Circulating valve on the back of the water tank had frozen and ruptured.					
Describe Area Affected and Cleanup Action Taken.*					
Visibly impacted soil was removed from an area measuring approximately 45' x 110' and disposed at an NMOCD approved facility. Soil samples were collected from the excavation until all TPH and chloride concentrations were reported below the NMOCD remediation standards. Excavated soil was disposed at an NMOCD approved disposal facility. Figures are attached that show the site location, the tank battery and sample point locations (Fig #1 through Fig #3). Laboratory data and chain of custody documentation is also attached.					
I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
