- Hilcorp Operated Pipeline
- Harvest Operated Pipeline

Hancock CDP connects 2 wells to the Harvest system. An existing Hilcorp operated pipeline connects the Hancock CDP to the Mudge CDP, and the valve between the two CDPs is currently closed. Hilcorp proposes to open this valve, and divert the Hancock CDP wells to the Mudge CDP. The Hancock CDP compressor will be removed. No pipeline work is required.

## Mudge CDP

### *Proposed Allocation Procedure*

Each well will be individually metered using allocation meters. Total gas production will then be metered using a CDP sales meter. Production shall then be allocated to each well using the CDP sales meter volume, allocation meter volumes, on-lease fuel usage, purged or vented gas volumes, BTU and other data, in accordance with the allocation formula contained within the application.

#### Base Data:

W = Gas Volume (Mcf) from allocation meters at individual wells during allocation period

X = Gas Volume (Mcf) from CDP Sales Meter during allocation period

Y = BTU's from CDP Sales Meter during allocation period

Allocation Period is typically a calendar month and will be the same for all wells.

1. Individual Well Gas Production = A + B + C + D + E

A = Allocated Sales Volume, Mcf =  $(W / \text{SUM } W) \times X$   
(individual well volume divided by the sum of the well volumes; multiplied by total from CDP)

B = On lease fuel usage, Mcf. Determined from equipment specifications and operating conditions.

C = Purged and/or vented gas from well and/or lease equipment, Mcf. Calculated using equipment specifications and pressures.

D = Allocated fuel from gathering system equipment. The total fuel required to operate gathering system equipment will be allocated to the individual wells benefiting from the equipment using allocation factors determined by  $W / \text{SUM } W$  for the wells involved.

E = Allocated volume of gas lost and/or vented from the gathering system and/or gathering system equipment, Mcf. The total volume will be determined using industry accepted procedures for the conditions existing at the time of the loss. All volumes corresponding to liquid condensation within the gathering system will also be determined. The total volume lost and/or vented will be allocated to the individual wells affected using factors determined by  $W / \text{SUM } W$ .

2. Allocated Individual Well BTU's =  $((W \times \text{Individual well BTU} / \text{SUM } (@ \times \text{individual well BTU})) \times Y$ .  
Individual well gas heating values to be determined in accordance with BLM regulations (currently Onshore Order #5).
