Production estimates are average of first 6 month volumes or most recent NMOC reported data.

Process Description:

For each Facility Train, production is sent through a 10' X 40' three-phase production separator. Oil production flows through two line heaters then to an 8' X 20' heater treater before being sent to a 4' vapor recovery tower. It then flows to four oil storage tanks before being pumped through a LACT meter S/N*, which will serve as the FMP for BLM royalty payments (Lat 32.260919 Long - 103.761808). A truck load FMP will be set up at the Facility for use as back-up in the event of a LACT meter failure.

Oil production will be allocated back to each well based on well test. For testing purposes, each Train will be equipped with three permanent 6' x 20' three-phase test separators. Each test vessel will be equipped with oil turbine meters (S/N*), gas orifice meters (S/N*) and water turbine meters. In addition, each Train is equipped to add up to three portable 6' X 20' three-phase test separators. Any portable test separator will be equipped with an oil turbine meter (S/N*), gas orifice meter (S/N*) and water turbine meter.

All wells will be tested daily prior to Range 1 of decline, and will be tested at least three times per month during Range 1 of decline. When Range 2 decline is started, the wells will be tested at least twice per month. Wells will be tested at least once per month when Range 3 of decline is started, as specified in Hearing Order R-14299.

*Meter number to be submitted upon installation. The oil and gas meters will be calibrated on a regular basis per API, NMOCD and BLM specifications.

Gas production from all wells at each Train will be combined after the production and test separators. It will then flow through an orifice meter S/N* (Lat 32.260919 Long -103.761808), which will serve as the gas FMP for that Train for the purpose of royalty payment, then sent to sales.

All water from the Platinum Battery will be sent to the Sand Dunes Water Disposal System.

*Meter number to be submitted upon installation. The oil and gas meters will be calibrated on a regular basis per API, NMOCD and BLM specifications.

Additional Application Components:

The flow of production is shown in detail on the enclosed facility diagram. Also enclosed is a map detailing the lease boundaries, well and battery locations.

Pursuant to Statewide rule 19.15.12.10(C)(4)(g) OXY USA INC requests the option to include additional pools or leases within the defined parameters set forth in the Order for future additions.

Commingling this production is the most effective means of producing the reserves. The surface commingle application will be submitted separately for approval per NMOCD and BLM regulations.

OXY USA INC understands the requested approval will not constitute the granting of any right-of-way or construction rights not granted by the lease instrument.
