Subject: Turner B 80 & 87 Remediation

Terry: Just a quick update on the Turner B 80 and 87 flowline release sites.

1. We have placed a one call for both sites.
2. We will start excavation of the spill area on the Turner B 80 on Wednesday, September 7, 2011. Soils will be staged onto plastic at the adjoining location to the northwest.
3. Though I do not have your stipulations on the Turner B 87, per our conversation I looked at the feasibility of vacuuming the soils from that narrow section of the arroyo. I regret that I could not find suitable equipment to perform this task. However, I have secured a 12" trenching bucket and have confirmed from my on site personnel that we can straddle the drainage channel and remove the impacts at the bottom with a minimum amount of disturbance to the sidewalls which was one of my major concerns. Though this will be a slow and surgical process, it should be able to meet both of our goals. I will be updating and resubmitting the CAP to reflect this change, then await your stipulations before starting this site.

Respectfully:

Fred Holmes
