State 9 API: 30-015-41493
- AB 647 State 10 API: 30-015-41494
- AB 647 State 11 API: 30-015-41495
- AB 647 State 12 API: 30-015-41496
- AB 647 State 13 API: 30-015-41497
- AB 647 State 14 API: 30-015-41498
- AB 647 State 15 API: 30-015-41504
- AB 647 State 16 API: 30-015-41511

This commingling request is the most effective, economic means of producing the reserves and will not result in reduced royalty or improper measurement of production. The proposed commingling will reduce operating expenses by combining the AA State 1 and the AB 647 State wells.

Measurement:

The AB 647 State central tank battery is located in Sec 32, T17S, R28E. The existing AB 647 State production will flow through two dedicated vessels. A three phase metering separator (to test cumulative production) or a three phase metering tester (to test wells individually) will be utilized to test each well's production separately to fairly allocate oil and gas production on a pro-rata share. Wells will be rotated through the metering tester a regular basis. The aforementioned separator and tester will be equipped with a turbine meter for oil measurement, turbine meter for water measurement, and a differential pressure/orifice plate meter for gas measurement. VRU gas volumes will be measured with a differential pressure/orifice plate meter and volumes will be allocated back to each well utilizing a percentage of each wells monthly oil production.

The AA State 1 production will flow through dedicated three phase test separator. The separator will be equipped with a turbine meter for oil measurement, turbine meter for water measurement, and a differential pressure/orifice plate meter for gas measurement. VRU gas volumes will be measured with a differential pressure/orifice plate meter and volumes will be allocated back to each well utilizing a percentage of each wells monthly oil production.

Please find the proposed Facility layout attached.
